| #  | Article                                                                                                                                                                                                                        | IF   | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | A Lowâ€Power CuSCN Hydrogen Sensor Operating Reversibly at Room Temperature. Advanced Functional<br>Materials, 2022, 32, 2102635.                                                                                              | 7.8  | 8         |
| 2  | A Triâ€Channel Oxide Transistor Concept for the Rapid Detection of Biomolecules Including the SARSâ€CoVâ€2 Spike Protein. Advanced Materials, 2022, 34, e2104608.                                                              | 11.1 | 19        |
| 3  | Damp heat–stable perovskite solar cells with tailored-dimensionality 2D/3D heterojunctions. Science, 2022, 376, 73-77.                                                                                                         | 6.0  | 366       |
| 4  | Efficient and stable perovskite-silicon tandem solar cells through contact displacement by MgF <i><sub>x</sub> </i> . Science, 2022, 377, 302-306.                                                                             | 6.0  | 141       |
| 5  | Rapid and up-scalable manufacturing of gigahertz nanogap diodes. Nature Communications, 2022, 13, .                                                                                                                            | 5.8  | 11        |
| 6  | Lithiumâ€lon Desolvation Induced by Nitrate Additives Reveals New Insights into High Performance<br>Lithium Batteries. Advanced Functional Materials, 2021, 31, 2101593.                                                       | 7.8  | 100       |
| 7  | Efficient Hybrid Amorphous Silicon/Organic Tandem Solar Cells Enabled by Nearâ€Infrared Absorbing<br>Nonfullerene Acceptors. Advanced Energy Materials, 2021, 11, 2100166.                                                     | 10.2 | 5         |
| 8  | A universal solution processed interfacial bilayer enabling ohmic contact in organic and hybrid optoelectronic devices. Energy and Environmental Science, 2020, 13, 268-276.                                                   | 15.6 | 40        |
| 9  | Novel wide-bandgap non-fullerene acceptors for efficient tandem organic solar cells. Journal of<br>Materials Chemistry A, 2020, 8, 1164-1175.                                                                                  | 5.2  | 39        |
| 10 | Colossal Tunneling Electroresistance in Coâ€Planar Polymer Ferroelectric Tunnel Junctions. Advanced<br>Electronic Materials, 2020, 6, 1901091.                                                                                 | 2.6  | 14        |
| 11 | 100 GHz zinc oxide Schottky diodes processed from solution on a wafer scale. Nature Electronics, 2020, 3, 718-725.                                                                                                             | 13.1 | 45        |
| 12 | Long-range exciton diffusion in molecular non-fullerene acceptors. Nature Communications, 2020, 11, 5220.                                                                                                                      | 5.8  | 204       |
| 13 | A Multilayered Electron Extracting System for Efficient Perovskite Solar Cells. Advanced Functional<br>Materials, 2020, 30, 2004273.                                                                                           | 7.8  | 17        |
| 14 | Lowâ€Voltage Heterojunction Metal Oxide Transistors via Rapid Photonic Processing. Advanced<br>Electronic Materials, 2020, 6, 2000028.                                                                                         | 2.6  | 25        |
| 15 | Colloidal Quantum Dot Photovoltaics Using Ultrathin, Solution-Processed Bilayer<br>In <sub>2</sub> 0 <sub>3</sub> /ZnO Electron Transport Layers with Improved Stability. ACS Applied<br>Energy Materials, 2020, 3, 5135-5141. | 2.5  | 13        |
| 16 | 17.1% Efficient Singleâ€Junction Organic Solar Cells Enabled by nâ€Type Doping of the Bulkâ€Heterojunction.<br>Advanced Science, 2020, 7, 1903419.                                                                             | 5.6  | 173       |
| 17 | 17% Efficient Organic Solar Cells Based on Liquid Exfoliated WS <sub>2</sub> as a Replacement for PEDOT:PSS. Advanced Materials, 2019, 31, e1902965.                                                                           | 11.1 | 500       |
| 18 | Enhancing the Charge Extraction and Stability of Perovskite Solar Cells Using Strontium Titanate<br>(SrTiO <sub>3</sub> ) Electron Transport Layer. ACS Applied Energy Materials, 2019, 2, 8090-8097.                          | 2.5  | 51        |

| #  | Article                                                                                                                                                                                                                           | IF   | CITATIONS |
|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 19 | Use of the Phenâ€NaDPO:Sn(SCN) <sub>2</sub> Blend as Electron Transport Layer Results to Consistent<br>Efficiency Improvements in Organic and Hybrid Perovskite Solar Cells. Advanced Functional Materials,<br>2019, 29, 1905810. | 7.8  | 41        |
| 20 | Lightâ€Emitting Transistors Based on Solutionâ€Processed Heterostructures of Selfâ€Organized<br>Multipleâ€Quantumâ€Well Perovskite and Metalâ€Oxide Semiconductors. Advanced Electronic Materials,<br>2019, 5, 1800985.           | 2.6  | 18        |
| 21 | Hybrid organic–metal oxide multilayer channel transistors with high operational stability. Nature<br>Electronics, 2019, 2, 587-595.                                                                                               | 13.1 | 49        |
| 22 | Charge and Triplet Exciton Generation in Neat PC <sub>70</sub> BM Films and Hybrid<br>CuSCN:PC <sub>70</sub> BM Solar Cells. Advanced Energy Materials, 2019, 9, 1802476.                                                         | 10.2 | 20        |
| 23 | F-Substituted oligothiophenes serve as nonfullerene acceptors in polymer solar cells with open-circuit voltages >1 V. Journal of Materials Chemistry A, 2018, 6, 9368-9372.                                                       | 5.2  | 21        |
| 24 | Highâ€Efficiency Fullerene Solar Cells Enabled by a Spontaneously Formed Mesostructured<br>CuSCNâ€Nanowire Heterointerface. Advanced Science, 2018, 5, 1700980.                                                                   | 5.6  | 19        |
| 25 | Additiveâ€Morphology Interplay and Loss Channels in "Allâ€Smallâ€Molecule―Bulkâ€heterojunction (BHJ)<br>Solar Cells with the Nonfullerene Acceptor IDTTBM. Advanced Functional Materials, 2018, 28, 1705464.                      | 7.8  | 40        |
| 26 | Charge Photogeneration and Recombination in Mesostructured CuSCNâ€Nanowire/PC <sub>70</sub> BM<br>Solar Cells. Solar Rrl, 2018, 2, 1800095.                                                                                       | 3.1  | 9         |
| 27 | Solutionâ€Processed In <sub>2</sub> O <sub>3</sub> /ZnO Heterojunction Electron Transport Layers for<br>Efficient Organic Bulk Heterojunction and Inorganic Colloidal Quantumâ€Dot Solar Cells. Solar Rrl,<br>2018, 2, 1800076.   | 3.1  | 34        |
| 28 | Large-area plastic nanogap electronics enabled by adhesion lithography. Npj Flexible Electronics, 2018, 2, .                                                                                                                      | 5.1  | 29        |
| 29 | pâ€Doping of Copper(I) Thiocyanate (CuSCN) Holeâ€Transport Layers for Highâ€Performance Transistors and<br>Organic Solar Cells. Advanced Functional Materials, 2018, 28, 1802055.                                                 | 7.8  | 50        |
| 30 | Sub-second photonic processing of solution-deposited single layer and heterojunction metal oxide thin-film transistors using a high-power xenon flash lamp. Journal of Materials Chemistry C, 2017, 5, 11724-11732.               | 2.7  | 37        |
