#	ARTICLE	IF	CITATIONS
1	Relationship of body fat and left ventricular hypertrophy with the risk of all-cause death in patients with coronary artery disease.. Journal of Geriatric Cardiology, 2022, 19, 218-226.	0.2	2
2	Rationale and design of the <sc>OPTIMAL–REPERFUSION</sc> trial: A prospective randomized multi–center clinical trial comparing different fibrinolysis–transfer percutaneous coronary intervention strategies in acute <sc>ST</sc>–segment elevation myocardial infarction. Clinical Cardiology, 2021, 44, 455-462.	1.8	4
3	Predictive value of pressure ulcer risk for obstructive coronary artery disease. Nursing Open, 2021, 8, 1848-1855.	2.4	3
4	Renal function as a predictor of outcomes in patients with hypertrophic cardiomyopathy: A cohort study of a hospitalized population. Clinica Chimica Acta, 2021, 512, 92-99.	1.1	5
5	Rationale and design of a multi–center, prospective randomized controlled trial on the effects of sacubitril–valsartan versus enalapril on left ventricular remodeling in <sc>ST</sc>–elevation myocardial infarction: The <sc>PERI–STEMI</sc> study. Clinical Cardiology, 2021, 44, 1709-1717.	1.8	6
6	Clinical characteristics and in-hospital outcomes of patients receiving contemporary intensive cardiac care: retrospective study from a large centre in China. Journal of Geriatric Cardiology, 2021, 18, 94-103.	0.2	2
7	Association of fine particulate matter exposure with acute noncardiovascular critical illnesses and in-hospital outcomes in patients receiving intensive cardiac care. BMC Public Health, 2020, 20, 610.	2.9	2
8	The impact of renal function on the prognostic value of N-terminal pro–B-type natriuretic peptide in patients with coronary artery disease. Cardiology Journal, 2020, 26, 696-703.	1.2	1
9	The triglyceride paradox in the mortality of coronary artery disease. Lipids in Health and Disease, 2019, 18, 21.	3.0	17
10	Influence of age on the effect of reduced renal function on outcomes in patients with coronary artery disease. BMC Public Health, 2019, 19, 205.	2.9	2
11	Variations of electrocardiographic parameters during hospitalization predict long–term outcomes in patients with non–ST–segment elevation myocardial infarction. Annals of Noninvasive Electrocardiology, 2019, 24, e12613.	1.1	2
12	No modifying effect of nutritional status on statins therapy in relation to all-cause death in older patients with coronary artery disease. Aging Clinical and Experimental Research, 2018, 30, 1071-1077.	2.9	1
13	Efficacy of Different Types of Exercise-Based Cardiac Rehabilitation on Coronary Heart Disease: a Network Meta-analysis. Journal of General Internal Medicine, 2018, 33, 2201-2209.	2.6	36
14	The impact of age on the implementation of evidence-based medications in patients with coronary artery disease and its prognostic significance: a retrospective cohort study. BMC Public Health, 2018, 18, 150.	2.9	11
15	CHADS2, CHA2DS2-VASc and R2CHADS2 scores predict mortality in patients with coronary artery disease. Internal and Emergency Medicine, 2017, 12, 479-486.	2.0	25
16	Trends in prescribing rate of statins at discharge and modifiable factors in patients with atherosclerotic cardiovascular disease. Internal and Emergency Medicine, 2017, 12, 1121-1129.	2.0	9
17	Body Composition and Mortality in Coronary Artery Disease With Mild Renal Insufficiency in Chinese Patients. , 2017, 27, 187-193.		5
18	The correlation between serum total bilirubin and outcomes in patients with different subtypes of coronary artery disease. Clinica Chimica Acta, 2017, 465, 101-105.	1.1	29

#	ARTICLE	IF	CITATIONS
19	Relation of premature atrial complexes with stroke and death: Systematic review and meta-analysis. <i>Clinical Cardiology</i> , 2017, 40, 962-969.	1.8	30
20	The impact of optimal medical therapy at discharge on mortality in patients with coronary artery disease. <i>Journal of Geriatric Cardiology</i> , 2017, 14, 100-107.	0.2	4
21	The influence of age on the clinical implications of N-terminal pro-B-type natriuretic peptide in acute coronary syndrome. <i>Internal and Emergency Medicine</i> , 2016, 11, 1077-1086.	2.0	4
22	Changes in Hospitalization for Ischemic Heart Disease After the 2008 Sichuan Earthquake: 10 Years of Data in a Population of 300,000. <i>Disaster Medicine and Public Health Preparedness</i> , 2016, 10, 203-210.	1.3	9
23	Research update for articles published in <sc>EJCI</sc> in 2014. <i>European Journal of Clinical Investigation</i> , 2016, 46, 880-894.	3.4	2
24	Understanding the controversy surrounding the correlation between fibrinogen level and prognosis of coronary artery disease—The role of the subtypes of coronary artery disease. <i>International Journal of Cardiology</i> , 2016, 222, 968-972.	1.7	3
25	Relation between admission plasma fibrinogen levels and mortality in Chinese patients with coronary artery disease. <i>Scientific Reports</i> , 2016, 6, 30506.	3.3	17
26	The effect of activated clotting time values for patients undergoing percutaneous coronary intervention: A systematic review and meta-analysis. <i>Thrombosis Research</i> , 2016, 144, 202-209.	1.7	5
27	Gender Disparity in the Safety and Efficacy of Radial and Femoral Access for Coronary Intervention. <i>Angiology</i> , 2016, 67, 810-819.	1.8	16
28	The influence of body composition on the N-terminal pro-B-type natriuretic peptide level and its prognostic performance in patients with acute coronary syndrome: a cohort study. <i>Cardiovascular Diabetology</i> , 2016, 15, 58.	6.8	9
29	Renal insufficiency and mortality in coronary artery disease with reduced ejection fraction. <i>European Journal of Internal Medicine</i> , 2016, 29, 78-87.	2.2	1
30	Association Between Bisphosphonates Therapy and Incident Myocardial Infarction. <i>Journal of Cardiovascular Pharmacology</i> , 2015, 66, 468-477.	1.9	4
31	Meta-Analysis of Relation Between Oral β -Blocker Therapy and Outcomes in Patients With Acute Myocardial Infarction Who Underwent Percutaneous Coronary Intervention. <i>American Journal of Cardiology</i> , 2015, 115, 1529-1538.	1.6	68
32	Relation between admission serum potassium levels and long-term mortality in acute coronary syndrome. <i>Internal and Emergency Medicine</i> , 2015, 10, 927-935.	2.0	19
33	Four Apolipoprotein B gene polymorphisms and the risk for coronary artery disease: a meta-analysis of 47 studies. <i>Genes and Genomics</i> , 2015, 37, 621-632.	1.4	7
34	Comment on Stegman et al. High-Intensity Statin Therapy Alters the Natural History of Diabetic Coronary Atherosclerosis: Insights From SATURN. <i>Diabetes Care</i> 2014;37:3114-3120. <i>Diabetes Care</i> , 2015, 38, e27-e27.	8.6	0
35	Telehealth interventions versus center-based cardiac rehabilitation of coronary artery disease: A systematic review and meta-analysis. <i>European Journal of Preventive Cardiology</i> , 2015, 22, 959-971.	1.8	175
36	Heparin is Not Inferior to Bivalirudin in Percutaneous Coronary Intervention—Focusing on the Effect of Glycoprotein IIb/IIIa Inhibitor Use. <i>Angiology</i> , 2015, 66, 845-855.	1.8	8

#	ARTICLE	IF	CITATIONS
37	Inappropriate left ventricular mass and poor outcomes in patients with angina pectoris and normal ejection fraction. <i>Coronary Artery Disease</i> , 2015, 26, 163-169.	0.7	3
38	Target lesion calcification and risk of adverse outcomes in patients with drug-eluting stents. Herz, 2015, 40, 1097-1106.	1.1	6
39	The efficacy and safety of prehospital therapeutic hypothermia in patients with out-of-hospital cardiac arrest: A systematic review and meta-analysis. <i>Resuscitation</i> , 2015, 96, 170-179.	3.0	22
40	Left Ventricular Remodeling and Dysfunction in Systemic Lupus Erythematosus: A Three-dimensional Speckle Tracking Study. <i>Echocardiography</i> , 2014, 31, 1085-1094.	0.9	41
41	Subclassification of left ventricular hypertrophy based on dilation stratifies coronary artery disease patients with distinct risk. <i>European Journal of Clinical Investigation</i> , 2014, 44, 893-901.	3.4	14
42	Balancing the Cardiovascular Risk and Dermatologic Hazard in Patients With Hypertension. <i>JAMA Dermatology</i> , 2014, 150, 1372.	4.1	4
43	Severity of heart failure and risk of incident diabetes: a reverse causation?. <i>Diabetologia</i> , 2014, 57, 2000-2000.	6.3	0
44	Adverse Cardiovascular Effects of Concomitant Use of Proton Pump Inhibitors and Clopidogrel in Patients with Coronary Artery Disease: A Systematic Review and Meta-Analysis. <i>Archives of Medical Research</i> , 2012, 43, 212-224.	3.3	34
