#	Article	IF	Citations
1	Seroconversion to Multiple Islet Autoantibodies and Risk of Progression to Diabetes in Children. JAMA - Journal of the American Medical Association, 2013, 309, 2473.	7.4	914
2	Type 1 diabetes mellitus. Nature Reviews Disease Primers, 2017, 3, 17016.	30.5	790
3	Autoantibody appearance and risk for development of childhood diabetes in offspring of parents with type 1 diabetes: the 2-year analysis of the German BABYDIAB Study.. Diabetes, 1999, 48, 460-468.	0.6	588
4	Bone marrow mesenchymal stem cells express a restricted set of functionally active chemokine receptors capable of promoting migration to pancreatic islets. Blood, 2005, 106, 419-427.	1.4	544
5	Differentiation of Diabetes by Pathophysiology, Natural History, and Prognosis. Diabetes, 2017, 66, 241-255.	0.6	454
6	Early Infant Feeding and Risk of Developing Type 1 Diabetes–Associated Autoantibodies. JAMA - Journal of the American Medical Association, 2003, 290, 1721.	7.4	432
7	Prediction of IDDM in the General Population: Strategies Based on Combinations of Autoantibody Markers. Diabetes, 1997, 46, 1701-1710.	0.6	394
8	Quantification of islet-cell antibodies and prediction of insulin-dependent diabetes. Lancet, The, 1990, 335, 147-149.	13.7	382
9	Widespread seasonal gene expression reveals annual differences in human immunity and physiology. Nature Communications, 2015, 6, 7000.	12.8	367
10	Combined Analysis of Autoantibodies Improves Prediction of IDDM in Islet Cell Antibody-Positive Relatives. Diabetes, 1994, 43, 1304-1310.	0.6	360
11	Diabetes Antibody Standardization Program: First Assay Proficiency Evaluation. Diabetes, 2003, 52, 1128-1136.	0.6	336
12	The 6 year incidence of diabetes-associated autoantibodies in genetically at-risk children: the TEDDY study. Diabetologia, 2015, 58, 980-987.	6.3	313
13	Risk of Pediatric Celiac Disease According to HLA Haplotype and Country. New England Journal of Medicine, 2014, 371, 42-49.	27.0	270
14	Transplantation of human islets without immunosuppression. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 19054-19058.	7.1	261
15	A Type I Interferon Transcriptional Signature Precedes Autoimmunity in Children Genetically at Risk for Type 1 Diabetes. Diabetes, 2014, 63, 2538-2550.	0.6	261
16	Harmonization of Glutamic Acid Decarboxylase and Islet Antigen-2 Autoantibody Assays for National Institute of Diabetes and Digestive and Kidney Diseases Consortia. Journal of Clinical Endocrinology and Metabolism, 2010, 95, 3360-3367.	3.6	244
17	Stratification of Type 1 Diabetes Risk on the Basis of Islet Autoantibody Characteristics. Diabetes, 2004, 53, 384-392.	0.6	243
18	Diabetes Antibody Standardization Program: evaluation of assays for autoantibodies to glutamic acid decarboxylase and islet antigen-2. Diabetologia, 2008, 51, 846-852.	6.3	239

#	Article	IF	Citations
19	Natural History of Type 1 Diabetes. Diabetes, 2005, 54, S25-S31.	0.6	223
20	A Novel Micro-assay for Insulin Autoantibodies. Journal of Autoimmunity, 1997, 10, 473-478.	6.5	215
21	Age-related islet autoantibody incidence in offspring of patients with type 1 diabetes. Diabetologia, 2012, 55, 1937-1943.	6.3	209
22	Predictors of Postpartum Diabetes in Women With Gestational Diabetes Mellitus. Diabetes, 2006, 55, 792-797.	0.6	208
23	Expansion of Th17 Cells and Functional Defects in T Regulatory Cells Are Key Features of the Pancreatic Lymph Nodes in Patients With Type 1 Diabetes. Diabetes, 2011, 60, 2903-2913.	0.6	199
24	Primary Dietary Intervention Study to Reduce the Risk of Islet Autoimmunity in Children at Increased Risk for Type 1 Diabetes. Diabetes Care, 2011, 34, 1301-1305.	8.6	192
25	Novel organ-specific circulating cardiac autoantibodies in dilated cardiomyopathy. Journal of the American College of Cardiology, 1990, 15, 1527-1534.	2.8	188
26	Pancreatic Â-Cell Function and Immune Responses to Insulin After Administration of Intranasal Insulin to Humans At Risk for Type 1 Diabetes. Diabetes Care, 2004, 27, 2348-2355.	8.6	178
27	Effects of High-Dose Oral Insulin on Immune Responses in Children at High Risk for Type 1 Diabetes. JAMA - Journal of the American Medical Association, 2015, 313, 1541.	7.4	174
28	Mature high-affinity immune responses to (pro)insulin anticipate the autoimmune cascade that leads to type 1 diabetes. Journal of Clinical Investigation, 2004, 114, 589-597.	8.2	173
29	Islet-reactive CD8 [+] T cell frequencies in the pancreas, but not in blood, distinguish type 1 diabetic patients from healthy donors. Science Immunology, 2018, 3, .	11.9	171
30	Islet isolation for allotransplantation: variables associated with successful islet yield and graft function. Diabetologia, 2005, 48, 906-912.	6.3	170
31	Autoantibodies to zinc transporter 8 and SLC30A8 genotype stratify type 1 diabetes risk. Diabetologia, 2009, 52, 1881-1888.	6.3	166
32	Islet autoantibody markers in IDDM: risk assessment strategies yielding high sensitivity. Diabetologia, 1995, 38, 816-822.	6.3	163
33	The TrialNet Natural History Study of the Development of Type 1 Diabetes: objectives, design, and initial results. Pediatric Diabetes, 2009, 10, 97-104.	2.9	160
34	Islet transplantation in patients with autoimmune diabetes induces homeostatic cytokines that expand autoreactive memory T cells. Journal of Clinical Investigation, 2008, 118, 1806-14.	8.2	159
35	IA-2 antibodies - a sensitive marker of IDDM with clinical onset in childhood and adolescence. Diabetologia, 1998, 41, 424-429.	6.3	154
36	Compromised Gut Microbiota Networks in Children With Anti-Islet Cell Autoimmunity. Diabetes, 2014, 63, 2006-2014.	0.6	154

#	Article	IF	Citations
37	Prediction of IDDM in the general population: strategies based on combinations of autoantibody markers. Diabetes, 1997, 46, 1701-1710.	0.6	152
38	Induction of Tolerance in Type 1 Diabetes via Both CD4+CD25+ T Regulatory Cells and T Regulatory Type 1 Cells. Diabetes, 2006, 55, 1571-1580.	0.6	151
39	Diabetes Antibody Standardization Program: evaluation of assays for insulin autoantibodies. Diabetologia, 2010, 53, 2611-2620.	6.3	149
40	Adoptive transfer of allogeneic regulatory T cells into patients with chronic graft-versus-host disease. Cytotherapy, 2015, 17, 473-486.	0.7	149
41	Autoantibody-negative insulin-dependent diabetes mellitus after SARS-CoV-2 infection: a case report. Nature Metabolism, 2020, 2, 1021-1024.	11.9	149
42	Disease Sensitivity and Specificity of 52 Assays for Glutamic Acid Decarboxylase Antibodies: The Second International GADAB Workshop. Diabetes, 1995, 44, 636-640.	0.6	139
43	Yield of a Public Health Screening of Children for Islet Autoantibodies in Bavaria, Germany. JAMA - Journal of the American Medical Association, 2020, 323, 339.	7.4	139
44	Identification of protein tyrosine phosphatase-like IA2 (islet cell antigen 512) as the insulin-dependent diabetes-related 37/40K autoantigen and a target of islet-cell antibodies. Journal of Immunology, 1995, 155, 5419-26.	0.8	137
45	Zinc Transporter 8 Antibodies Complement GAD and IA-2 Antibodies in the Identification and Characterization of Adult-Onset Autoimmune Diabetes. Diabetes Care, 2010, 33, 104-108.	8.6	136
46	Predicting Type 1 Diabetes Using Biomarkers. Diabetes Care, 2015, 38, 989-996.	8.6	136
47	Predictors of Progression From the Appearance of Islet Autoantibodies to Early Childhood Diabetes: The Environmental Determinants of Diabetes in the Young (TEDDY). Diabetes Care, 2015, 38, 808-813.	8.6	135
48	Distinct cytoplasmic islet cell antibodies with different risks for Type 1 (insulin-dependent) diabetes mellitus. Diabetologia, 1992, 35, 385-388.	6.3	133
49	Transmission of Maternal Islet Antibodies and Risk of Autoimmune Diabetes in Offspring of Mothers With Type 1 Diabetes. Diabetes, 2004, 53, 1-4.	0.6	132
50	Brief Communication: Early Appearance of Islet Autoantibodies Predicts Childhood Type 1 Diabetes in Offspring of Diabetic Parents. Annals of Internal Medicine, 2004, 140, 882.	3.9	132
51	No Effect of the 1α,25-Dihydroxyvitamin D3 on β-Cell Residual Function and Insulin Requirement in Adults With New-Onset Type 1 Diabetes. Diabetes Care, 2010, 33, 1443-1448.	8.6	131
52	Systems biology of the IMIDIA biobank from organ donors and pancreatectomised patients defines a novel transcriptomic signature of islets from individuals with type 2 diabetes. Diabetologia, 2018, 61, 641-657.	6.3	131
53	Similar low frequency of anti-MOG IgG and IgM in MS patients and healthy subjects. Neurology, 2004, 62, 2092-2094.	1.1	129
54	CXCR1/2 inhibition enhances pancreatic islet survival after transplantation. Journal of Clinical Investigation, 2012, 122, 3647-3651.	8.2	129

#	Article	IF	Citations
55	Rapamycin Monotherapy in Patients With Type 1 Diabetes Modifies CD4+CD25+FOXP3+ Regulatory T-Cells. Diabetes, 2008, 57, 2341-2347.	0.6	128
56	Serum exchange and use of dilutions have improved precision of measurement of islet cell antibodies. Journal of Immunological Methods, 1988, 106, 83-88.	1.4	122
57	Antibodies to Islet 37k Antigen, But Not to Glutamate Decarboxylase, Discriminate Rapid Progression to IDDM in Endocrine Autoimmunity. Diabetes, 1994, 43, 1254-1259.	0.6	122
58	Autoantibody Response to Islet Transplantation in Type 1 Diabetes. Diabetes, 2001, 50, 2464-2471.	0.6	120
59	Mature high-affinity immune responses to (pro)insulin anticipate the autoimmune cascade that leads to type 1 diabetes. Journal of Clinical Investigation, 2004, 114, 589-597.	8.2	120
60	Evidence for In Vivo Primed and Expanded Autoreactive T Cells as a Specific Feature of Patients with Type 1 Diabetes. Journal of Immunology, 2007, 179, 5785-5792.	0.8	116
61	A Report on the International Transglutaminase Autoantibody Workshop for Celiac Disease. American Journal of Gastroenterology, 2009, 104, 154-163.	0.4	116
62	Can We Really Predict IDDM?. Diabetes, 1993, 42, 213-220.	0.6	113
63	Feature ranking of type 1 diabetes susceptibility genes improves prediction of type 1 diabetes. Diabetologia, 2014, 57, 2521-2529.	6.3	112
64	Combined analysis of autoantibodies improves prediction of IDDM in islet cell antibody-positive relatives. Diabetes, 1994, 43, 1304-1310.	0.6	109
65	International Workshop on Lessons From Animal Models for Human Type 1 Diabetes: Identification of Insulin but Not Glutamic Acid Decarboxylase or IA-2 as Specific Autoantigens of Humoral Autoimmunity in Nonobese Diabetic Mice. Diabetes, 2001, 50, 2451-2458.	0.6	108
66	Comparison of Tissue Transglutaminase-Specific Antibody Assays with Established Antibody Measurements for Coeliac Disease. Journal of Autoimmunity, 1999, 12, 51-56.	6.5	106
67	Ghrelin-producing epsilon cells in the developing and adult human pancreas. Diabetologia, 2009, 52, 486-493.	6.3	105
68	Alloantibody and Autoantibody Monitoring Predicts Islet Transplantation Outcome in Human Type 1 Diabetes. Diabetes, 2013, 62, 1656-1664.	0.6	105
69	IDDM2/insulin VNTR modifies risk conferred by IDDM1/HLA for development of Type 1 diabetes and associated autoimmunity. Diabetologia, 2003, 46, 712-720.	6.3	104
70	A genomic toolkit to investigate kinesin and myosin motor function in cells. Nature Cell Biology, 2013, 15, 325-334.	10.3	104
71	Effects of Gluten Intake on Risk of Celiac Disease: A Case-Control Study on a Swedish Birth Cohort. Clinical Gastroenterology and Hepatology, 2016, 14, 403-409.e3.	4.4	102
72	Genetic scores to stratify risk of developing multiple islet autoantibodies and type 1 diabetes: A prospective study in children. PLoS Medicine, 2018, 15, e1002548.	8.4	101

#	Article	IF	Citations
73	Maturation of the humoral autoimmune response to epitopes of GAD in preclinical childhood type 1 diabetes. Diabetes, 2000, 49, 202-208.	0.6	96
74	Age- and Islet Autoimmunity–Associated Differences in Amino Acid and Lipid Metabolites in Children at Risk for Type 1 Diabetes. Diabetes, 2011, 60, 2740-2747.	0.6	96
75	Autoantibodies to glutamic acid decarboxylase in palatal myoclonus and epilepsy. Annals of Neurology, 1994, 36, 665-667.	5.3	93
76	Six Months of Gluten-Free Diet Do Not Influence Autoantibody Titers, but Improve Insulin Secretion in Subjects at High Risk for Type 1 Diabetes. Journal of Clinical Endocrinology and Metabolism, 2003, 88, 162-165.	3.6	91
77	High Level of Concordance Between Assays for Glutamic Acid Decarboxylase Antibodies: The First International Glutamic Acid Decarboxylase Antibody Workshop. Diabetes, 1994, 43, 1005-1009.	0.6	90
78	Up-Regulation of CD1d Expression Restores the Immunoregulatory Function of NKT Cells and Prevents Autoimmune Diabetes in Nonobese Diabetic Mice. Journal of Immunology, 2004, 172, 5908-5916.	0.8	90
79	Capillary blood islet autoantibody screening for identifying pre-type 1 diabetes in the general population: design and initial results of the Fr1da study. BMJ Open, 2016, 6, e011144.	1.9	89
80	Modulation of humoral islet autoimmunity by pancreas allotransplantation influences allograft outcome in patients with type 1 diabetes. Diabetes, 2000, 49, 218-224.	0.6	88
81	Favorable outcome of experimental islet xenotransplantation without immunosuppression in a nonhuman primate model of diabetes. Proceedings of the National Academy of Sciences of the United States of America, 2017, 114, 11745-11750.	7.1	85
82	A Public Health Antibody Screening Indicates a 6-Fold Higher SARS-CoV-2 Exposure Rate than Reported Cases in Children. Med, 2021, 2, 149-163.e4.	4.4	85
83	Association of IA-2 autoantibodies with HLA DR4 phenotypes in IDDM. Diabetologia, 1996, 39, 1223-1226.	6.3	84
84	Antibodies to tissue transglutaminase C in Type I diabetes. Diabetologia, 1999, 42, 1195-1198.	6.3	84
85	IA-2 antibody prevalence and risk assessment of early insulin requirement in subjects presenting with type 2 diabetes (UKPDS 71). Diabetologia, 2005, 48, 703-708.	6.3	83
86	A combined risk score enhances prediction of type 1 diabetes among susceptible children. Nature Medicine, 2020, 26, 1247-1255.	30.7	83
87	Inappropriate major histocompatibility complex expression on cardiac tissue in dilated cardiomyopathy. Relevance for autoimmunity?. Journal of Autoimmunity, 1990, 3, 187-200.	6.5	82
88	GAD Autoantibody Affinity and Epitope Specificity Identify Distinct Immunization Profiles in Children at Risk for Type 1 Diabetes. Diabetes, 2007, 56, 1527-1533.	0.6	81
89	Cesarean Section and Interferon-Induced Helicase Gene Polymorphisms Combine to Increase Childhood Type 1 Diabetes Risk. Diabetes, 2011, 60, 3300-3306.	0.6	81
90	Mesenchymal stromal cells improve transplanted islet survival and islet function in a syngeneic mouse model. Diabetologia, 2014, 57, 522-531.	6.3	80

#	Article	IF	Citations
91	Can Islet Cell Antibodies Predict IDDM in the General Population?. Diabetes Care, 1993, 16, 45-50.	8.6	79
92	IL-7 Abrogates Suppressive Activity of Human CD4+CD25+FOXP3+ Regulatory T Cells and Allows Expansion of Alloreactive and Autoreactive T Cells. Journal of Immunology, 2012, 189, 5649-5658.	0.8	79
93	Persistence of Pancreatic Insulin mRNA Expression and Proinsulin Protein in Type 1 Diabetes Pancreata. Cell Metabolism, 2017, 26, 568-575.e3.	16.2	77
94	Early autoantibody responses in prediabetes are IgG1 dominated and suggest antigen-specific regulation. Journal of Immunology, 1999, 163, 525-32.	0.8	77
95	Multi-omics profiling of living human pancreatic islet donors reveals heterogeneous beta cell trajectories towards type 2 diabetes. Nature Metabolism, 2021, 3, 1017-1031.	11.9	76
96	Predicting Islet Cell Autoimmunity and Type 1 Diabetes: An 8-Year TEDDY Study Progress Report. Diabetes Care, 2019, 42, 1051-1060.	8.6	75
97	IDDM1 and Multiple Family History of Type 1 Diabetes Combine to Identify Neonates at High Risk for Type 1 Diabetes. Diabetes Care, 2004, 27, 2695-2700.	8.6	74
98	Children followed in the TEDDY study are diagnosed with type 1 diabetes at an early stage of disease. Pediatric Diabetes, 2014, 15, 118-126.	2.9	73
99	Bone marrow as an alternative site for islet transplantation. Blood, 2009, 114, 4566-4574.	1.4	72
100	Plasma 25-Hydroxyvitamin D Concentration and Risk of Islet Autoimmunity. Diabetes, 2018, 67, 146-154.	0.6	72
101	Rapamycin and interleukin-10 treatment induces T regulatory type 1 cells that mediate antigen-specific transplantation tolerance. Diabetes, 2006, 55, 40-9.	0.6	72
102	Immunology and diabetes workshop: Report on the third international (Stage 3) workshop on the standardisation of cytoplasmic islet cell antibodies. Diabetologia, 1988, 31, 451-452.	6.3	71
103	Development of celiac disease-associated antibodies in offspring of parents with Type I diabetes. Diabetologia, 2000, 43, 1005-1011.	6.3	71
104	Modulating the natural history of type 1 diabetes in children at high genetic risk by mucosal insulin immunization. Current Diabetes Reports, 2008, 8, 87-93.	4.2	71
105	Islet autoantibody phenotypes and incidence in children at increased risk for type 1 diabetes. Diabetologia, 2015, 58, 2317-2323.	6.3	71
106	Assessment of precision, concordance, specificity, and sensitivity of islet cell antibody measurement in 41 assays. Diabetologia, 1990, 33, 731-736.	6.3	70
107	Comparison of a novel micro-assay for insulin autoantibodies with the conventional radiobinding assay. Diabetologia, 1998, 41, 681-683.	6.3	70
108	Mesenchymal Cells Appearing in Pancreatic Tissue Culture Are Bone Marrow-Derived Stem Cells With the Capacity to Improve Transplanted Islet Function Â. Stem Cells, 2010, 28, 140-151.	3.2	70

#	Article	IF	Citations
109	Role of CCL2/MCP-1 in Islet Transplantation. Cell Transplantation, 2010, 19, 1031-1046.	2.5	69
