#	ARTICLE	IF	CITATIONS
1	Concept of Carbon-related Energy to Connect Energy Consumption with CO ₂ Emissions. Nihon Enerugi Gakkaishi/Journal of the Japan Institute of Energy, 2021, 100, 62-72.	0.2	2
2	Cost analysis of stable electric and hydrogen energy supplies derived from 100% variable renewable resources systems. Renewable Energy, 2021, 178, 1165-1173.	8.9	18
3	The role of advanced end-use technologies in long-term climate change mitigation: the interlinkage between primary bioenergy and energy end-use. Climatic Change, 2020, 163, 1659-1673.	3.6	4
4	Power Plant Optimal Operation Time Approach in Best Energy Mixture Model with Simulation Analysis. Lecture Notes in Networks and Systems, 2019, , 80-90.	0.7	0
5	An Analysis of Supply and Demand Strategy of Bioethanol Using an Agent-based Global Energy Model. Nihon Enerugi Gakkaishi/Journal of the Japan Institute of Energy, 2017, 96, 239-249.	0.2	2
6	Role of end-use technologies in long-term GHG reduction scenarios developed with the BET model. Climatic Change, 2014, 123, 583-596.	3.6	11
7	Global Bioenergy Resources and Utilization Technologies. Alliance for Global Sustainability Bookseries, 2008, , 101-111.	0.2	2
8	Evaluation of supply potential of energy crops in Japan considering cases of improvement of crop productivity. Biomass and Bioenergy, 2005, 29, 355-359.	5.7	11
9	Evaluation of bioenergy potential with a multi-regional global-land-use-and-energy model. Biomass and Bioenergy, 2001, 21, 185-203.	5.7	102
10	Scenario analysis of bioenergy resources and CO ₂ emissions with a global land use and energy model. Applied Energy, 2000, 66, 325-337.	10.1	31
11	Dynamic analysis of biomass resources with a global land use and energy model. International Journal of Global Energy Issues, 1998, 11, 91.	0.4	6
