#	ARTICLE	IF	CITATIONS
1	Volcanic ash ice nucleation activity is variably reduced by aging in water and sulfuric acid: the effects of leaching, dissolution, and precipitation. <i>Environmental Science Atmospheres</i> , 2022, 2, 85-99.	2.4	5
2	Atmospheric aging enhances the ice nucleation ability of biomass-burning aerosol. <i>Science Advances</i> , 2021, 7, .	10.3	35
3	Single-particle elemental analysis of vacuum bag dust samples collected from the International Space Station by SEM/EDX and sp-ICP-ToF-MS. <i>Aerosol Science and Technology</i> , 2021, 55, 571-585.	3.1	13
4	Aerosolâ€“Ice Formation Closure: A Southern Great Plains Field Campaign. <i>Bulletin of the American Meteorological Society</i> , 2021, 102, E1952-E1971.	3.3	20
5	Morphology of Organic Carbon Coatings on Biomass-Burning Particles and Their Role in Reactive Gas Uptake. <i>ACS Earth and Space Chemistry</i> , 2021, 5, 2184-2195.	2.7	8
6	Response of the Reaction Probability of N ₂ O ₅ with Authentic Biomass-Burning Aerosol to High Relative Humidity. <i>ACS Earth and Space Chemistry</i> , 2021, 5, 2587-2598.	2.7	5
7	Metallic and Crustal Elements in Biomass-Burning Aerosol and Ash: Prevalence, Significance, and Similarity to Soil Particles. <i>ACS Earth and Space Chemistry</i> , 2021, 5, 136-148.	2.7	14
8	Development and characterization of a â€œstore and createâ€“microfluidic device to determine the heterogeneous freezing properties of ice nucleating particles. <i>Aerosol Science and Technology</i> , 2020, 54, 79-93.	3.1	18
9	In Situ pH Measurements of Individual Levitated Microdroplets Using Aerosol Optical Tweezers. <i>Analytical Chemistry</i> , 2020, 92, 1089-1096.	6.5	37
10	Aerosol Optical Tweezers Constrain the Morphology Evolution of Liquid-Liquid Phase-Separated Atmospheric Particles. <i>CheM</i> , 2020, 6, 204-220.	11.7	53
11	Aerosol Optical Tweezers Elucidate the Chemistry, Acidity, Phase Separations, and Morphology of Atmospheric Microdroplets. <i>Accounts of Chemical Research</i> , 2020, 53, 2498-2509.	15.6	28
12	Quantifying errors in the aerosol mixing-state index based on limited particle sample size. <i>Aerosol Science and Technology</i> , 2020, 54, 1527-1541.	3.1	2
13	Biomass combustion produces ice-active minerals in biomass-burning aerosol and bottom ash. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2020, 117, 21928-21937.	7.1	27
14	Moving beyond Fine Particle Mass: High-Spatial Resolution Exposure to Source-Resolved Atmospheric Particle Number and Chemical Mixing State. <i>Environmental Health Perspectives</i> , 2020, 128, 17009.	6.0	16
15	Characteristics of Ice Nucleating Particles in and Around California Winter Storms. <i>Journal of Geophysical Research D: Atmospheres</i> , 2019, 124, 11530-11551.	3.3	17
16	A comprehensive characterization of ice nucleation by three different types of cellulose particles immersed in water. <i>Atmospheric Chemistry and Physics</i> , 2019, 19, 4823-4849.	4.9	48
17	Heterogeneous ice nucleation properties of natural desert dust particles coated with a surrogate of secondary organic aerosol. <i>Atmospheric Chemistry and Physics</i> , 2019, 19, 5091-5110.	4.9	40
18	Sensitivity of Simulated Aerosol Properties Over Eastern North America to WRFâ€“Chem Parameterizations. <i>Journal of Geophysical Research D: Atmospheres</i> , 2019, 124, 3365-3383.	3.3	18

#	ARTICLE	IF	CITATIONS
19	Production of Secondary Organic Aerosol During Aging of Biomass Burning Smoke From Fresh Fuels and Its Relationship to VOC Precursors. Journal of Geophysical Research D: Atmospheres, 2019, 124, 3583-3606.	3.3	67
20	Using Ionic Liquids To Study the Migration of Semivolatile Organic Vapors in Smog Chamber Experiments. Journal of Physical Chemistry A, 2019, 123, 3887-3892.	2.5	0
21	Role of Feldspar and Pyroxene Minerals in the Ice Nucleating Ability of Three Volcanic Ashes. ACS Earth and Space Chemistry, 2019, 3, 626-636.	2.7	14
22	N ₂ O ₅ reactive uptake kinetics and chlorine activation on authentic biomass-burning aerosol. Environmental Sciences: Processes and Impacts, 2019, 21, 1684-1698.	3.5	14
23	Following Particle-Particle Mixing in Atmospheric Secondary Organic Aerosols by Using Isotopically Labeled Terpenes. Chem, 2018, 4, 318-333.	11.7	40
24	Mass accommodation coefficients of fresh and aged biomass-burning emissions. Aerosol Science and Technology, 2018, 52, 300-309.	3.1	10
25	Production of N ₂ O ₅ and ClNO ₂ through Nocturnal Processing of Biomass-Burning Aerosol. Environmental Science & Technology, 2018, 52, 550-559.	10.0	42
26	The Fifth International Workshop on Ice Nucleation phase 2 (FIN-02): laboratory intercomparison of ice nucleation measurements. Atmospheric Measurement Techniques, 2018, 11, 6231-6257.	3.1	82
27	Cleaning up our water: reducing interferences from nonhomogeneous freezing of “pure” water in droplet freezing assays of ice-nucleating particles. Atmospheric Measurement Techniques, 2018, 11, 5315-5334.	3.1	48
28	Spatial Variability of Sources and Mixing State of Atmospheric Particles in a Metropolitan Area. Environmental Science & Technology, 2018, 52, 6807-6815.	10.0	42
29	New particle formation leads to cloud dimming. Npj Climate and Atmospheric Science, 2018, 1, .	6.8	17
30	Emerging investigator series: determination of biphasic core-shell droplet properties using aerosol optical tweezers. Environmental Sciences: Processes and Impacts, 2018, 20, 1512-1523.	3.5	15
31	Characterization of Individual Aerosol Particles. , 2018, , 353-402.		5
32	A dual-chamber method for quantifying the effects of atmospheric perturbations on secondary organic aerosol formation from biomass burning emissions. Journal of Geophysical Research D: Atmospheres, 2017, 122, 6043-6058.	3.3	41
33	The impact of resolution on meteorological, chemical and aerosol properties in regional simulations with WRF-Chem. Atmospheric Chemistry and Physics, 2017, 17, 1511-1528.	4.9	19
34	A new multicomponent heterogeneous ice nucleation model and its application to Snomax bacterial particles and a Snomax-illite mineral particle mixture. Atmospheric Chemistry and Physics, 2017, 17, 13545-13557.	4.9	15
35	Modeling the contributions of global air temperature, synoptic-scale phenomena and soil moisture to near-surface static energy variability using artificial neural networks. Atmospheric Chemistry and Physics, 2017, 17, 14457-14471.	4.9	8
36	Emulsified and Liquid-Liquid Phase-Separated States of α -Pinene Secondary Organic Aerosol Determined Using Aerosol Optical Tweezers. Environmental Science & Technology, 2017, 51, 12154-12163.	10.0	57

#	ARTICLE	IF	CITATIONS
37	Effect of secondary organic aerosol coating thickness on the real-time detection and characterization of biomass-burning soot by two particle mass spectrometers. Atmospheric Measurement Techniques, 2016, 9, 6117-6137.	3.1	31
38	Advanced aerosol optical tweezers chamber design to facilitate phase-separation and equilibration timescale experiments on complex droplets. Aerosol Science and Technology, 2016, 50, 1327-1341.	3.1	43
39	Optical properties of black carbon in cookstove emissions coated with secondary organic aerosols: Measurements and modeling. Aerosol Science and Technology, 2016, 50, 1264-1276.	3.1	38
40	The unstable ice nucleation properties of Snomax® bacterial particles. Journal of Geophysical Research D: Atmospheres, 2016, 121, 11,666.	3.3	50
41	Mixing of secondary organic aerosols versus relative humidity. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, 12649-12654.	7.1	93
42	Evaluating the skill of high-resolution WRF-Chem simulations in describing drivers of aerosol direct climate forcing on the regional scale. Atmospheric Chemistry and Physics, 2016, 16, 397-416.	4.9	27
43	Effect of particle surface area on ice active site densities retrieved from droplet freezing spectra. Atmospheric Chemistry and Physics, 2016, 16, 13359-13378.	4.9	23
44	Quantifying the Roles of Changing Albedo, Emissivity, and Energy Partitioning in the Impact of Irrigation on Atmospheric Heat Content. Journal of Applied Meteorology and Climatology, 2016, 55, 1699-1706.	1.5	16
45	Sea spray aerosol as a unique source of ice nucleating particles. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, 5797-5803.	7.1	323
46	Integrating laboratory and field data to quantify the immersion freezing ice nucleation activity of mineral dust particles. Atmospheric Chemistry and Physics, 2015, 15, 393-409.	4.9	315
47	Brownness of organics in aerosols from biomass burning linked to their black carbon content. Nature Geoscience, 2014, 7, 647-650.	12.9	407
48	Influence of Functional Groups on Organic Aerosol Cloud Condensation Nucleus Activity. Environmental Science & Technology, 2014, 48, 10182-10190.	10.0	99
49	Trace gas emissions from combustion of peat, crop residue, domestic biofuels, grasses, and other fuels: configuration and Fourier transform infrared (FTIR) component of the fourth Fire Lab at Missoula Experiment (FLAME-4). Atmospheric Chemistry and Physics, 2014, 14, 9727-9754.	4.9	188
50	Dust and Biological Aerosols from the Sahara and Asia Influence Precipitation in the Western U.S.. Science, 2013, 339, 1572-1578.	12.6	482
51	Bringing the ocean into the laboratory to probe the chemical complexity of sea spray aerosol. Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 7550-7555.	7.1	439
52	The common occurrence of highly supercooled drizzle and rain near the coastal regions of the western United States. Journal of Geophysical Research D: Atmospheres, 2013, 118, 9819-9833.	3.3	30
53	Biomass burning as a potential source for atmospheric ice nuclei: Western wildfires and prescribed burns. Geophysical Research Letters, 2012, 39, .	4.0	49
54	Hygroscopicity frequency distributions of secondary organic aerosols. Journal of Geophysical Research, 2012, 117, .	3.3	44

#	ARTICLE	IF	CITATIONS
55	An annual cycle of size-resolved aerosol hygroscopicity at a forested site in Colorado. <i>Journal of Geophysical Research</i> , 2012, 117, .	3.3	65
56	Experimental study of the role of physicochemical surface processing on the IN ability of mineral dust particles. <i>Atmospheric Chemistry and Physics</i> , 2011, 11, 11131-11144.	4.9	70
57	Corrigendum to "Experimental study of the role of physicochemical surface processing on the IN ability of mineral dust particles" published in <i>Atmos. Chem. Phys.</i> , 11, 11131-11144, 2011. <i>Atmospheric Chemistry and Physics</i> , 2011, 11, 11919-11919.	4.9	4
58	Surface modification of mineral dust particles by sulphuric acid processing: implications for ice nucleation abilities. <i>Atmospheric Chemistry and Physics</i> , 2011, 11, 7839-7858.	4.9	60
59	Irreversible loss of ice nucleation active sites in mineral dust particles caused by sulphuric acid condensation. <i>Atmospheric Chemistry and Physics</i> , 2010, 10, 11471-11487.	4.9	175
60	Impact of Particle Generation Method on the Apparent Hygroscopicity of Insoluble Mineral Particles. <i>Aerosol Science and Technology</i> , 2010, 44, 830-846.	3.1	44
61	Chemical processing does not always impair heterogeneous ice nucleation of mineral dust particles. <i>Geophysical Research Letters</i> , 2010, 37, .	4.0	102
62	Role of molecular size in cloud droplet activation. <i>Geophysical Research Letters</i> , 2009, 36, .	4.0	69
63	Timescale for hygroscopic conversion of calcite mineral particles through heterogeneous reaction with nitric acid. <i>Physical Chemistry Chemical Physics</i> , 2009, 11, 7826.	2.8	82
64	Effect of chemical mixing state on the hygroscopicity and cloud nucleation properties of calcium mineral dust particles. <i>Atmospheric Chemistry and Physics</i> , 2009, 9, 3303-3316.	4.9	268
65	Direct observations of the atmospheric processing of Asian mineral dust. <i>Atmospheric Chemistry and Physics</i> , 2007, 7, 1213-1236.	4.9	424
66	Investigations of the Diurnal Cycle and Mixing State of Oxalic Acid in Individual Particles in Asian Aerosol Outflow. <i>Environmental Science & Technology</i> , 2007, 41, 8062-8069.	10.0	167
67	Mineral dust is a sink for chlorine in the marine boundary layer. <i>Atmospheric Environment</i> , 2007, 41, 7166-7179.	4.1	113
68	Recent Advances in Our Understanding of Atmospheric Chemistry and Climate Made Possible by On-Line Aerosol Analysis Instrumentation. <i>Analytical Chemistry</i> , 2005, 77, 3861-3886.	6.5	175
69	Initial uptake of ozone on Saharan dust at atmospheric relative humidities. <i>Geophysical Research Letters</i> , 2005, 32, n/a-n/a.	4.0	22
70	Ozone decomposition kinetics on alumina: effects of ozone partial pressure, relative humidity and repeated oxidation cycles. <i>Atmospheric Chemistry and Physics</i> , 2004, 4, 1301-1310.	4.9	74
