citing authors

| #  | ARTICLE   | IF   | CITATIONS |
|----|---|------|-----------|
| 1  | An introduction to the Universal Thermal Climate Index (UTCI). <i>Geographia Polonica</i> , 2013, 86, 5-10.   | 1.0  | 269       |
| 2  | Validation of the Fiala multi-node thermophysiological model for UTCI application. <i>International Journal of Biometeorology</i> , 2012, 56, 443-460.  | 3.0  | 123       |
| 3  | Prediction of human core body temperature using non-invasive measurement methods. <i>International Journal of Biometeorology</i> , 2014, 58, 7-15.  | 3.0  | 89        |
| 4  | Quantitative evaluation of air gap thickness and contact area between body and garment. <i>Textile Reseach Journal</i> , 2012, 82, 1405-1413.   | 2.2  | 83        |
| 5  | Physiological modeling for technical clinical and research applications. <i>Frontiers in Bioscience - Scholar</i> , 2010, S2, 939-968.  | 2.1  | 77        |
| 6  | Effect of heterogenous and homogenous air gaps on dry heat loss through the garment. <i>International Journal of Biometeorology</i> , 2015, 59, 1701-1710.  | 3.0  | 69        |
| 7  | Thermal manikins controlled by human thermoregulation models for energy efficiency and thermal comfort research – A review. <i>Renewable and Sustainable Energy Reviews</i> , 2017, 78, 1315-1330.        | 16.4 | 63        |
| 8  | Single-sector thermophysiological human simulator. <i>Physiological Measurement</i> , 2008, 29, 181-192.  | 2.1  | 54        |
| 9  | Effect of perspiration on skin temperature measurements by infrared thermography and contact thermometry during aerobic cycling. <i>Infrared Physics and Technology</i> , 2015, 72, 68-76.                | 2.9  | 53        |
| 10 | How to measure thermal effects of personal cooling systems: human, thermal manikin and human simulator study. <i>Physiological Measurement</i> , 2010, 31, 1161-1168.                                     | 2.1  | 48        |
| 11 | Effect of ambient temperature and attachment method on surface temperature measurements. <i>International Journal of Biometeorology</i> , 2014, 58, 877-885.  | 3.0  | 41        |
| 12 | Prediction of the Physiological Response of Humans Wearing Protective Clothing Using a Thermophysiological Human Simulator. <i>Journal of Occupational and Environmental Hygiene</i> , 2013, 10, 222-232. | 1.0  | 40        |
| 13 | Air gap thickness and contact area in undershirts with various moisture contents: influence of garment fit, fabric structure and fiber composition. <i>Textile Reseach Journal</i> , 2015, 85, 2196-2207. | 2.2  | 40        |
| 14 | Effect of garment properties on air gap thickness and the contact area distribution. <i>Textile Reseach Journal</i> , 2015, 85, 1907-1918.  | 2.2  | 40        |
| 15 | The effect of body postures on the distribution of air gap thickness and contact area. <i>International Journal of Biometeorology</i> , 2017, 61, 363-375.  | 3.0  | 39        |
| 16 | Thermal sensation models: Validation and sensitivity towards thermo-physiological parameters. <i>Building and Environment</i> , 2018, 130, 200-211.   | 6.9  | 35        |
| 17 | Contribution of garment fit and style to thermal comfort at the lower body. <i>International Journal of Biometeorology</i> , 2016, 60, 1995-2004.   | 3.0  | 34        |
| 18 | Validation of a novel 3D scanning method for determination of the air gap in clothing. <i>Measurement: Journal of the International Measurement Confederation</i> , 2015, 67, 61-70.                      | 5.0  | 33        |

| #  | ARTICLE  | IF  | CITATIONS |
|----|--|-----|-----------|
| 19 | Opportunities and constraints of presently used thermal manikins for thermo-physiological simulation of the human body. <i>International Journal of Biometeorology</i> , 2016, 60, 435-446.                  | 3.0 | 32        |
| 20 | Thermal sensation models: a systematic comparison. <i>Indoor Air</i> , 2017, 27, 680-689.  | 4.3 | 32        |
| 21 | Effects of the cycling workload on core and local skin temperatures. <i>Experimental Thermal and Fluid Science</i> , 2016, 77, 91-99.  | 2.7 | 29        |
| 22 | Validation of the thermophysiological model by Fiala for prediction of local skin temperatures. <i>International Journal of Biometeorology</i> , 2016, 60, 1969-1982.  | 3.0 | 27        |
| 23 | Energy and Environmental Analysis of Single-Family Houses Located in Poland. <i>Energies</i> , 2020, 13, 2740.   | 3.1 | 27        |
| 24 | Advanced modelling of the transport phenomena across horizontal clothing microclimates with natural convection. <i>International Journal of Biometeorology</i> , 2015, 59, 1875-1889.                        | 3.0 | 26        |
| 25 | Human responses in heat " comparison of the Predicted Heat Strain and the Fiala multi-node model for a case of intermittent work. <i>Journal of Thermal Biology</i> , 2017, 70, 45-52.                       | 2.5 | 25        |
| 26 | 3D body scanning. , 2018, , 237-252.   |     | 25        |
| 27 | Evaluation of the convective heat transfer coefficient of human body and its effect on the human thermoregulation predictions. <i>Building and Environment</i> , 2021, 196, 107778.                          | 6.9 | 25        |
| 28 | Moisture transfer of the clothing"human body system during continuous sweating under radiant heat. <i>Textile Research Journal</i> , 2019, 89, 4537-4553.  | 2.2 | 24        |
| 29 | Influence of human body geometry, posture and the surrounding environment on body heat loss based on a validated numerical model. <i>Building and Environment</i> , 2019, 166, 106340.                       | 6.9 | 23        |
| 30 | The effect of garment combinations on thermal comfort of office clothing. <i>Textile Research Journal</i> , 2019, 89, 4425-4437.   | 2.2 | 23        |
| 31 | Local air gap thickness and contact area models for realistic simulation of human thermo-physiological response. <i>International Journal of Biometeorology</i> , 2018, 62, 1121-1134.                       | 3.0 | 21        |
| 32 | Effect of perspired moisture and material properties on evaporative cooling and thermal protection of the clothed human body exposed to radiant heat. <i>Textile Research Journal</i> , 2019, 89, 3663-3676. | 2.2 | 21        |
| 33 | Local clothing thermal properties of typical office ensembles under realistic static and dynamic conditions. <i>International Journal of Biometeorology</i> , 2018, 62, 2215-2229.                           | 3.0 | 20        |
| 34 | Analytical clothing model for sensible heat transfer considering spatial heterogeneity. <i>International Journal of Thermal Sciences</i> , 2019, 145, 105949.  | 4.9 | 20        |
| 35 | Apparent evaporative cooling efficiency in clothing with continuous perspiration: A sweating manikin study. <i>International Journal of Thermal Sciences</i> , 2019, 137, 446-455.                           | 4.9 | 19        |
| 36 | Effect of movement on convection and ventilation in a skin-clothing-environment system. <i>International Journal of Thermal Sciences</i> , 2021, 166, 106965.  | 4.9 | 19        |

| #  | ARTICLE   | IF  | CITATIONS |
|----|---|-----|-----------|
| 37 | A validation methodology and application of 3D garment simulation software to determine the distribution of air layers in garments during walking. <i>Measurement: Journal of the International Measurement Confederation</i> , 2018, 117, 153-164. | 5.0 | 18        |
| 38 | Local clothing properties for thermo-physiological modelling: Comparison of methods and body positions. <i>Building and Environment</i> , 2019, 155, 376-388.   | 6.9 | 18        |
| 39 | Study on effect of blend ratio on thermal comfort properties of cotton/nylon-blended fabrics with high-performance Kermel fibre. <i>Journal of the Textile Institute</i> , 2015, 106, 674-682.  | 1.9 | 16        |
| 40 | Comparison of fabric skins for the simulation of sweating on thermal manikins. <i>International Journal of Biometeorology</i> , 2017, 61, 1519-1529.  | 3.0 | 16        |
| 41 | Determination of the effect of fabric properties on the coupled heat and moisture transport of underwearâ€“shirt fabric combinations. <i>Textile Research Journal</i> , 2018, 88, 1319-1331.  | 2.2 | 14        |
| 42 | Heat flux measurements for use in physiological and clothing research. <i>International Journal of Biometeorology</i> , 2014, 58, 1069-1075.  | 3.0 | 13        |
| 43 | A numerical investigation of the influence of wind on convective heat transfer from the human body in a ventilated room. <i>Building and Environment</i> , 2021, 188, 107427.   | 6.9 | 13        |
| 44 | Multi-sector thermo-physiological head simulator for headgear research. <i>International Journal of Biometeorology</i> , 2017, 61, 273-285.   | 3.0 | 12        |
| 45 | Contact skin temperature measurements and associated effects of obstructing local sweat evaporation during mild exercise-induced heat stress. <i>Physiological Measurement</i> , 2018, 39, 075003.  | 2.1 | 12        |
| 46 | Global and local heat transfer analysis for bicycle helmets using thermal head manikins. <i>International Journal of Industrial Ergonomics</i> , 2016, 53, 157-166.   | 2.6 | 11        |
| 47 | Numerical investigation of the effects of heterogeneous air gaps during high heat exposure for application in firefighter clothing. <i>International Journal of Heat and Mass Transfer</i> , 2021, 181, 121813.                                     | 4.8 | 11        |
| 48 | Human simulator â€“ A tool for predicting thermal sensation in the built environment. <i>Building and Environment</i> , 2018, 143, 632-644.   | 6.9 | 10        |
| 49 | An integrated approach to develop, validate and operate thermo-physiological human simulator for the development of protective clothing. <i>Industrial Health</i> , 2017, 55, 500-512.  | 1.0 | 9         |
| 50 | Determination of car seat contact area for personalised thermal sensation modelling. <i>PLoS ONE</i> , 2018, 13, e0208599.  | 2.5 | 7         |
| 51 | Thermal model of an unconditioned, heated and ventilated seat to predict human thermo-physiological response and local thermal sensation. <i>Building and Environment</i> , 2020, 169, 106571.  | 6.9 | 7         |
| 52 | A systematic approach to the development and validation of adaptive manikins. <i>Extreme Physiology and Medicine</i> , 2015, 4, .   | 2.5 | 6         |
| 53 | Validation of an instrumented dummy to assess mechanical aspects of discomfort during load carriage. <i>PLoS ONE</i> , 2017, 12, e0180069.  | 2.5 | 6         |
| 54 | Validation of a physiological model for controlling a thermal head simulator. <i>Extreme Physiology and Medicine</i> , 2015, 4, A73.  | 2.5 | 4         |

| #  | ARTICLE  | IF  | CITATIONS |
|----|--|-----|-----------|
| 55 | Artificial skin for sweating guarded hotplates and manikins based on weft knitted fabrics. Textile Reseach Journal, 2019, 89, 657-672.   | 2.2 | 4         |
| 56 | Assessment of the Coupled Heat and Mass Transfer Through Protective Garments Using Manikins and Other Advanced Measurement Devices. NATO Science for Peace and Security Series B: Physics and Biophysics, 2012, , 83-98. | 0.3 | 3         |
| 57 | Quantitative validation of 3D garment simulation software for determination of air gap thickness in lower body garments. IOP Conference Series: Materials Science and Engineering, 2017, 254, 162007.                    | 0.6 | 3         |
| 58 | Using a human thermoregulation model as a tool for design and refurbishment of industrial spaces for human occupancy. Energy and Buildings, 2018, 168, 76-85.  | 6.7 | 3         |
| 59 | Use of 3D Body Scanning Technique for Heat and Mass Transfer Modelling in Clothing. , 2012, , .  |     | 3         |
| 60 | A Thermal Skin Model for Comparing Contact Skin Temperature Sensors and Assessing Measurement Errors. Sensors, 2021, 21, 4906.   | 3.8 | 2         |
| 61 | Thermo-physiological simulation. , 2017, , 331-349.  |     | 1         |
| 62 | Two isothermal challenges yield comparable physiological and subjective responses. European Journal of Applied Physiology, 2020, 120, 2761-2772.   | 2.5 | 1         |
| 63 | Individualization of Thermophysiological Models for Thermal Sensation Assessment in Complex Environments: A Preliminary Study. , 2017, , .   |     | 0         |
