

Xuzhang Shen

List of Publications by Citations

Source: <https://exaly.com/author-pdf/7165928/xuzhang-shen-publications-by-citations.pdf>

Version: 2024-04-26

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
26	Seismic evidence for the North China plate underthrusting beneath northeastern Tibet and its implications for plateau growth. <i>Earth and Planetary Science Letters</i> , 2015 , 426, 109-117	5.3	85
25	Mapping the upper mantle discontinuities beneath China with teleseismic receiver functions. <i>Earth, Planets and Space</i> , 2008 , 60, 713-719	2.9	33
24	Lithospheric structure across the northeastern margin of the Tibetan Plateau: Implications for the plateau's lateral growth. <i>Earth and Planetary Science Letters</i> , 2017 , 459, 80-92	5.3	31
23	Is the Asian lithosphere underthrusting beneath northeastern Tibetan Plateau? Insights from seismic receiver functions. <i>Earth and Planetary Science Letters</i> , 2015 , 428, 172-180	5.3	31
22	Seismic structure in the southeastern China using teleseismic receiver functions. <i>Tectonophysics</i> , 2013 , 606, 24-35	3.1	31
21	Anisotropic low-velocity lower crust beneath the northeastern margin of Tibetan Plateau: Evidence for crustal channel flow. <i>Geochemistry, Geophysics, Geosystems</i> , 2015 , 16, 4223-4236	3.6	27
20	A ubiquitous low-velocity layer at the base of the mantle transition zone. <i>Geophysical Research Letters</i> , 2014 , 41, 836-842	4.9	27
19	Anisotropic regime across northeastern Tibet and its geodynamic implications. <i>Tectonophysics</i> , 2016 , 671, 1-8	3.1	17
18	The low-velocity layer at the depth of 620 km beneath Northeast China. <i>Science Bulletin</i> , 2009 , 54, 3067-3075		16
17	Receiver function structures beneath the deep large faults in the northeastern margin of the Tibetan Plateau. <i>Tectonophysics</i> , 2014 , 610, 63-73	3.1	10
16	Imaging the Mantle Lithosphere below the China cratons using S-to-p converted waves. <i>Tectonophysics</i> , 2019 , 754, 73-79	3.1	8
15	Lithospheric velocity structure of the northeast margin of the Tibetan Plateau: Relevance to continental geodynamics and seismicity. <i>Tectonophysics</i> , 2017 , 712-713, 482-493	3.1	6
14	Data-oriented constraint on the interpretation of S receiver function and its application to observations of seismic discontinuities in the lithosphere–sthenosphere system. <i>Geophysical Journal International</i> , 2019 , 219, 496-513	2.6	4
13	Small-scale heterogeneities below the Lanzhou CTBTO seismic array, from seismic wave field fluctuations. <i>Journal of Seismology</i> , 2010 , 14, 481-493	1.5	3
12	An examination of the presence and topography of the D ₂ discontinuity under the Russia–Kazakhstan border region using seismic waveform data from a deep earthquake in Spain. <i>Earthquake Science</i> , 2014 , 27, 209-215	1.5	2
11	Lateral growth of NE Tibetan Plateau restricted by the Asian lithosphere: Results from a dense seismic profile. <i>Gondwana Research</i> , 2020 , 87, 238-247	5.1	2
10	Receiver functions of CCDSN and crustal structure of Chinese mainland. <i>Earthquake Science</i> , 2012 , 25, 3-16	1.5	1

9	Locating seismic scatterers at the base of the mantle beneath eastern Tibet with PKIKP precursors. <i>Science Bulletin</i> , 2010 , 55, 723-729		1
8	Constraining the characters of the upper mantle discontinuities beneath the NE margin of the Tibetan Plateau with a dense broadband seismic array. <i>Science China Earth Sciences</i> , 2020 , 63, 425-438	4.6	1
7	Dynamic model of the upper mantle beneath the northeastern Tibetan Plateau - constraints from the 410 km and 660 km discontinuities. <i>Gondwana Research</i> , 2022 , 106, 224-236	5.1	0
6	The Crustal Anisotropy of West Ordos Block and Its Geodynamic Implications. <i>Geochemistry, Geophysics, Geosystems</i> , 2021 , 22, e2020GC009553	3.6	0
5	Contrasting crustal structures crossing the boundary region of the southwest Ordos block and its tectonic implications revealed by dense seismic arrays. <i>Tectonophysics</i> , 2022 , 831, 229342	3.1	0
4	Preface to the special issue on recent advances of deep structure, seismic anisotropy and seismotectonics in China. <i>Earthquake Science</i> , 2012 , 25, 1-2	1.5	
3	Preliminary analysis of teleseismic receiver functions of the Ningxia and its adjacent area. <i>Earthquake Science</i> , 2012 , 25, 47-53	1.5	
2	Peeling linear inversion of upper mantle velocity structure with receiver functions. <i>Earthquake Science</i> , 2012 , 25, 65-74	1.5	
1	Reply to Comment on Small-scale heterogeneities below the Lanzhou CTBTO seismic array, from seismic wavefield fluctuation by Li Lei. <i>Journal of Seismology</i> , 2011 , 15, 171-172	1.5
