DALIL CHRISTOLL

#	Article	IF	CITATIONS
1	Multilevel interactions between native and ectopic isoprenoid pathways affect global metabolism in rice. Transgenic Research, 2022, 31, 249-268.	2.4	4
2	Physicochemical characterization of the recombinant lectin scytovirin and microbicidal activity of the SD1 domain produced in rice against HIV-1. Plant Cell Reports, 2022, , 1.	5.6	3
3	Metabolic Engineering of Crocin Biosynthesis in Nicotiana Species. Frontiers in Plant Science, 2022, 13, 861140.	3.6	16
4	Development of a facile genetic transformation system for the Spanish elite rice paella genotype Bomba. Transgenic Research, 2022, 31, 325-340.	2.4	1
5	The Biosynthesis of Non-Endogenous Apocarotenoids in Transgenic Nicotiana glauca. Metabolites, 2022, 12, 575.	2.9	5
6	Fruit crops in the era of genome editing: closing the regulatory gap. Plant Cell Reports, 2021, 40, 915-930.	5.6	17
7	Engineered Maize Hybrids with Diverse Carotenoid Profiles and Potential Applications in Animal Feeding. Advances in Experimental Medicine and Biology, 2021, 1261, 95-113.	1.6	2
8	Modification of cereal plant architecture by genome editing to improve yields. Plant Cell Reports, 2021, 40, 953-978.	5.6	18
9	β-carotene and Bacillus thuringiensis insecticidal protein differentially modulate feeding behaviour, mortality and physiology of European corn borer (Ostrinia nubilalis). PLoS ONE, 2021, 16, e0246696.	2.5	4
10	Nitrogen inputs influence vegetative metabolism in maize engineered with a seed-specific carotenoid pathway. Plant Cell Reports, 2021, 40, 899-911.	5.6	1
11	Genome editing in fruit, ornamental, and industrial crops. Transgenic Research, 2021, 30, 499-528.	2.4	13
12	Contributions of the international plant science community to the fight against infectious diseases in humans—part 2: Affordable drugs in edible plants for endemic and reâ€emerging diseases. Plant Biotechnology Journal, 2021, 19, 1921-1936.	8.3	31
13	The Coordinated Upregulated Expression of Genes Involved in MEP, Chlorophyll, Carotenoid and Tocopherol Pathways, Mirrored the Corresponding Metabolite Contents in Rice Leaves during De-Etiolation. Plants, 2021, 10, 1456.	3.5	3
14	Genome editing in cereal crops: an overview. Transgenic Research, 2021, 30, 461-498.	2.4	46
15	Preface: Genome editing in plants. Transgenic Research, 2021, 30, 317-320.	2.4	2
16	Transgenic and genome-edited fruits: background, constraints, benefits, and commercial opportunities. Horticulture Research, 2021, 8, 166.	6.3	46
17	Contributions of the international plant science community to the fight against human infectious diseases – part 1: epidemic and pandemic diseases. Plant Biotechnology Journal, 2021, 19, 1901-1920.	8.3	44
18	Recognition motifs rather than phylogenetic origin influence the ability of targeting peptides to import nuclear-encoded recombinant proteins into rice mitochondria. Transgenic Research, 2020, 29, 37-52.	2.4	16

#	Article	IF	CITATIONS
19	The subcellular localization of two isopentenyl diphosphate isomerases in rice suggests a role for the endoplasmic reticulum in isoprenoid biosynthesis. Plant Cell Reports, 2020, 39, 119-133.	5.6	14
20	Inactivation of rice starch branching enzyme IIb triggers broad and unexpected changes in metabolism by transcriptional reprogramming. Proceedings of the National Academy of Sciences of the United States of America, 2020, 117, 26503-26512.	7.1	45
21	Transit Peptides From Photosynthesis-Related Proteins Mediate Import of a Marker Protein Into Different Plastid Types and Within Different Species. Frontiers in Plant Science, 2020, 11, 560701.	3.6	6
22	Potential Applications of Plant Biotechnology against SARS-CoV-2. Trends in Plant Science, 2020, 25, 635-643.	8.8	135
23	The ratio of phytosiderophores nicotianamine to deoxymugenic acid controls metal homeostasis in rice. Planta, 2019, 250, 1339-1354.	3.2	9
24	CRISPR/Cas9 mutations in the rice Waxy/GBSSI gene induce allele-specific and zygosity-dependent feedback effects on endosperm starch biosynthesis. Plant Cell Reports, 2019, 38, 417-433.	5.6	45
25	A simplified technoâ€economic model for the molecular pharming of antibodies. Biotechnology and Bioengineering, 2019, 116, 2526-2539.	3.3	28
26	Applications of multiplex genome editing in higher plants. Current Opinion in Biotechnology, 2019, 59, 93-102.	6.6	78
27	Zm <scp>PBF</scp> and Zm <scp>GAMYB</scp> transcription factors independently transactivate the promoter of the maize (<i>Zea mays</i>) βâ€carotene hydroxylase 2 gene. New Phytologist, 2019, 222, 793-804.	7.3	20
28	Iron and Zinc in the Embryo and Endosperm of Rice (Oryza sativa L.) Seeds in Contrasting 2′-Deoxymugineic Acid/Nicotianamine Scenarios. Frontiers in Plant Science, 2018, 9, 1190.	3.6	47
29	Unexpected synergistic HIV neutralization by a triple microbicide produced in rice endosperm. Proceedings of the National Academy of Sciences of the United States of America, 2018, 115, E7854-E7862.	7.1	28
30	Carotenoids moderate the effectiveness of a Bt gene against the European corn borer, Ostrinia nubilalis. PLoS ONE, 2018, 13, e0199317.	2.5	9
31	CRISPR/Cas9-induced monoallelic mutations in the cytosolic AGPase large subunit gene APL2 induce the ectopic expression of APL2 and the corresponding small subunit gene APS2b in rice leaves. Transgenic Research, 2018, 27, 423-439.	2.4	10
32	Biofortification of crops with nutrients: factors affecting utilization and storage. Current Opinion in Biotechnology, 2017, 44, 115-123.	6.6	83
33	The Arabidopsis ORANCE (AtOR) gene promotes carotenoid accumulation in transgenic corn hybrids derived from parental lines with limited carotenoid pools. Plant Cell Reports, 2017, 36, 933-945.	5.6	38
34	Phytosiderophores determine thresholds for iron and zinc accumulation in biofortified rice endosperm while inhibiting the accumulation of cadmium. Journal of Experimental Botany, 2017, 68, 4983-4995.	4.8	77
35	Reconstruction of the astaxanthin biosynthesis pathway in rice endosperm reveals a metabolic bottleneck at the level of endogenous 1²-carotene hydroxylase activity. Transgenic Research, 2017, 26, 13-23.	2.4	21
36	The expression of heterologous Fe (<scp>III</scp>) phytosiderophore transporter <i>Hv<scp>YS</scp>1</i> in rice increases Fe uptake, translocation and seed loading and excludes heavy metals by selective Fe transport. Plant Biotechnology Journal, 2017, 15, 423-432.	8.3	63

#	Article	IF	CITATIONS
37	Characteristics of Genome Editing Mutations in Cereal Crops. Trends in Plant Science, 2017, 22, 38-52.	8.8	122
38	The Silencing of Carotenoid β-Hydroxylases by RNA Interference in Different Maize Genetic Backgrounds Increases the β-Carotene Content of the Endosperm. International Journal of Molecular Sciences, 2017, 18, 2515.	4.1	20
39	The carotenoid cleavage dioxygenase <scp>CCD</scp> 2 catalysing the synthesis of crocetin in spring crocuses and saffron is a plastidial enzyme. New Phytologist, 2016, 209, 650-663.	7.3	88
40	A carotenogenic mini-pathway introduced into white corn does not affect development or agronomic performance. Scientific Reports, 2016, 6, 38288.	3.3	12
41	Rice endosperm is costâ€effective for the production of recombinant griffithsin with potent activity against HIV. Plant Biotechnology Journal, 2016, 14, 1427-1437.	8.3	40
42	Carotenoidâ€enriched transgenic corn delivers bioavailable carotenoids to poultry and protects them against coccidiosis. Plant Biotechnology Journal, 2016, 14, 160-168.	8.3	36
43	Metabolic engineering of astaxanthin biosynthesis in maize endosperm and characterization of a prototype high oil hybrid. Transgenic Research, 2016, 25, 477-489.	2.4	44
44	Freedomâ€toâ€operate analysis of a transgenic multivitamin corn variety. Plant Biotechnology Journal, 2016, 14, 1225-1240.	8.3	9
45	Patterns of CRISPR/Cas9 activity in plants, animals and microbes. Plant Biotechnology Journal, 2016, 14, 2203-2216.	8.3	141
46	Engineered maize as a source of astaxanthin: processing and application as fish feed. Transgenic Research, 2016, 25, 785-793.	2.4	20
47	CRISPR/Cas9 activity in the rice OsBEIIb gene does not induce off-target effects in the closely related paralog OsBEIIa. Molecular Breeding, 2016, 36, 1.	2.1	45
48	The distribution of carotenoids in hens fed on biofortified maize is influenced by feed composition, absorption, resource allocation and storage. Scientific Reports, 2016, 6, 35346.	3.3	53
49	Oral intake of genetically engineered high-carotenoid corn ameliorates hepatomegaly and hepatic steatosis in PTEN haploinsufficient mice. Biochimica Et Biophysica Acta - Molecular Basis of Disease, 2016, 1862, 526-535.	3.8	6
50	Identification of lineâ€specific strategies for improving carotenoid production in synthetic maize through dataâ€driven mathematical modeling. Plant Journal, 2016, 87, 455-471.	5.7	9
51	Bottlenecks in carotenoid biosynthesis and accumulation in rice endosperm are influenced by the precursor–product balance. Plant Biotechnology Journal, 2016, 14, 195-205.	8.3	113
52	Rice endosperm produces an underglycosylated and potent form of the <scp>HIV</scp> â€neutralizing monoclonal antibody 2G12. Plant Biotechnology Journal, 2016, 14, 97-108.	8.3	58
53	Regulatory approval and a firstâ€inâ€human phase I clinical trial of a monoclonal antibody produced in transgenic tobacco plants. Plant Biotechnology Journal, 2015, 13, 1106-1120.	8.3	205
54	Combined transcript, proteome, and metabolite analysis of transgenic maize seeds engineered for enhanced carotenoid synthesis reveals pleotropic effects in core metabolism. Journal of Experimental Botany, 2015, 66, 3141-3150.	4.8	65

#	Article	IF	CITATIONS
55	Knowledge-driven approaches for engineering complex metabolic pathways in plants. Current Opinion in Biotechnology, 2015, 32, 54-60.	6.6	43
56	Nutritionally important carotenoids as consumer products. Phytochemistry Reviews, 2015, 14, 727-743.	6.5	118
57	Cloning and Functional Characterization of the Maize (Zea mays L.) Carotenoid Epsilon Hydroxylase Gene. PLoS ONE, 2015, 10, e0128758.	2.5	5
58	Introduction: Plant-Produced Protein Products. Biotechnology in Agriculture and Forestry, 2014, , 1-11.	0.2	0
59	A novel carotenoid, 4-keto-α-carotene, as an unexpected by-product during genetic engineering of carotenogenesis in rice callus. Phytochemistry, 2014, 98, 85-91.	2.9	17
60	Identification of carotenoids using mass spectrometry. Mass Spectrometry Reviews, 2014, 33, 353-372.	5.4	139
61	Strategic patent analysis in plant biotechnology: terpenoid indole alkaloid metabolic engineering as a case study. Plant Biotechnology Journal, 2014, 12, 117-134.	8.3	10
62	Cloning and functional analysis of the promoters that upregulate carotenogenic gene expression during flower development in <i>Gentiana lutea</i> . Physiologia Plantarum, 2014, 150, 493-504.	5.2	20
63	An <i>in vitro</i> system for the rapid functional characterization of genes involved in carotenoid biosynthesis and accumulation. Plant Journal, 2014, 77, 464-475.	5.7	63
64	Recombinant plant-derived pharmaceutical proteins: current technical and economic bottlenecks. Biotechnology Letters, 2014, 36, 2367-2379.	2.2	74
65	Can plant biotechnology help break the HIV–malaria link?. Biotechnology Advances, 2014, 32, 575-582.	11.7	10
66	Engineering Complex Metabolic Pathways in Plants. Annual Review of Plant Biology, 2014, 65, 187-223.	18.7	117
67	Building bridges: an integrated strategy for sustainable food production throughout the value chain. Molecular Breeding, 2013, 32, 743-770.	2.1	28
68	Can the world afford to ignore biotechnology solutions that address food insecurity?. Plant Molecular Biology, 2013, 83, 5-19.	3.9	19
69	Abscisic acid and the herbicide safener cyprosulfamide cooperatively enhance abiotic stress tolerance in rice. Molecular Breeding, 2013, 32, 463-484.	2.1	17
70	Realising the value of plant molecular pharming to benefit the poor in developing countries and emerging economies. Plant Biotechnology Journal, 2013, 11, 1029-1033.	8.3	57
71	Efficient recovery of recombinant proteins from cereal endosperm is affected by interaction with endogenous storage proteins. Biotechnology Journal, 2013, 8, 1203-1212.	3.5	7
72	The contribution of transgenic plants to better health through improved nutrition: opportunities and constraints. Genes and Nutrition, 2013, 8, 29-41.	2.5	122

#	Article	IF	CITATIONS
73	Biofortification of plants with altered antioxidant content and composition: genetic engineering strategies. Plant Biotechnology Journal, 2013, 11, 129-141.	8.3	102
74	Plant genetic engineering and agricultural biotechnology 1983–2013. Trends in Biotechnology, 2013, 31, 125-127.	9.3	39
75	The application of GMOs in agriculture and in food production for a better nutrition: two different scientific points of view. Genes and Nutrition, 2013, 8, 255-270.	2.5	75
76	Plurality of opinion, scientific discourse and pseudoscience: an in depth analysis of the Séralini et al. study claiming that Roundupâ"¢ Ready corn or the herbicide Roundupâ"¢ cause cancer in rats. Transgenic Research, 2013, 22, 255-267.	2.4	55
77	Paradoxical EU agricultural policies on genetically engineered crops. Trends in Plant Science, 2013, 18, 312-324.	8.8	57
78	Ascorbic acid synthesis and metabolism in maize are subject to complex and genotypeâ€dependent feedback regulation during endosperm development. Biotechnology Journal, 2013, 8, 1221-1230.	3.5	16
79	Targeted transcriptomic and metabolic profiling reveals temporal bottlenecks in the maize carotenoid pathway that may be addressed by multigene engineering. Plant Journal, 2013, 75, 441-455.	5.7	27
80	Fast Quantitative Method for the Analysis of Carotenoids in Transgenic Maize. Journal of Agricultural and Food Chemistry, 2013, 61, 5279-5285.	5.2	27
81	A question of balance: achieving appropriate nutrient levels in biofortified staple crops. Nutrition Research Reviews, 2013, 26, 235-245.	4.1	20
82	Engineering metabolic pathways in plants by multigene transformation. International Journal of Developmental Biology, 2013, 57, 565-576.	0.6	38
83	Editorial (Hot Topic: From Medicinal Plants to Medicines in Plants: Plant Factories for the Production) Tj ETQq1	0.78431	4 rgBT /Over
84	Transgenic Multivitamin Biofortified Corn: Science, Regulation, and Politics. , 2013, , 335-347.		3
85	Seeds as a Production System for Molecular Pharming Applications: Status and Prospects. Current Pharmaceutical Design, 2013, 19, 5543-5552.	1.9	32
86	Metabolic Engineering of Plant Secondary Products: Which Way Forward?. Current Pharmaceutical Design, 2013, 19, 5622-5639.	1.9	58
87	Plant Cells as Pharmaceutical Factories. Current Pharmaceutical Design, 2013, 19, 5640-5660.	1.9	55
88	Mice fed on a diet enriched with genetically engineered multivitamin corn show no subâ€acute toxic effects and no subâ€chronic toxicity. Plant Biotechnology Journal, 2012, 10, 1026-1034.	8.3	15
89	Functional characterization of the recombinant HIV-neutralizing monoclonal antibody 2F5 produced in maize seeds. Plant Molecular Biology, 2012, 80, 477-488.	3.9	13
90	Functional characterization of the Gentiana lutea zeaxanthin epoxidase (GlZEP) promoter in transgenic tomato plants. Transgenic Research, 2012, 21, 1043-1056.	2.4	16

#	Article	IF	CITATIONS
91	Transgenic rice grains expressing a heterologous ϕhydroxyphenylpyruvate dioxygenase shift tocopherol synthesis from the γ to the α isoform without increasing absolute tocopherol levels. Transgenic Research, 2012, 21, 1093-1097.	2.4	38
92	Combinatorial Genetic Transformation of Cereals and the Creation of Metabolic Libraries for the Carotenoid Pathway. Methods in Molecular Biology, 2012, 847, 419-435.	0.9	16
93	Constitutive expression of a barley Fe phytosiderophore transporter increases alkaline soil tolerance and results in iron partitioning between vegetative and storage tissues under stress. Plant Physiology and Biochemistry, 2012, 53, 46-53.	5.8	33
94	Field trials and tribulations—making sense of the regulations for experimental field trials of transgenic crops in Europe. Plant Biotechnology Journal, 2012, 10, 511-523.	8.3	24
95	Nutritious crops producing multiple carotenoids – a metabolic balancing act. Trends in Plant Science, 2011, 16, 532-540.	8.8	84
96	Synergistic metabolism in hybrid corn indicates bottlenecks in the carotenoid pathway and leads to the accumulation of extraordinary levels of the nutritionally important carotenoid zeaxanthin. Plant Biotechnology Journal, 2011, 9, 384-393.	8.3	46
97	<i>Bacillus thuringiensis</i> : a century of research, development and commercial applications. Plant Biotechnology Journal, 2011, 9, 283-300.	8.3	598
98	EU legitimizes GM crop exclusion zones. Nature Biotechnology, 2011, 29, 315-317.	17.5	39
99	High-value products from transgenic maize. Biotechnology Advances, 2011, 29, 40-53.	11.7	48
100	Simultaneous expression of Arabidopsis ϕhydroxyphenylpyruvate dioxygenase and MPBQ methyltransferase in transgenic corn kernels triples the tocopherol content. Transgenic Research, 2011, 20, 177-181.	2.4	42
101	The potential impact of plant biotechnology on the Millennium Development Goals. Plant Cell Reports, 2011, 30, 249-265.	5.6	47
102	Nutritionally enhanced crops and food security: scientific achievements versus political expediency. Current Opinion in Biotechnology, 2011, 22, 245-251.	6.6	60
103	A golden era—pro-vitamin A enhancement in diverse crops. In Vitro Cellular and Developmental Biology - Plant, 2011, 47, 205-221.	2.1	90
104	Can Microbicides Turn the Tide Against HIV?. Current Pharmaceutical Design, 2010, 16, 468-485.	1.9	15
105	Critical evaluation of strategies for mineral fortification of staple food crops. Transgenic Research, 2010, 19, 165-180.	2.4	236
106	Molecular characterization of the Arginine decarboxylase gene family in rice. Transgenic Research, 2010, 19, 785-797.	2.4	12
107	Cloning and functional characterization of the maize carotenoid isomerase and Î ² -carotene hydroxylase genes and their regulation during endosperm maturation. Transgenic Research, 2010, 19, 1053-1068.	2.4	49
108	Promoter diversity in multigene transformation. Plant Molecular Biology, 2010, 73, 363-378.	3.9	155
