| #  | Article                                                                                                                                                                                                                                                | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Sample-to-answer COVID-19 nucleic acid testing using a low-cost centrifugal microfluidic platform with bead-based signal enhancement and smartphone read-out. Lab on A Chip, 2021, 21, 2932-2944.                                                      | 3.1 | 47        |
| 2  | The application of microbeads to microfluidic systems for enhanced detection and purification of biomolecules. Methods, 2017, 116, 112-124.                                                                                                            | 1.9 | 45        |
| 3  | Multimodal chromatography: debottlenecking the downstream processing of monoclonal antibodies.<br>Pharmaceutical Bioprocessing, 2015, 3, 263-279.                                                                                                      | 0.8 | 39        |
| 4  | Multiplexed microfluidic fluorescence immunoassay with photodiode array signal acquisition for sub-minute and point-of-need detection of mycotoxins. Lab on A Chip, 2018, 18, 1569-1580.                                                               | 3.1 | 37        |
| 5  | Silica bead-based microfluidic device with integrated photodiodes for the rapid capture and detection of rolling circle amplification products in the femtomolar range. Biosensors and Bioelectronics, 2019, 128, 68-75.                               | 5.3 | 33        |
| 6  | High-Throughput Nanoliter-Scale Analysis and Optimization of Multimodal Chromatography for the<br>Capture of Monoclonal Antibodies. Analytical Chemistry, 2016, 88, 7959-7967.                                                                         | 3.2 | 32        |
| 7  | Sub-attomole detection of HIV-1 using padlock probes and rolling circle amplification combined with microfluidic affinity chromatography. Biosensors and Bioelectronics, 2020, 166, 112442.                                                            | 5.3 | 25        |
| 8  | Flex Printed Circuit Board Implemented Graphene-Based DNA Sensor for Detection of SARS-CoV-2. IEEE<br>Sensors Journal, 2021, 21, 13060-13067.                                                                                                          | 2.4 | 25        |
| 9  | Capillary-driven microfluidic device with integrated nanoporous microbeads for ultrarapid biosensing assays. Sensors and Actuators B: Chemical, 2018, 265, 452-458.                                                                                    | 4.0 | 22        |
| 10 | A regenerable microfluidic device with integrated valves and thin-film photodiodes for rapid optimization of chromatography conditions. Sensors and Actuators B: Chemical, 2018, 255, 3636-3646.                                                       | 4.0 | 22        |
| 11 | Studies on the purification of antibody fragments. Separation and Purification Technology, 2018, 195, 388-397.                                                                                                                                         | 3.9 | 19        |
| 12 | Development of a rapid bead-based microfluidic platform for DNA hybridization using single- and<br>multi-mode interactions for probe immobilization. Sensors and Actuators B: Chemical, 2019, 286,<br>328-336.                                         | 4.0 | 17        |
| 13 | Label-Free Detection of Biomolecules in Microfluidic Systems Using On-Chip UV and Impedimetric<br>Sensors. IEEE Sensors Journal, 2019, 19, 7803-7812.                                                                                                  | 2.4 | 13        |
| 14 | Multiplexed Microfluidic Cartridge for At-Line Protein Monitoring in Mammalian Cell Culture<br>Processes for Biopharmaceutical Production. ACS Sensors, 2021, 6, 842-851.                                                                              | 4.0 | 12        |
| 15 | Optical biosensing in microfluidics using nanoporous microbeads and amorphous silicon thin-film photodiodes: quantitative analysis of molecular recognition and signal transduction. Journal of Micromechanics and Microengineering, 2018, 28, 094004. | 1.5 | 11        |
| 16 | Exploring the use of heparin as a first capture step in the purification of monoclonal antibodies from cell culture supernatants. Biochemical Engineering Journal, 2015, 104, 27-33.                                                                   | 1.8 | 9         |
| 17 | Optimizing the Performance of Chromatographic Separations Using Microfluidics: Multiplexed and Quantitative Screening of Ligands and Target Molecules. Biotechnology Journal, 2019, 14, e1800593.                                                      | 1.8 | 7         |
| 18 | Student Collaboration in a Series of Integrated Experiments To Study Enzyme Reactor Modeling with<br>Immobilized Cell-Based Invertase. Journal of Chemical Education, 2015, 92, 1238-1243.                                                             | 1.1 | 6         |

| #  | Article                                                                                                                                                                                                                             | IF  | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Point-of-use Ultrafast Single-step Detection of Food Contaminants: A Novel Microfluidic<br>Fluorescence-based Immunoassay with Integrated Photodetection. Procedia Engineering, 2016, 168,<br>329-332.                              | 1.2 | 6         |
| 20 | Knowing more from less: miniaturization of ligand-binding assays and electrophoresis as new<br>paradigms for at-line monitoring and control of mammalian cell bioprocesses. Current Opinion in<br>Biotechnology, 2021, 71, 55-64.   | 3.3 | 5         |
| 21 | Microfluidics as a high-throughput solution for chromatographic process development – The<br>complexity of multimodal chromatography used as a proof of concept. Journal of Chromatography A,<br>2021, 1658, 462618.                | 1.8 | 4         |
| 22 | Integration of Photosensors in a Nano-liter Scale Chromatography Column for the Online<br>Monitoring of Adsorption/Desorption Kinetics of a Fluorophore-labeled Monoclonal Antibody.<br>Procedia Engineering, 2016, 168, 1426-1429. | 1.2 | 2         |
| 23 | Multiplexed microfluidic platform coupled with photodetector array for point-of-need and sub-minute detection of food contaminants. , 2018, , .                                                                                     |     | 0         |
| 24 | Quantitative analysis of optical transduction in microfluidic biosensing platforms: Nanoporous microbeads coupled with thin-film photodiodes. , 2018, , .                                                                           |     | 0         |
