#	ARTICLE	IF	CITATIONS
1	Elevated serum uric acid is associated with a greater inflammatory response and with short- and long-term mortality in patients with ST-segment elevation myocardial infarction undergoing primary percutaneous coronary intervention. <i>Nutrition, Metabolism and Cardiovascular Diseases</i> , 2021, 31, 608-614.	1.1	22
2	Neutrophil to platelet ratio: A novel prognostic biomarker in ST-elevation myocardial infarction patients undergoing primary percutaneous coronary intervention. <i>European Journal of Preventive Cardiology</i> , 2020, 27, 2338-2340.	0.8	17
3	Reduced Cardio-Renal Function Accounts for Most of the In-Hospital Morbidity and Mortality Risk Among Patients With Type 2 Diabetes Undergoing Primary Percutaneous Coronary Intervention for ST-Segment Elevation Myocardial Infarction. <i>Diabetes Care</i> , 2019, 42, 1305-1311.	4.3	15
4	Serum uric acid may modulate the inflammatory response after primary percutaneous coronary intervention in patients with ST-elevation myocardial infarction. <i>Journal of Cardiovascular Medicine</i> , 2020, 21, 337-339.	0.6	14
5	Elevated serum uric acid is a predictor of contrast associated acute kidney injury in patient with ST-segment elevation myocardial infarction undergoing primary percutaneous coronary intervention. <i>Nutrition, Metabolism and Cardiovascular Diseases</i> , 2021, 31, 2140-2143.	1.1	12
6	Short Pâ€Wave Duration is a Marker of Higher Rate of Atrial Fibrillation Recurrences after Pulmonary Vein Isolation: New Insights into the Pathophysiological Mechanisms Through Computer Simulations. <i>Journal of the American Heart Association</i> , 2021, 10, e018572.	1.6	10
7	Acute kidney injury and in-hospital mortality in patients with ST-elevation myocardial infarction of different age groups. <i>International Journal of Cardiology</i> , 2021, 344, 8-12.	0.8	10
8	Has hyperglycemia a different prognostic role in STEMI patients with or without diabetes?. <i>Nutrition, Metabolism and Cardiovascular Diseases</i> , 2021, 31, 528-531.	1.1	9
9	Comparison of Outcomes of Staged Complete Revascularization Versus Culprit Lesionâ€Only Revascularization for ST-Elevation Myocardial Infarction and Multivessel Coronary Artery Disease. <i>American Journal of Cardiology</i> , 2017, 119, 508-514.	0.7	8
10	Long-term percentage of ventricular pacing in patients requiring pacemaker implantation after transcatheter aortic valve replacement: A multicenter 10-year experience. <i>Heart Rhythm</i> , 2020, 17, 1897-1903.	0.3	6
11	Leptin affects the inflammatory response after STEMI. <i>Nutrition, Metabolism and Cardiovascular Diseases</i> , 2020, 30, 922-924.	1.1	4
12	Peripheral Artery Disease in Diabetes Mellitus: Focus on Novel Treatment Options. <i>Current Pharmaceutical Design</i> , 2020, 26, 5953-5968.	0.9	4
13	Incidence of Ventricular Arrhythmias and 1â€Year Predictors of Mortality in Patients Treated With Implantable Cardioverterâ€Defibrillator Undergoing Generator Replacement. <i>Journal of the American Heart Association</i> , 2021, 10, e018090.	1.6	3
14	Serum uric acid in patients with ST-segment elevation myocardial infarction: An innocent bystander or leading actor?. <i>Nutrition, Metabolism and Cardiovascular Diseases</i> , 2022, 32, 1583-1589.	1.1	3
15	Smokerâ€™s paradox in ST-elevation myocardial infarction: Role of inflammation and platelets. <i>Hellenic Journal of Cardiology</i> , 2019, 60, 397-399.	0.4	2
16	New Drugs and Interventional Strategies for the Management of Hypertension. <i>Current Pharmaceutical Design</i> , 2021, 27, 1396-1406.	0.9	1
17	The unfavourable inflammatory response in elderly patients after myocardial infarction: should we talk of â€dysflammingâ€™?. <i>Journal of Cardiovascular Medicine</i> , 2020, 21, 340-342.	0.6	1
