

Ritske Huismans

List of Publications by Citations

Source: <https://exaly.com/author-pdf/7443441/ritske-huismans-publications-by-citations.pdf>

Version: 2024-04-20

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
62	Depth-dependent extension, two-stage breakup and cratonic underplating at rifted margins. <i>Nature</i> , 2011 , 473, 74-8	50.4	399
61	Symmetric and asymmetric lithospheric extension: Relative effects of frictional-plastic and viscous strain softening. <i>Journal of Geophysical Research</i> , 2003 , 108,		189
60	Transition from passive to active rifting: Relative importance of asthenospheric doming and passive extension of the lithosphere. <i>Journal of Geophysical Research</i> , 2001 , 106, 11271-11291		131
59	Complex rifted continental margins explained by dynamical models of depth-dependent lithospheric extension. <i>Geology</i> , 2008 , 36, 163	5	117
58	Asymmetric lithospheric extension: The role of frictional plastic strain softening inferred from numerical experiments. <i>Geology</i> , 2002 , 30, 211	5	109
57	Rifted continental margins: The case for depth-dependent extension. <i>Earth and Planetary Science Letters</i> , 2014 , 407, 148-162	5.3	99
56	The fate of subducted sediments: A case for backarc intrusion and underplating. <i>Geology</i> , 2007 , 35, 1111-5		91
55	Effect of plastic-viscous layering and strain softening on mode selection during lithospheric extension. <i>Journal of Geophysical Research</i> , 2005 , 110,		88
54	Dynamic modeling of the transition from passive to active rifting, application to the Pannonian Basin. <i>Tectonics</i> , 2001 , 20, 1021-1039	4.3	83
53	Melt generation at volcanic continental margins: No need for a mantle plume?. <i>Geophysical Research Letters</i> , 2001 , 28, 3995-3998	4.9	80
52	DOUAR: A new three-dimensional creeping flow numerical model for the solution of geological problems. <i>Physics of the Earth and Planetary Interiors</i> , 2008 , 171, 76-91	2.3	74
51	Syntectonic sedimentation effects on the growth of fold-and-thrust belts. <i>Geology</i> , 2013 , 41, 83-86	5	69
50	Structural styles of mountain building: Controls of lithospheric rheologic stratification and extensional inheritance. <i>Journal of Geophysical Research</i> , 2012 , 117,		64
49	Roles of lithospheric strain softening and heterogeneity in determining the geometry of rifts and continental margins. <i>Geological Society Special Publication</i> , 2007 , 282, 111-138	1.7	64
48	Orogen-scale uplift in the central Italian Apennines drives episodic behaviour of earthquake faults. <i>Scientific Reports</i> , 2017 , 7, 44858	4.9	63
47	Bimodal Pliocene-Quaternary glacial erosion of fjords and low-relief surfaces in Scandinavia. <i>Nature Geoscience</i> , 2012 , 5, 635-639	18.3	63
46	A numerical model for coupled fluid flow and matrix deformation with applications to disequilibrium compaction and delta stability. <i>Journal of Geophysical Research</i> , 2007 , 112,		63

45	Thinning of continental backarc lithosphere by flow-induced gravitational instability. <i>Earth and Planetary Science Letters</i> , 2008 , 269, 436-447	5.3	56
44	Factors controlling the mode of rift interaction in brittle-ductile coupled systems: A 3D numerical study. <i>Geochemistry, Geophysics, Geosystems</i> , 2012 , 13,	3.6	52
43	Insights Into the Crustal-Scale Dynamics of a Doubly Vergent Orogen From a Quantitative Analysis of Its Forelands: A Case Study of the Eastern Pyrenees. <i>Tectonics</i> , 2018 , 37, 450-476	4.3	51
42	Extensional inheritance and surface processes as controlling factors of mountain belt structure. <i>Journal of Geophysical Research: Solid Earth</i> , 2014 , 119, 9042-9061	3.6	48
41	Low seismic velocities below mid-ocean ridges: Attenuation versus melt retention. <i>Journal of Geophysical Research</i> , 2012 , 117, n/a-n/a		45
40	Three-dimensional numerical modeling of upper crustal extensional systems. <i>Journal of Geophysical Research</i> , 2011 , 116,		42
39	Structural evolution of the Transylvanian Basin (Romania): a sedimentary basin in the bend zone of the Carpathians. <i>Tectonophysics</i> , 1997 , 272, 249-268	3.1	39
38	Dissipation analysis as a guide to mode selection during crustal extension and implications for the styles of sedimentary basins. <i>Journal of Geophysical Research</i> , 2008 , 113,		39
37	Lateral variation in structural style of mountain building: controls of rheological and rift inheritance. <i>Terra Nova</i> , 2014 , 26, 201-207	3	38
36	Dynamical modelling of lithospheric extension and small-scale convection: implications for magmatism during the formation of volcanic rifted margins. <i>Geophysical Journal International</i> , 2009 , 176, 327-350	2.6	37
35	Alpine exhumation of the central Cantabrian Mountains, Northwest Spain. <i>Tectonics</i> , 2016 , 35, 339-356	4.3	29
34	Controls of initial topography on temporal and spatial patterns of glacial erosion. <i>Geomorphology</i> , 2014 , 223, 96-116	4.3	27
33	Syntectonic sedimentation controls on the evolution of the southern Pyrenean fold-and-thrust belt: Inferences from coupled tectonic-surface processes models. <i>Journal of Geophysical Research: Solid Earth</i> , 2013 , 118, 5665-5680	3.6	24
32	Rotation, narrowing, and preferential reactivation of brittle structures during oblique rifting. <i>Earth and Planetary Science Letters</i> , 2020 , 531, 115952	5.3	22
31	Drainage integration and sediment dispersal in active continental rifts: A numerical modelling study of the central Italian Apennines. <i>Basin Research</i> , 2018 , 30, 965-989	3.2	21
30	Three-dimensional numerical simulations of crustal systems undergoing orogeny and subjected to surface processes. <i>Geochemistry, Geophysics, Geosystems</i> , 2014 , 15, 4936-4957	3.6	21
29	First-order control of syntectonic sedimentation on crustal-scale structure of mountain belts. <i>Journal of Geophysical Research: Solid Earth</i> , 2015 , 120, 5362-5377	3.6	20
28	Isostatic and dynamic support of high topography on a North Atlantic passive margin. <i>Earth and Planetary Science Letters</i> , 2016 , 446, 1-9	5.3	19

27	Evolving paleotopography and lithospheric flexure of the Pyrenean Orogen from 3D flexural modeling and basin analysis. <i>Earth and Planetary Science Letters</i> , 2019 , 515, 26-37	5.3	18
26	On the origin of the ultradeep East Barents Sea basin. <i>Journal of Geophysical Research</i> , 2012 , 117, n/a-n/a		18
25	Formation of intracratonic basins by lithospheric shortening and phase changes: a case study from the ultra-deep East Barents Sea basin. <i>Terra Nova</i> , 2013 , 25, 459-464	3	17
24	The Wilson Cycle and Effects of Tectonic Structural Inheritance on Rifted Passive Margin Formation. <i>Tectonics</i> , 2018 , 37, 3085-3101	4.3	16
23	Rifting assisted by shear heating and formation of the Lomonosov Ridge. <i>Earth and Planetary Science Letters</i> , 2013 , 373, 31-40	5.3	15
22	Long-Term Coupling and Feedback Between Tectonics and Surface Processes During Non-Volcanic Rifted Margin Formation. <i>Journal of Geophysical Research: Solid Earth</i> , 2019 , 124, 12323-12347	3.6	15
21	Control of increased sedimentation on orogenic fold-and-thrust belt structure Insights into the evolution of the Western Alps. <i>Solid Earth</i> , 2019 , 10, 391-404	3.3	11
20	Evaluating balanced section restoration with thermochronology data: A case study from the Central Pyrenees. <i>Tectonics</i> , 2014 , 33, 617-634	4.3	11
19	Effects of lithosphere buckling on subsidence and hydrocarbon maturation: A case-study from the ultra-deep East Barents Sea basin. <i>Earth and Planetary Science Letters</i> , 2014 , 407, 123-133	5.3	11
18	Crustal structure and evolution of the Arctic Caledonides: Results from controlled-source seismology. <i>Tectonophysics</i> , 2017 , 718, 9-24	3.1	10
17	Water Migration in the Subduction Mantle Wedge: A Two-Phase Flow Approach. <i>Journal of Geophysical Research: Solid Earth</i> , 2019 , 124, 9208-9225	3.6	10
16	3D numerical modelling of graben interaction and linkage: a case study of the Canyonlands grabens, Utah. <i>Basin Research</i> , 2013 , 25, 436-449	3.2	10
15	Salt domollement and rift inheritance controls on crustal deformation in orogens. <i>Terra Nova</i> , 2019 , 31, 562-568	3	9
14	The Transylvanian basin, transfer zone between coeval extending and contracting regions: Inferences on the relative importance of slab pull and rift push in arc-back arc systems. <i>Tectonics</i> , 2002 , 21, 2-1-2-18	4.3	9
13	Mountain Building or Backarc Extension in Ocean-Continent Subduction Systems: A Function of Backarc Lithospheric Strength and Absolute Plate Velocities. <i>Journal of Geophysical Research: Solid Earth</i> , 2019 , 124, 7461-7482	3.6	8
12	Morphotectonic Evolution of Passive Margins Undergoing Active Surface Processes: Large-Scale Experiments Using Numerical Models. <i>Geochemistry, Geophysics, Geosystems</i> , 2020 , 21, e2019GC008884	3.6	7
11	Growth of Collisional Orogens From Small and Cold to Large and Hot Inferences From Geodynamic Models. <i>Journal of Geophysical Research: Solid Earth</i> , 2021 , 126, e2020JB021168	3.6	7
10	Eocene to mid-Pliocene landscape evolution in Scandinavia inferred from offshore sediment volumes and pre-glacial topography using inverse modelling. <i>Geomorphology</i> , 2018 , 303, 467-485	4.3	7

9	Control of lithosphere rheology on subduction polarity at initiation: Insights from 3D analogue modelling. <i>Earth and Planetary Science Letters</i> , 2013 , 361, 219-228	5.3	4
8	Northeast Atlantic breakup volcanism and consequences for Paleogene climate change □ MagellanPlus Workshop report. <i>Scientific Drilling</i> , 26, 69-85		3
7	Widespread glacial erosion on the Scandinavian passive margin. <i>Geology</i> ,	5	3
6	Melt volume at Atlantic volcanic rifted margins controlled by depth-dependent extension and mantle temperature. <i>Nature Communications</i> , 2021 , 12, 3894	17.4	3
5	Crustal domains in the Western Barents Sea. <i>Geophysical Journal International</i> , 2020 , 221, 2155-2169	2.6	2
4	The Role of Subduction Interface and Upper Plate Strength on Back-Arc Extension: Application to Mediterranean Back-Arc Basins. <i>Tectonics</i> , 2021 , 40, e2021TC006795	4.3	2
3	Mantle exhumation at magma-poor rifted margins controlled by frictional shear zones.. <i>Nature Communications</i> , 2022 , 13, 1634	17.4	1
2	Reply to: Discussion of Eocene to mid-Pliocene landscape evolution in Scandinavia inferred from offshore sediment volumes and pre-glacial topography using inverse modeling (Pedersen et al. 2018, <i>Geomorphology</i> , 303: 467-485). <i>Geomorphology</i> , 2019 , 328, 225-230	4.3	0
1	Widespread glacial erosion on the Scandinavian passive margin: REPLY. <i>Geology</i> , 2022 , 50, e547-e547		5
