#	ARTICLE	IF	CITATIONS
1	The inhibitory effect of manganese on acetylcholinesterase activity enhances oxidative stress and neuroinflammation in the rat brain. <i>Toxicology</i> , 2012, 292, 90-98.	2.0	93
2	Protective effects of ebselen (Ebs) and para-aminosalicylic acid (PAS) against manganese (Mn)-induced neurotoxicity. <i>Toxicology and Applied Pharmacology</i> , 2012, 258, 394-402.	1.3	41
3	Urinary delta-ALA: A potential biomarker of exposure and neurotoxic effect in rats co-treated with a mixture of lead, arsenic and manganese. <i>NeuroToxicology</i> , 2013, 38, 33-41.	1.4	36
4	Manganese Alters Rat Brain Amino Acids Levels. <i>Biological Trace Element Research</i> , 2012, 150, 337-341.	1.9	24
5	Evaluation of neurobehavioral and neuroinflammatory end-points in the post-exposure period in rats sub-acute exposed to manganese. <i>Toxicology</i> , 2013, 314, 95-99.	2.0	17
6	Changes in rat urinary porphyrin profiles predict the magnitude of the neurotoxic effects induced by a mixture of lead, arsenic and manganese. <i>NeuroToxicology</i> , 2014, 45, 168-177.	1.4	16
7	Comparison Between 5-Aminosalicylic Acid (5-ASA) and Para-Aminosalicylic Acid (4-PAS) as Potential Protectors Against Mn-Induced Neurotoxicity. <i>Biological Trace Element Research</i> , 2013, 152, 113-116.	1.9	9
8	Alternative biomarkers of n-hexane exposure: Characterization of aminoderived pyrroles and thiol-pyrrole conjugates in urine of rats exposed to 2,5-hexanedione. <i>Toxicology Letters</i> , 2014, 224, 54-63.	0.4	9
9	Role of N-acetylcysteine in protecting against 2,5-hexanedione neurotoxicity in a rat model: Changes in urinary pyrroles levels and motor activity performance. <i>Environmental Toxicology and Pharmacology</i> , 2014, 38, 807-813.	2.0	6
10	Effect of manganese on acetylcholinesterase activity. <i>Toxicology</i> , 2012, 298, 61-62.	2.0	1
11	Toxic Mechanisms Underlying Motor Activity Changes Induced by a Mixture of Lead, Arsenic and Manganese. , 2017, 3, 31-42.		1
