#	ARTICLE	IF	CITATIONS
1	Quantifying and mapping the human appropriation of net primary production in earth's terrestrial ecosystems. Proceedings of the National Academy of Sciences of the United States of America, 2007, 104, 12942-12947.	7.1	1,302
2	A mid-term analysis of progress toward international biodiversity targets. Science, 2014, 346, 241-244.	12.6	949
3	Growth in global materials use, GDP and population during the 20th century. Ecological Economics, 2009, 68, 2696-2705.	5.7	873
4	Future urban land expansion and implications for global croplands. Proceedings of the National Academy of Sciences of the United States of America, 2017, 114, 8939-8944.	7.1	757
5	EXIOBASE 3: Developing a Time Series of Detailed Environmentally Extended Multi-Regional Input-Output Tables. Journal of Industrial Ecology, 2018, 22, 502-515.	5.5	514
6	Global human appropriation of net primary production doubled in the 20th century. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 10324-10329.	7.1	501
7	Global priority areas for ecosystem restoration. Nature, 2020, 586, 724-729.	27.8	489
8	Globalization of land use: distant drivers of land change and geographic displacement of land use. Current Opinion in Environmental Sustainability, 2013, 5, 438-444.	6.3	487
9	How much land-based greenhouse gas mitigation can be achieved without compromising food security and environmental goals?. Global Change Biology, 2013, 19, 2285-2302.	9.5	454
10	Strategies for feeding the world more sustainably with organic agriculture. Nature Communications, 2017, 8, 1290.	12.8	437
11	Unexpectedly large impact of forest management and grazing on global vegetation biomass. Nature, 2018, 553, 73-76.	27.8	422
12	Land management and land-cover change have impacts of similar magnitude on surface temperature. Nature Climate Change, 2014, 4, 389-393.	18.8	404
13	Land system science and sustainable development of the earth system: A global land project perspective. Anthropocene, 2015, 12, 29-41.	3.3	388
14	Middle-range theories of land system change. Global Environmental Change, 2018, 53, 52-67.	7.8	323
15	Challenges for land system science. Land Use Policy, 2012, 29, 899-910.	5.6	320
16	Global patterns of socioeconomic biomass flows in the year 2000: A comprehensive assessment of supply, consumption and constraints. Ecological Economics, 2008, 65, 471-487.	5.7	298
17	Challenges and opportunities in mapping land use intensity globally. Current Opinion in Environmental Sustainability, 2013, 5, 484-493.	6.3	279
18	Increasing impacts of land use on biodiversity and carbon sequestration driven by population and economic growth. Nature Ecology and Evolution, 2019, 3, 628-637.	7.8	265

#	ARTICLE	IF	CITATIONS
19	Transitions in European land-management regimes between 1800 and 2010. Land Use Policy, 2015, 49, 53-64.	5.6	261
20	Environmental footprint family to address local to planetary sustainability and deliver on the SDGs. Science of the Total Environment, 2019, 693, 133642.	8.0	245
21	A research agenda for improving national Ecological Footprint accounts. Ecological Economics, 2009, 68, 1991-2007.	5.7	239
22	A conceptual framework for analysing and measuring land-use intensity. Current Opinion in Environmental Sustainability, 2013, 5, 464-470.	6.3	236
23	The physical economy of the European Union: Cross-country comparison and determinants of material consumption. Ecological Economics, 2006, 58, 676-698.	5.7	232
24	The global technical potential of bio-energy in 2050 considering sustainability constraints. Current Opinion in Environmental Sustainability, 2010, 2, 394-403.	6.3	225
25	Exploring the biophysical option space for feeding the world without deforestation. Nature Communications, 2016, 7, 11382.	12.8	221
26	Impacts of feeding less food-competing feedstuffs to livestock on global food system sustainability. Journal of the Royal Society Interface, 2015, 12, 20150891.	3.4	211
27	Calculating national and global ecological footprint time series: resolving conceptual challenges. Land Use Policy, 2004, 21, 271-278.	5.6	207
28	Land System Science: between global challenges and local realities. Current Opinion in Environmental Sustainability, 2013, 5, 433-437.	6.3	204
29	Global bioenergy potentials from agricultural land in 2050: Sensitivity to climate change, diets and yields. Biomass and Bioenergy, 2011, 35, 4753-4769.	5.7	202
30	A comprehensive global 5Âmin resolution land-use data set for the year 2000 consistent with national census data. Journal of Land Use Science, 2007, 2, 191-224.	2.2	195
31	Human Appropriation of Net Primary Production: Patterns, Trends, and Planetary Boundaries. Annual Review of Environment and Resources, 2014, 39, 363-391.	13.4	193
32	Land-use change and socio-economic metabolism in Austriaâ€”Part I: driving forces of land-use change: 1950â€”1995. Land Use Policy, 2003, 20, 1-20.	5.6	191
33	Rapid growth in agricultural trade: effects on global area efficiency and the role of management. Environmental Research Letters, 2014, 9, 034015.	5.2	184
34	How to calculate and interpret ecological footprints for long periods of time: the case of Austria 1926â€”1995. Ecological Economics, 2001, 38, 25-45.	5.7	182
35	Embodied HANPP: Mapping the spatial disconnect between global biomass production and consumption. Ecological Economics, 2009, 69, 328-334.	5.7	182
36	Linking pattern and process in cultural landscapes. An empirical study based on spatially explicit indicators. Land Use Policy, 2004, 21, 289-306.	5.6	176

#	ARTICLE	IF	CITATIONS
37	Hotspots of land use change in Europe. Environmental Research Letters, 2016, 11, 064020.	5.2	174
38	Ten facts about land systems for sustainability. Proceedings of the National Academy of Sciences of the United States of America, 2022, 119, .	7.1	157
39	The global loss of net primary production resulting from human-induced soil degradation in drylands. Ecological Economics, 2009, 69, 310-318.	5.7	152
40	Actual land demand of Austria 1926â€“2000: a variation on Ecological Footprint assessments. Land Use Policy, 2004, 21, 247-259.	5.6	146
41	Reconstructing European forest management from 1600 to 2010. Biogeosciences, 2015, 12, 4291-4316.	3.3	144
42	Interregional flows of ecosystem services: Concepts, typology and four cases. Ecosystem Services, 2018, 31, 231-241.	5.4	143
43	Land management: data availability and process understanding for global change studies. Global Change Biology, 2017, 23, 512-533.	9.5	142
44	Archetypical patterns and trajectories of land systems in Europe. Regional Environmental Change, 2018, 18, 715-732.	2.9	142
45	Biodiversity policy beyond economic growth. Conservation Letters, 2020, 13, e12713.	5.7	141
46	Analyzing the global human appropriation of net primary production â€” processes, trajectories, implications. An introduction. Ecological Economics, 2009, 69, 250-259.	5.7	135
47	Ecological footprint time series of Austria, the Philippines, and South Korea for 1961â€“1999: comparing the conventional approach to an â€”actual land areaâ€” approach. Land Use Policy, 2004, 21, 261-269.	5.6	131
48	Bias in the attribution of forest carbon sinks. Nature Climate Change, 2013, 3, 854-856.	18.8	129
49	How a socio-ecological metabolism approach can help to advance our understanding of changes in land-use intensity. Ecological Economics, 2012, 76, 8-14.	5.7	127
50	Essential Variables help to focus Sustainable Development Goals monitoring. Current Opinion in Environmental Sustainability, 2017, 26-27, 97-105.	6.3	126
51	International wood trade and forest change: A global analysis. Global Environmental Change, 2011, 21, 947-956.	7.8	119
52	Ecological footprints and human appropriation of net primary production: a comparison. Land Use Policy, 2004, 21, 279-288.	5.6	118
53	Land system change and food security: towards multi-scale land system solutions. Current Opinion in Environmental Sustainability, 2013, 5, 494-502.	6.3	117
54	Identifying and mapping the touristsâ€™ perception of cultural ecosystem services: A case study from an Alpine region. Land Use Policy, 2016, 56, 251-261.	5.6	113

#	ARTICLE	IF	CITATIONS
55	Dependency of global primary bioenergy crop potentials in 2050 on food systems, yields, biodiversity conservation and political stability. <i>Energy Policy</i> , 2012, 47, 260-269.	8.8	108
56	Biomass turnover time in terrestrial ecosystems halved by land use. <i>Nature Geoscience</i> , 2016, 9, 674-678.	12.9	108
57	Human appropriation of net primary production and species diversity in agricultural landscapes. <i>Agriculture, Ecosystems and Environment</i> , 2004, 102, 213-218.	5.3	106
58	The Material Stockâ€“Flowâ€“Service Nexus: A New Approach for Tackling the Decoupling Conundrum. <i>Sustainability</i> , 2017, 9, 1049.	3.2	106
59	Improved global cropland data as an essential ingredient for food security. <i>Global Food Security</i> , 2015, 4, 37-45.	8.1	103
60	Europeâ€™s other debt crisis caused by the long legacy of future extinctions. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2013, 110, 7342-7347.	7.1	102
61	Cropland area embodied in international trade: Contradictory results from different approaches. <i>Ecological Economics</i> , 2014, 104, 140-144.	5.7	95
62	National Ecosystem Assessments in Europe: A Review. <i>BioScience</i> , 2016, 66, 813-828.	4.9	94
63	Bioenergy: how much can we expect for 2050?. <i>Environmental Research Letters</i> , 2013, 8, 031004.	5.2	86
64	Models meet data: Challenges and opportunities in implementing land management in Earth system models. <i>Global Change Biology</i> , 2018, 24, 1470-1487.	9.5	86
65	Global inequalities in food consumption, cropland demand and land-use efficiency: A decomposition analysis. <i>Global Environmental Change</i> , 2020, 64, 102124.	7.8	79
66	Changes in ecosystem processes induced by land use: Human appropriation of aboveground NPP and its influence on standing crop in Austria. <i>Global Biogeochemical Cycles</i> , 2001, 15, 929-942.	4.9	76
67	Using embodied HANPP to analyze teleconnections in the global land system: Conceptual considerations. <i>Geografisk Tidsskrift</i> , 2009, 109, 119-130.	0.6	76
68	Human appropriation of net primary production as determinant of avifauna diversity in Austria. <i>Agriculture, Ecosystems and Environment</i> , 2005, 110, 119-131.	5.3	75
69	Exploring long-term trends in land use change and aboveground human appropriation of net primary production in nine European countries. <i>Land Use Policy</i> , 2015, 47, 426-438.	5.6	72
70	What drives the future supply of regulating ecosystem services in a mountain forest landscape?. <i>Forest Ecology and Management</i> , 2019, 445, 37-47.	3.2	70
71	Upcycling food leftovers and grass resources through livestock: Impact of livestock system and productivity. <i>Journal of Cleaner Production</i> , 2019, 219, 485-496.	9.3	69
72	The Need for Improved Maps of Global Cropland. <i>Eos</i> , 2013, 94, 31-32.	0.1	66

#	ARTICLE	IF	CITATIONS
73	Food systems in a zero-deforestation world: Dietary change is more important than intensification for climate targets in 2050. <i>Science of the Total Environment</i> , 2020, 735, 139353.	8.0	65
74	Long-term dynamics of terrestrial carbon stocks in Austria: a comprehensive assessment of the time period from 1830 to 2000. <i>Regional Environmental Change</i> , 2007, 7, 37-47.	2.9	62
75	Quantification of uncertainties in global grazing systems assessment. <i>Global Biogeochemical Cycles</i> , 2017, 31, 1089-1102.	4.9	62
76	Industrialization, Fossil Fuels, and the Transformation of Land Use. <i>Journal of Industrial Ecology</i> , 2008, 12, 686-703.	5.5	61
77	India's biophysical economy, 1961â€“2008. Sustainability in a national and global context. <i>Ecological Economics</i> , 2012, 76, 60-69.	5.7	60
78	Considering sustainability thresholds for BECCS in IPCC and biodiversity assessments. <i>GCB Bioenergy</i> , 2021, 13, 510-515.	5.6	60
79	Exploring the effects of drastic institutional and socio-economic changes on land system dynamics in Germany between 1883 and 2007. <i>Global Environmental Change</i> , 2014, 28, 98-108.	7.8	59
80	Guidance for assessing interregional ecosystem service flows. <i>Ecological Indicators</i> , 2019, 105, 92-106.	6.3	57
81	Land-use change and socio-economic metabolism in Austriaâ€”Part II: land-use scenarios for 2020. <i>Land Use Policy</i> , 2003, 20, 21-39.	5.6	56
82	Trading Land: A Review of Approaches to Accounting for Upstream Land Requirements of Traded Products. <i>Journal of Industrial Ecology</i> , 2015, 19, 703-714.	5.5	55
83	Changes in the spatial patterns of human appropriation of net primary production (HANPP) in Europe 1990â€“2006. <i>Regional Environmental Change</i> , 2016, 16, 1225-1238.	2.9	55
84	Assessing wood use efficiency and greenhouse gas emissions of wood product cascading in the European Union. <i>Journal of Cleaner Production</i> , 2018, 172, 3942-3954.	9.3	55
85	Natural and socioeconomic determinants of the embodied human appropriation of net primary production and its relation to other resource use indicators. <i>Ecological Indicators</i> , 2012, 23, 222-231.	6.3	54
86	Long-term trajectories of the human appropriation of net primary production: Lessons from six national case studies. <i>Ecological Economics</i> , 2012, 77, 129-138.	5.7	54
87	Quantifying interregional flows of multiple ecosystem services â€“ A case study for Germany. <i>Global Environmental Change</i> , 2020, 61, 102051.	7.8	54
88	The European land and inland water CO ₂ , CO, CH ₄ and N ₂ O balance between 2001 and 2005. <i>Biogeosciences</i> , 2012, 9, 3357-3380.	3.3	53
89	Contrasted greenhouse gas emissions from local versus long-range tomato production. <i>Agronomy for Sustainable Development</i> , 2014, 34, 593-602.	5.3	53
90	Biomass consumed in anthropogenic vegetation fires: Global patterns and processes. <i>Ecological Economics</i> , 2009, 69, 301-309.	5.7	52

#	ARTICLE	IF	CITATIONS
91	Seasonality constraints to livestock grazing intensity. <i>Global Change Biology</i> , 2017, 23, 1636-1647.	9.5	51
92	The Energetic Metabolism of the European Union and the United States: Decadal Energy Input Time-Series with an Emphasis on Biomass. <i>Journal of Industrial Ecology</i> , 2008, 10, 151-171.	5.5	49
93	What determines geographical patterns of the global human appropriation of net primary production?. <i>Journal of Land Use Science</i> , 2009, 4, 15-33.	2.2	47
94	Resource flows and land use in Austria 1950â€“2000: using the MEFA framework to monitor societyâ€™nature interaction for sustainability. <i>Land Use Policy</i> , 2004, 21, 215-230.	5.6	46
95	Biodiversity Assessment of Value Chains: State of the Art and Emerging Challenges. <i>Environmental Science & Technology</i> , 2020, 54, 9715-9728.	10.0	45
96	Human Appropriation of Net Primary Production. <i>Science</i> , 2002, 296, 1968-1969.	12.6	44
97	Global socioeconomic carbon stocks in long-lived products 1900â€“2008. <i>Environmental Research Letters</i> , 2012, 7, 034023.	5.2	43
98	Mapping and analysing cropland use intensity from a NPP perspective. <i>Environmental Research Letters</i> , 2016, 11, 014008.	5.2	43
99	Land system change in Italy from 1884 to 2007: Analysing the Northâ€“South divergence on the basis of an integrated indicator framework. <i>Land Use Policy</i> , 2014, 39, 366-375.	5.6	42
100	How to quantify biodiversity footprints of consumption? A review of multi-regional inputâ€“output analysis and life cycle assessment. <i>Current Opinion in Environmental Sustainability</i> , 2017, 29, 75-81.	6.3	42
101	Natural climate solutions versus bioenergy: Can carbon benefits of natural succession compete with bioenergy from short rotation coppice?. <i>GCB Bioenergy</i> , 2019, 11, 1283-1297.	5.6	42
102	Global Human Appropriation of Net Primary Production for Biomass Consumption in the European Union, 1986â€“2007. <i>Journal of Industrial Ecology</i> , 2015, 19, 825-836.	5.5	41
103	Land use?related Changes in Aboveground Carbon Stocks of Austria?s Terrestrial Ecosystems. <i>Ecosystems</i> , 2004, 7, 563.	3.4	39
104	International trade and Austria's livestock system: Direct and hidden carbon emission flows associated with production and consumption of products. <i>Ecological Economics</i> , 2010, 69, 920-929.	5.7	39
105	Patterns and changes of land use and land-use efficiency in Africa 1980â€“2005: an analysis based on the human appropriation of net primary production framework. <i>Regional Environmental Change</i> , 2016, 16, 1507-1520.	2.9	39
106	Changes in land use in South Africa between 1961 and 2006: an integrated socio-ecological analysis based on the human appropriation of net primary production framework. <i>Regional Environmental Change</i> , 2012, 12, 715-727.	2.9	38
107	Consumptionâ€“Based Conservation Targeting: Linking Biodiversity Loss to Upstream Demand through a Global Wildlife Footprint. <i>Conservation Letters</i> , 2017, 10, 531-538.	5.7	38
108	Large greenhouse gas savings due to changes in the post-Soviet food systems. <i>Environmental Research Letters</i> , 2019, 14, 065009.	5.2	38
