

Oleg Batishchev

List of Publications by Citations

Source: <https://exaly.com/author-pdf/6979836/oleg-batishchev-publications-by-citations.pdf>
Version: 2024-04-10

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.
The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

61 papers	602 citations	12 h-index	22 g-index
82 ext. papers	808 ext. citations	2.4 avg, IF	3.87 L-index

#	Paper	IF	Citations
61	Pore formation in lipid membrane I: Continuous reversible trajectory from intact bilayer through hydrophobic defect to transversal pore. <i>Scientific Reports</i> , 2017 , 7, 12152	4.9	67
60	Single HA2 mutation increases the infectivity and immunogenicity of a live attenuated H5N1 intranasal influenza vaccine candidate lacking NS1. <i>PLoS ONE</i> , 2011 , 6, e18577	3.7	59
59	Pore formation in lipid membrane II: Energy landscape under external stress. <i>Scientific Reports</i> , 2017 , 7, 12509	4.9	55
58	Structural analysis of influenza A virus matrix protein M1 and its self-assemblies at low pH. <i>PLoS ONE</i> , 2013 , 8, e82431	3.7	46
57	Origin of proton affinity to membrane/water interfaces. <i>Scientific Reports</i> , 2017 , 7, 4553	4.9	36
56	Heat transport and electron distribution function in laser produced plasmas with hot spots. <i>Physics of Plasmas</i> , 2002 , 9, 2302-2310	2.1	35
55	pH-Dependent Formation and Disintegration of the Influenza A Virus Protein Scaffold To Provide Tension for Membrane Fusion. <i>Journal of Virology</i> , 2016 , 90, 575-85	6.6	29
54	Line Activity of Ganglioside GM1 Regulates the Raft Size Distribution in a Cholesterol-Dependent Manner. <i>Langmuir</i> , 2017 , 33, 3517-3524	4	27
53	Alkylated glass partition allows formation of solvent-free lipid bilayer by Montal-Mueller technique. <i>Bioelectrochemistry</i> , 2008 , 74, 22-5	5.6	22
52	Influenza virus Matrix Protein M1 preserves its conformation with pH, changing multimerization state at the priming stage due to electrostatics. <i>Scientific Reports</i> , 2017 , 7, 16793	4.9	17
51	Matrix proteins of enveloped viruses: a case study of Influenza A virus M1 protein. <i>Journal of Biomolecular Structure and Dynamics</i> , 2019 , 37, 671-690	3.6	16
50	Lateral stress profile and fluorescent lipid probes. FRET pair of probes that introduces minimal distortions into lipid packing. <i>Biochimica Et Biophysica Acta - Biomembranes</i> , 2018 , 1860, 2337-2347	3.8	16
49	Continuum Models of Membrane Fusion: Evolution of the Theory. <i>International Journal of Molecular Sciences</i> , 2020 , 21,	6.3	12
48	Lateral Membrane Heterogeneity Regulates Viral-Induced Membrane Fusion during HIV Entry. <i>International Journal of Molecular Sciences</i> , 2018 , 19,	6.3	12
47	Residence time of singlet oxygen in membranes. <i>Scientific Reports</i> , 2018 , 8, 14000	4.9	11
46	Membrane-mediated interaction of amphipathic peptides can be described by a one-dimensional approach. <i>Physical Review E</i> , 2019 , 99, 022401	2.4	10
45	Switching between Successful and Dead-End Intermediates in Membrane Fusion. <i>International Journal of Molecular Sciences</i> , 2017 , 18,	6.3	10

44	Interaction of Polylysines with the Surface of Lipid Membranes. <i>Behavior Research Methods</i> , 2013 , 17, 139-166	6.1	9
43	The dimeric ectodomain of the alkali-sensing insulin receptor-related receptor (ectoIRR) has a droplike shape. <i>Journal of Biological Chemistry</i> , 2019 , 294, 17790-17798	5.4	8
42	Elastic deformations mediate interaction of the raft boundary with membrane inclusions leading to their effective lateral sorting. <i>Scientific Reports</i> , 2020 , 10, 4087	4.9	7
41	Model of membrane fusion: Continuous transition to fusion pore with regard of hydrophobic and hydration interactions. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2014 , 8, 153-161	0.7	7
40	Interaction of amphipathic peptides mediated by elastic membrane deformations. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2017 , 11, 206-216	0.7	6
39	Spatial organization of Dps and DNA-Dps complexes. <i>Journal of Molecular Biology</i> , 2021 , 433, 166930	6.5	6
38	Phosphatidylcholine Membrane Fusion Is pH-Dependent. <i>International Journal of Molecular Sciences</i> , 2018 , 19,	6.3	5
37	Solution Structure, Self-Assembly, and Membrane Interactions of the Matrix Protein from Newcastle Disease Virus at Neutral and Acidic pH. <i>Journal of Virology</i> , 2019 , 93,	6.6	5
36	Isoprenoid lipid chains increase membrane resistance to pore formation. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2014 , 8, 304-308	0.7	4
35	Monolayerwise application of linear elasticity theory well describes strongly deformed lipid membranes and the effect of solvent. <i>Soft Matter</i> , 2020 , 16, 1179-1189	3.6	4
34	BILMIX: a new approach to restore the size polydispersity and electron density profiles of lipid bilayers from liposomes using small-angle X-ray scattering data. <i>Journal of Applied Crystallography</i> , 2020 , 53, 236-243	3.8	4
33	Ectodomain Pulling Combines with Fusion Peptide Inserting to Provide Cooperative Fusion for Influenza Virus and HIV. <i>International Journal of Molecular Sciences</i> , 2020 , 21,	6.3	4
32	The Effect of Transmembrane Protein Shape on Surrounding Lipid Domain Formation by Wetting. <i>Biomolecules</i> , 2019 , 9,	5.9	4
31	Electron transport and morphological changes in the electrode/erythrocyte system. <i>Mendeleev Communications</i> , 2017 , 27, 183-185	1.9	3
30	Elasticity and phase behaviour of biomimetic membrane systems containing tetraether archaeal lipids. <i>Colloids and Surfaces A: Physicochemical and Engineering Aspects</i> , 2020 , 601, 124974	5.1	3
29	Quasi-Atomistic Approach to Modeling of Liposomes. <i>Crystallography Reports</i> , 2020 , 65, 258-263	0.6	3
28	Amphipathic CRAC-Containing Peptides Derived from the Influenza Virus A M1 Protein Modulate Cholesterol-Dependent Activity of Cultured IC-21 Macrophages. <i>Biochemistry (Moscow)</i> , 2018 , 83, 982-991	2.9	3
27	Effects of Sterols on the Interaction of SDS, Benzalkonium Chloride, and A Novel Compound, Kor105, with Membranes. <i>Biomolecules</i> , 2019 , 9,	5.9	3

26	Electrochemical activity and morphology of human erythrocytes at optically transparent ITO electrode. <i>Doklady Physical Chemistry</i> , 2017 , 477, 201-204	0.8	3
25	Small-angle X-Ray analysis of macromolecular structure: the structure of protein NS2 (NEP) in solution. <i>Crystallography Reports</i> , 2017 , 62, 894-902	0.6	3
24	Molecular distribution and charge of polylysine layers at the surface of lipid membranes and mica. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2009 , 3, 496-503	0.7	3
23	Activity-dependent conformational transitions of the insulin receptor-related receptor. <i>Journal of Biological Chemistry</i> , 2021 , 296, 100534	5.4	3
22	Mechanism of pore formation in stearyl-oleoyl-phosphatidylcholine membranes subjected to lateral tension. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2017 , 11, 193-205	0.7	2
21	Voltammetric Analysis in Blood Serum in Patients with Severe Combined Trauma. <i>Doklady Physical Chemistry</i> , 2019 , 486, 67-69	0.8	2
20	Study of adsorption of Influenza virus matrix protein M1 on lipid membranes by the technique of fluorescent probes. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2017 , 11, 225-230	0.7	2
19	Superhydrophobization of low-carbon steel with conversion coatings. <i>Protection of Metals and Physical Chemistry of Surfaces</i> , 2014 , 50, 898-902	0.9	2
18	Line tension and structure of through pore edge in lipid bilayer. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2014 , 8, 297-303	0.7	2
17	Effect of acidity on the formation of solvent-free lipid bilayers. <i>Russian Journal of Electrochemistry</i> , 2006 , 42, 1107-1112	1.2	2
16	Membrane-Mediated Lateral Interactions Regulate the Lifetime of Gramicidin Channels. <i>Membranes</i> , 2020 , 10,	3.8	2
15	Lipid Membrane Adsorption Determines Photodynamic Efficiency of Imidazolyl-Substituted Porphyrins. <i>Biomolecules</i> , 2019 , 9,	5.9	2
14	Membrane shape changes at initial stage of membrane fusion under the action of proteins inducing spontaneous curvature. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2013 , 7, 234-241	0.7	1
13	The Cytoplasmic Tail of Influenza A Virus Hemagglutinin and Membrane Lipid Composition Change the Mode of M1 Protein Association with the Lipid Bilayer. <i>Membranes</i> , 2021 , 11,	3.8	1
12	Scanning probe microscopy investigation of the bacteriophage effect on bacterial biofilms. <i>Microscopy and Microanalysis</i> , 2021 , 27, 504-506	0.5	1
11	Cyclopentane rings in hydrophobic chains of a phospholipid enhance the bilayer stability to electric breakdown. <i>Soft Matter</i> , 2020 , 16, 3216-3223	3.6	0
10	Normal Fluctuations of Biological Membrane Shape as a Coupling Factor for Ordered Monolayer Domains. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2019 , 13, 205-211	0.7	0
9	Interaction of Ordered Lipid Domain Boundaries and Amphipathic Peptides Regulates Probability of Pore Formation in Membranes. <i>Biochemistry (Moscow) Supplement Series A: Membrane and Cell Biology</i> , 2020 , 14, 319-330	0.7	0
