#	ARTICLE	IF	CITATIONS
1	Tectonostratigraphy of the Márida Massif reveals a new Cadomian suture zone exposure in Gondwana (SW Iberia). <i>International Geology Review</i> , 2022, 64, 405-424.	1.1	10
2	Reply to Comment by Azor et al. on "On the Rootless Nature of a Devonian Suture in SW Iberia (Ossa-Morena Complex, Variscan Orogen): Geometry and Kinematics of the Azuaga Fault". <i>Tectonics</i> , 2022, 41, .	1.3	2
3	U-Pb geochronology and isotopic geochemistry of adakites and related magmas in the Ediacaran arc section of the SW Iberian Massif: The role of subduction erosion cycles in peri-Gondwanan arcs. <i>Gondwana Research</i> , 2022, 109, 89-112.	3.0	8
4	A unique blueschist facies metapelite with Mg-rich chloritoid from the Badajoz-Córdoba Unit (SW) Tj ETQq0 0 0 rgBT /Overlock 10 Tf 50 <i>International Geology Review</i> , 2021, 63, 1634-1657.	1.1	10
5	100 myr cycles of oceanic lithosphere generation in peri-Gondwana: Neoproterozoic-Devonian ophiolites from the NW African-Iberian margin of Gondwana and the Variscan Orogen. <i>Geological Society Special Publication</i> , 2021, 503, 169-184.	0.8	20
6	Geochemistry and Sm-Nd isotopic sources of Late Ediacaran siliciclastic series in the Ossa-Morena Complex: Iberian-Bohemian correlations. <i>International Journal of Earth Sciences</i> , 2021, 110, 467-485.	0.9	17
7	Whole-rock and Sm-Nd isotopic geochemistry of Triassic SW Iberia sandstones: implications for provenance. <i>Journal of Iberian Geology</i> , 2021, 47, 189-207.	0.7	0
8	Tectonic setting and isotopic sources (Sm-Nd) of the SW Iberian Autochthon (Variscan Orogen). <i>Journal of Iberian Geology</i> , 2021, 47, 121-150.	0.7	12
9	Tracking the Late Devonian high-P metamorphic belt in the Variscan Orogen: New constraints on the PT evolution of eclogites from the Cubito-Moura Unit (SW Iberian Massif). <i>Lithos</i> , 2021, 386-387, 106015.	0.6	4
10	On the Rootless Nature of a Devonian Suture in SW Iberia (Ossa-Morena Complex, Variscan Orogen): Geometry and Kinematics of the Azuaga Fault. <i>Tectonics</i> , 2021, 40, e2021TC006791.	1.3	3
11	Geochemical and isotopic (Sm Nd) provenance of Ediacaran-Cambrian metasedimentary series from the Iberian Massif. Paleoreconstruction of the North Gondwana margin. <i>Earth-Science Reviews</i> , 2020, 201, 103079.	4.0	20
12	Single subduction zone for the generation of Devonian ophiolites and high-P metamorphic belts of the Variscan Orogen (NW Iberia). <i>Terra Nova</i> , 2020, 32, 239-245.	0.9	6
13	Reconstruction of the prograde PT history of high-P migmatitic paragneisses via melt-reintegration approach and thermodynamic modelling (Allochthonous Complexes, NW Iberian Massif). <i>Journal of Metamorphic Geology</i> , 2020, 38, 629-653.	1.6	3
14	Updated geochronology and isotope geochemistry of the Vila de Cruces Ophiolite: a case study of a peri-Gondwanan back-arc ophiolite. <i>Geological Society Special Publication</i> , 2020, , SP503-2020-8.	0.8	8
15	Ediacaran Obduction of a Fore-Arc Ophiolite in SW Iberia: A Turning Point in the Evolving Geodynamic Setting of Peri-Gondwana. <i>Tectonics</i> , 2019, 38, 95-119.	1.3	26
16	Contrasting isotopic sources (Sm-Nd) of Late Ediacaran series in the Iberian Massif: Implications for the Central Iberian-Ossa Morena boundary. <i>Precambrian Research</i> , 2019, 324, 194-207.	1.2	19
17	The Calzadilla Ophiolite (SW Iberia) and the Ediacaran fore-arc evolution of the African margin of Gondwana. <i>Gondwana Research</i> , 2018, 58, 71-86.	3.0	32
18	Combined zircon U Pb and Lu Hf isotopes study of magmatism and high-P metamorphism of the basal allochthonous units in the SW Iberian Massif (Ossa-Morena complex). <i>Lithos</i> , 2018, 322, 20-37.	0.6	23

#	ARTICLE	IF	CITATIONS
19	Geochemistry and tectonostratigraphy of the basal allochthonous units of SW Iberia (Álvora Massif, Tj ETQq1 1 0.784314 rgBT /Over 0.6 29	0.784314	29
20	The metahyaloclastitic matrix of a unique metavolcanic block reveals subduction in the Somozas MÃlange (Cabo Ortegal Complex, NW Iberia): tectonic implications for the assembly of Pangea. Journal of Metamorphic Geology, 2016, 34, 963-985.	1.6	6
21	Allochthonous terranes involved in the Variscan suture of NW Iberia: A review of their origin and tectonothermal evolution. Earth-Science Reviews, 2016, 161, 140-178.	4.0	71
22	Tectonic evolution of Variscan Iberia: Gondwanaâ€“Laurussia collision revisited. Earth-Science Reviews, 2016, 162, 269-292.	4.0	94
23	Reply to Comment on â€œThe Late Devonian Variscan suture of the Iberian Massif: A correlation of high-pressure belts in NW and SW Iberiaâ€œ. Tectonophysics, 2016, 670, 155-160.	0.9	11
24	Reconstructing subduction polarity through the geochemistry of mafic rocks in a Cambrian magmatic arc along the Gondwana margin (Aâ€“rdenes Complex, NW Iberian Massif). International Journal of Earth Sciences, 2016, 105, 713-725.	0.9	10
25	The last stages of the Avalonianâ€“Cadomian arc in NW Iberian Massif: isotopic and igneous record for a long-lived peri-Gondwanan magmatic arc. Tectonophysics, 2016, 681, 6-14.	0.9	25
26	The Galiciaâ€“Ossa-Morena Zone: Proposal for a new zone of the Iberian Massif. Variscan implications. Tectonophysics, 2016, 681, 135-143.	0.9	45
27	Thickening vs. extension in the Variscan belt: Pâ€“T modelling in the Central Iberian autochthon. Tectonophysics, 2016, 681, 144-158.	0.9	22
28	Geochemistry of the Ediacaranâ€“Early Cambrian transition in Central Iberia: Tectonic setting and isotopic sources. Tectonophysics, 2016, 681, 15-30.	0.9	32
29	Provenance of the <sc>HP</sc>â€“<sc>HT</sc> subducted margin in the Variscan belt (Cabo Ortegal) Tj ETQq1 1 0.784314 rgBT / 1.6 25	1.6	25
30	The Late Devonian Variscan suture of the Iberian Massif: A correlation of high-pressure belts in NW and SW Iberia. Tectonophysics, 2015, 654, 96-100.	0.9	88
31	Provenance of the Variscan Upper Allochthon (Cabo Ortegal Complex, NW Iberian Massif). Gondwana Research, 2015, 28, 1434-1448.	3.0	54
32	Ediacaran to Cambrian oceanic rocks of the Gondwana margin and their tectonic interpretation. International Journal of Earth Sciences, 2015, 104, 1107-1121.	0.9	122
33	2-D thermal modeling of HTâ€“LP metamorphism in NW and Central Iberia: Implications for Variscan magmatism, rheology of the lithosphere and orogenic evolution. Tectonophysics, 2015, 657, 21-37.	0.9	34
34	Variscan ophiolites in NW Iberia: Tracking lost Paleozoic oceans and the assembly of Pangea. Episodes, 2015, 38, 315-333.	0.8	37
35	Variscan ophiolites in NW Iberia: Tracking Lost Paleozoic Oceans and the Assembly of Pangea. Episodes, 2015, 38, .	0.8	0
36	Two-stage collision: Exploring the birth of Pangea in the Variscan terranes. Gondwana Research, 2014, 25, 756-763.	3.0	97

#	ARTICLE	IF	CITATIONS
37	Re-interpreting the Devonian ophiolites involved in the Variscan suture: U <sup>238</sup> -Pb and Lu <sup>176</sup> -Hf zircon data of the Moeche Ophiolite (Cabo Ortegal Complex, NW Iberia). <i>International Journal of Earth Sciences</i> , 2014, 103, 1385-1402.	0.9	49
38	Correlation of the nappe stack in the Ibero-Armorican arc across the Bay of Biscay: a joint French-Spanish project. <i>Geological Society Special Publication</i> , 2014, 405, 77-113.	0.8	95
39	Large-scale flat-lying isoclinal folding in extending lithosphere: Santa MarÃa de la Alameda dome (Central Iberian Massif, Spain). <i>Lithosphere</i> , 2013, 5, 483-500.	0.6	15
40	Thickening and exhumation of the Variscan roots in the Iberian Central System: Tectonothermal processes and 40Ar/39Ar ages. <i>Tectonophysics</i> , 2013, 587, 207-221.	0.9	64
41	The eclogite facies gneisses of the Cabo Ortegal Complex (NW Iberian Massif): Tectonothermal evolution and exhumation model. <i>Journal of Iberian Geology</i> , 2013, 38, .	0.7	5
42	U <sup>238</sup> -Pb detrital zircon analysis of the lower allochthon of NW Iberia: age constraints, provenance and links with the Variscan mobile belt and Gondwanan cratons. <i>Journal of the Geological Society</i> , 2012, 169, 655-665.	0.9	52
43	Extensional Flow during Gravitational Collapse: A Tool for Setting Plate Convergence (PadrÃn) Tj ETQq1 1 0.784314 rgBT /Overlock 10 Tf 5	0.7	45
44	U-Pb Ages of Detrital Zircons from the Permo-Triassic Series of the Iberian Ranges: A Record of Variable Provenance during Rift Propagation. <i>Journal of Geology</i> , 2012, 120, 135-154.	0.7	17
45	Sm <sup>147</sup> -Nd isotope geochemistry and tectonic setting of the metasedimentary rocks from the basal allochthonous units of NW Iberia (Variscan suture, Galicia). <i>Lithos</i> , 2012, 148, 196-208.	0.6	39
46	The Bazar Ophiolite of NW Iberia: a relic of the Iapetus-Tornquist Ocean in the Variscan suture. <i>Terra Nova</i> , 2012, 24, 283-294.	0.9	40
47	The onset of the assembly of Pangaea in NW Iberia: Constraints on the kinematics of continental subduction. <i>Gondwana Research</i> , 2012, 22, 20-25.	3.0	47
48	The Corredoiras orthogneiss (NW Iberian Massif): Geochemistry and geochronology of the Paleozoic magmatic suite developed in a peri-Gondwanan arc. <i>Lithos</i> , 2012, 128-131, 84-99.	0.6	41
49	Tectonic evolution of a continental subduction-exhumation channel: Variscan structure of the basal allochthonous units in NW Spain. <i>Tectonics</i> , 2011, 30, .	1.3	57
50	Isotope geochemistry and revised geochronology of the Purrido Ophiolite (Cabo Ortegal Complex,) Tj ETQq0 0 0 rgBT /Overlock 10 Tf 5 <i>Journal of the Geological Society</i> , 2011, 168, 733-750.	0.9	43
51	One- and two-dimensional models are equally effective in monitoring the crust's thermal response to advection by large-scale thrusting during orogenesis. <i>Computers and Geosciences</i> , 2011, 37, 1205-1207.	2.0	3
52	Fabric Development in a Middle Devonian Intraoceanic Subduction Regime: The CareÃn Ophiolite (Northwest Spain). <i>Journal of Geology</i> , 2010, 118, 163-186.	0.7	29
53	A peri-Gondwanan arc in NW Iberia: Isotopic and geochemical constraints on the origin of the arc's A sedimentary approach. <i>Gondwana Research</i> , 2010, 17, 338-351.	3.0	49
54	A peri-Gondwanan arc in NW Iberia. II: Assessment of the intra-arc tectonothermal evolution through U <sup>238</sup> -Pb SHRIMP dating of mafic dykes. <i>Gondwana Research</i> , 2010, 17, 352-362.	3.0	30

#	ARTICLE	IF	CITATIONS
55	U-Pb ages of detrital zircons from the Basal allochthonous units of NW Iberia: Provenance and paleoposition on the northern margin of Gondwana during the Neoproterozoic and Paleozoic. <i>Gondwana Research</i> , 2010, 18, 385-399.	3.0	149
56	Magmatism and early-Variscan continental subduction in the northern Gondwana margin recorded in zircons from the basal units of Galicia, NW Spain. <i>Bulletin of the Geological Society of America</i> , 2010, 122, 219-235.	1.6	110
57	Upper crust reworking during gravitational collapse: the Bembibre-Pico Sacro detachment system (NW Iberia). <i>Journal of the Geological Society</i> , 2010, 167, 769-784.	0.9	40
58	Use of thermal modeling to assess the tectono-metamorphic history of the Lugo and Sanabria gneiss domes, Northwest Iberia. <i>Bulletin - Societe Geologique De France</i> , 2009, 180, 179-197.	0.9	38
59	From Rodinia to Pangaea: ophiolites from NW Iberia as witness for a long-lived continental margin. <i>Geological Society Special Publication</i> , 2009, 327, 317-341.	0.8	15
60	A rootless suture and the loss of the roots of a mountain chain: The Variscan belt of NW Iberia. <i>Comptes Rendus - Geoscience</i> , 2009, 341, 114-126.	0.4	214
61	Tectonic evolution of the upper allochthon of the Ordenes complex (northwestern Iberian Massif): Structural constraints to a polyorogenic peri-Gondwanan terrane. , 2007, , .		37
62	Cañon ophiolite, NW Spain: Suprasubduction zone setting for the youngest Rheic Ocean floor. <i>Geology</i> , 2007, 35, 53.	2.0	93
63	Space and time in the tectonic evolution of the northwestern Iberian Massif: Implications for the Variscan belt. <i>Memoir of the Geological Society of America</i> , 2007, , 403-423.	0.5	148
64	Paleozoic ophiolites in the Variscan suture of Galicia (northwest Spain): Distribution, characteristics, and meaning. <i>Memoir of the Geological Society of America</i> , 2007, , 425-444.	0.5	51
65	Geochemistry of two associated ophiolites from the Cabo Ortegal Complex (Variscan belt of NW) Tj ETQq1 1 0.784314 rgBT /Overlo	0.5	17
66	U-Pb chronometry of polymetamorphic high-pressure granulites: An example from the allochthonous terranes of the NW Iberian Variscan belt. <i>Memoir of the Geological Society of America</i> , 2007, , 469-488.	0.5	55
67	The Vila de Cruces Ophiolite: A Remnant of the Early Rheic Ocean in the Variscan Suture of Galicia (Northwest Iberian Massif). <i>Journal of Geology</i> , 2007, 115, 129-148.	0.7	113
68	Using SHRIMP zircon dating to unravel tectonothermal events in arc environments. The early Palaeozoic arc of NW Iberia revisited. <i>Terra Nova</i> , 2007, 19, 432-439.	0.9	45
69	<sup>40</sup> Ar/ <sup>39</sup> Ar laserprobe dating of mylonitic fabrics in a polyorogenic terrane of NW Iberia. <i>Journal of the Geological Society</i> , 2006, 163, 61-73.	0.9	57
70	A U-Pb Study of Zircons from a Lower Crustal Granulite Xenolith of the Spanish Central System: A Record of Iberian Lithospheric Evolution from the Neoproterozoic to the Triassic. <i>Journal of Geology</i> , 2006, 114, 471-483.	0.7	41
71	A pre-Rodinian ophiolite involved in the Variscan suture of Galicia (Cabo Ortegal Complex, NW Spain). <i>Journal of the Geological Society</i> , 2006, 163, 737-740.	0.9	21
72	Metamorphic evolution of anthophyllite/cummingtonite-cordierite rocks from the upper unit of the Ordenes Complex (Galicia, NW Spain). <i>European Journal of Mineralogy</i> , 2005, 17, 57-68.	0.4	5

#	ARTICLE	IF	CITATIONS
73	Shear stress in subducting continental margin from high-pressure, moderate-temperature metamorphism in the Ordenes Complex, Galicia, NW Spain. <i>Tectonophysics</i> , 2005, 397, 181-194.	0.9	11
74	Large extensional structures developed during emplacement of a crystalline thrust sheet: the Mondoñedo nappe (NW Spain). <i>Journal of Structural Geology</i> , 2003, 25, 1815-1839.	1.0	44
75	Constraints on the provenance of the uppermost allochthonous terrane of the NW Iberian Massif: inferences from detrital zircon U-Pb ages. <i>Terra Nova</i> , 2003, 15, 138-144.	0.9	69
76	Low-P metamorphism following a Barrovian-type evolution. Complex tectonic controls for a common transition, as deduced in the Mondoñedo thrust sheet (NW Iberian Massif). <i>Tectonophysics</i> , 2003, 365, 143-164.	0.9	55
77	Anticlockwise P-T Path of Granulites from the Monte Castelo Gabbro (Ordenes Complex, NW Spain). <i>Journal of Petrology</i> , 2003, 44, 305-327.	1.1	54
78	Tectonic setting of the Monte Castelo gabbro (Ordenes Complex, northwestern Iberian Massif): Evidence for an arc-related terrane in the hanging wall to the Variscan suture. , 2002, , .		24
79	Contrasting high-pressure metabasites from the Santiago unit (Ordenes Complex, northwestern) <i>Tectonophysics</i> , 2003, 365, 143-164.	0.784314	15
80	Thrust and detachment systems in the Ordenes Complex (northwestern Spain): Implications for the Variscan-Appalachian geodynamics. , 2002, , .		34
81	U-Pb evidence for a polyorogenic evolution of the HP-HT units of the NW Iberian Massif. <i>Contributions To Mineralogy and Petrology</i> , 2002, 143, 236-253.	1.2	66
82	Prograde development of corona textures in metagabbros of the Sobrado unit (Ordenes Complex,) <i>Tectonophysics</i> , 2003, 365, 143-164.		10
83	P-T Paths Derived from Garnet Growth Zoning in an Extensional Setting: an Example from the Tormes Gneiss Dome (Iberian Massif, Spain). <i>Journal of Petrology</i> , 2000, 41, 1489-1515.	1.1	61
84	Structural and kinematic analysis of the Corredoiras detachment: evidence for early Variscan synconvergent extension in the Ordenes Complex, NW Spain. <i>International Journal of Earth Sciences</i> , 1999, 88, 337-351.	0.9	30
85	Early Ordovician orogenic event in Galicia (NW Spain): evidence from U-Pb ages in the uppermost unit of the Ordenes Complex. <i>Earth and Planetary Science Letters</i> , 1999, 165, 213-228.	1.8	108
86	Tectonic Evolution of the Careón Ophiolite (Northwest Spain): A Remnant of Oceanic Lithosphere in the Variscan Belt. <i>Journal of Geology</i> , 1999, 107, 587-605.	0.7	101
87	Evolution métamorphique des métapelites du Massif hercynien des Rehamna (Maroc): implications tectonothermales. <i>Journal of African Earth Sciences</i> , 1998, 27, 87-106.	0.9	12
88	Variscan accretionary complex of northwest Iberia: Terrane correlation and succession of tectonothermal events. <i>Geology</i> , 1997, 25, 1103.	2.0	180
89	Diachronous Variscan tectonothermal activity in the NW Iberian Massif: Evidence from <sup>40</sup> Ar/ <sup>39</sup> Ar dating of regional fabrics. <i>Tectonophysics</i> , 1997, 277, 307-337.	0.9	256
90	P-T evolution of eclogites from the Agualada Unit (Ordenes Complex, northwest Iberian Massif, Spain): Implications for crustal subduction. <i>Lithos</i> , 1997, 40, 221-242.	0.6	57

#	ARTICLE	IF	CITATIONS
91	<i>P-T</i> path determinations in the Tormes Gneissic Dome, NW Iberian Massif, Spain. <i>Journal of Metamorphic Geology</i> , 1997, 15, 645-663.	1.6	26
92	P-T path determinations in the Tormes Gneissic Dome, NW Iberian Massif, Spain. , 1997, 15, 645.		3
93	Variscan exhumation of a subducted Paleozoic continental margin: The basal units of the Ordenes Complex, Galicia, NW Spain. <i>Tectonics</i> , 1996, 15, 106-121.	1.3	146
94	High-pressure micro-inclusions and development of an inverted metamorphic gradient in the Santiago Schists (Ordenes Complex, NW Iberian Massif, Spain): evidence of subduction and syncollisional decompression. <i>Journal of Metamorphic Geology</i> , 1995, 13, 141-164.	1.6	114
95	Tectonothermal evolution associated with Variscan crustal extension in the Tormes Gneiss Dome (NW Salamanca, Iberian Massif, Spain). <i>Tectonophysics</i> , 1994, 238, 117-138.	0.9	93
96	Opposite P, T, t paths of Hercynian metamorphism between the upper units of the Cabo Ortegal Complex and their substratum (northwest of the Iberian Massif). <i>Tectonophysics</i> , 1991, 191, 347-364.	0.9	38
97	Allochthonous Sequences. , 1990, , 220-246.		55
