#	Article	IF	CITATIONS
1	Weight-of-evidence evaluation in environmental assessment: Review of qualitative and quantitative approaches. Science of the Total Environment, 2009, 407, 5199-5205.	3.9	220
2	Fish Biliary Polycyclic Aromatic Hydrocarbon Metabolites Estimated by Fixed-Wavelength Fluorescence: Comparison with HPLC-Fluorescent Detection. Ecotoxicology and Environmental Safety, 1996, 35, 16-23.	2.9	133
3	Derivation of a benchmark for freshwater ionic strength. Environmental Toxicology and Chemistry, 2013, 32, 263-271.	2.2	113
4	A methodology for inferring the causes of observed impairments in aquatic ecosystems. Environmental Toxicology and Chemistry, 2002, 21, 1101-1111.	2.2	111
5	Development and evaluation of the Lake Macroinvertebrate Integrity Index (LMII) for New Jersey lakes and reservoirs. Environmental Monitoring and Assessment, 2002, 77, 311-333.	1.3	87
6	Assessing causation of the extirpation of stream macroinvertebrates by a mixture of ions. Environmental Toxicology and Chemistry, 2013, 32, 277-287.	2.2	87
7	Synchronous fluorometric measurement of metabolites of polycyclic aromatic hydrocarbons in the bile of brown bullhead. Environmental Toxicology and Chemistry, 1994, 13, 707-715.	2.2	83
8	Why and how to combine evidence in environmental assessments: Weighing evidence and building cases. Science of the Total Environment, 2011, 409, 1406-1417.	3.9	80
9	Methods development and use of macroinvertebrates as indicators of ecological conditions for streams in the Mid-Atlantic Highlands Region. Environmental Monitoring and Assessment, 2002, 78, 169-212.	1.3	63
10	Cnidocil apparatus: sensory receptor of Physalia nematocytes. Journal of Ultrastructure Research, 1980, 72, 13-19.	1.4	56
11	Can biological assessments discriminate among types of stress? A case study from the Eastern Corn Belt Plains ecoregion. Environmental Toxicology and Chemistry, 2000, 19, 1113-1119.	2.2	55
12	The Science and Philosophy of a Method for Assessing Environmental Causes. Human and Ecological Risk Assessment (HERA), 2010, 16, 19-34.	1.7	51
13	A method for deriving waterâ€quality benchmarks using field data. Environmental Toxicology and Chemistry, 2013, 32, 255-262.	2.2	50
14	Using field data and weight of evidence to develop water quality criteria. Integrated Environmental Assessment and Management, 2008, 4, 490-504.	1.6	48
15	A Framework for Fully Integrating Environmental Assessment. Environmental Management, 2008, 42, 543-56.	1.2	47
16	Relationship of land use and elevated ionic strength in Appalachian watersheds. Environmental Toxicology and Chemistry, 2013, 32, 296-303.	2.2	45
17	Assessing ecological risk in watersheds: A case study of problem formulation in the Big Darby Creek watershed, Ohio, USA. Environmental Toxicology and Chemistry, 2000, 19, 1082-1096.	2.2	44
18	Why care about aquatic insects: Uses, benefits, and services. Integrated Environmental Assessment and Management, 2015, 11, 188-194.	1.6	44

SUSAN M CORMIER

#	Article	IF	CITATIONS
19	Causal Characteristics for Ecoepidemiology. Human and Ecological Risk Assessment (HERA), 2010, 16, 53-73.	1.7	41
20	Cellular basis for tentacle adherence in the Portuguese man-of-war (Physalia physalis). Tissue and Cell, 1980, 12, 713-721.	1.0	33
21	A weight of evidence framework for environmental assessments: Inferring qualities. Integrated Environmental Assessment and Management, 2017, 13, 1038-1044.	1.6	30
22	Determining probable causes of ecological impairment in the Little Scioto River, Ohio, USA: Part 1. Listing candidate causes and analyzing evidence. Environmental Toxicology and Chemistry, 2002, 21, 1112-1124.	2.2	29
23	Determining the causes of impairments in the Little Scioto River, Ohio, USA: Part 2. Characterization of causes. Environmental Toxicology and Chemistry, 2002, 21, 1125-1137.	2.2	26
24	Using Our Brains to Develop Better Policy. Risk Analysis, 2012, 32, 374-380.	1.5	26
25	A field-based model of the relationship between extirpation of salt-intolerant benthic invertebrates and background conductivity. Science of the Total Environment, 2018, 633, 1629-1636.	3.9	26
26	New nephron development in fish from polluted waters: a possible biomarker. Ecotoxicology, 1995, 4, 157-168.	1.1	25
27	Contaminant Exposure, Biochemical, and Histopathological Biomarkers in White Suckers from Contaminated and Reference Sites in the Sheboygan River, Wisconsin. Journal of Great Lakes Research, 1997, 23, 119-130.	0.8	22
28	A method for assessing the potential for confounding applied to ionic strength in central Appalachian streams. Environmental Toxicology and Chemistry, 2013, 32, 288-295.	2.2	22
29	A methodology for inferring the causes of observed impairments in aquatic ecosystems. Environmental Toxicology and Chemistry, 2002, 21, 1101-11.	2.2	22
30	Systematic Review and Weight of Evidence Are Integral to Ecological and Human Health Assessments: They Need an Integrated Framework. Integrated Environmental Assessment and Management, 2020, 16, 718-728.	1.6	20
31	The U.S. Environmental Protection Agency's Stressor Identification Guidance: A Process for Determining the Probable Causes of Biological Impairments. Human and Ecological Risk Assessment (HERA), 2003, 9, 1431-1443.	1.7	18
32	Estimation of exposure criteria values for biliary polycyclic aromatic hydrocarbon metabolite concentrations in white suckers (<i>Catostomus commersoni</i>). Environmental Toxicology and Chemistry, 2000, 19, 1120-1126.	2.2	17
33	What is meant by riskâ€based environmental quality criteria?. Integrated Environmental Assessment and Management, 2008, 4, 486-489.	1.6	16
34	A methodology for inferring the causes of observed impairments in aquatic ecosystems. , 2002, 21, 1101.		16
35	A weight of evidence framework for environmental assessments: Inferring quantities. Integrated Environmental Assessment and Management, 2017, 13, 1045-1051.	1.6	15
36	Field-based method for evaluating the annual maximum specific conductivity tolerated by freshwater invertebrates. Science of the Total Environment, 2018, 633, 1637-1646.	3.9	15
