1	<p>Impact of f and T_j on the stability of the system. f is a function of T_j and T_j is a function of f. The stability of the system is determined by the eigenvalues of the Jacobian matrix. The eigenvalues are given by $\lambda = \frac{1}{2} \left(-\frac{1}{T_j} \pm \sqrt{\frac{1}{T_j^2} - 4f} \right)$. The system is stable if the real part of the eigenvalues is negative. This occurs when $f > \frac{1}{4T_j^2}$.</p>	0.784314	rgBT /Over bo
