#	ARTICLE	IF	CITATIONS
1	Molecular potential energy surfaces by interpolation. Journal of Chemical Physics, 1994, 100, 8080-8088.	3.0	438
2	Molecular potential-energy surfaces for chemical reaction dynamics. Theoretical Chemistry Accounts, 2002, 108, 313-324.	1.4	370
3	Approximate ab initio energies by systematic molecular fragmentation. Journal of Chemical Physics, 2005, 122, 154102.	3.0	255
4	Energy-Based Molecular Fragmentation Methods. Chemical Reviews, 2015, 115, 5607-5642.	47.7	240
5	Polyatomic molecular potential energy surfaces by interpolation in local internal coordinates. Journal of Chemical Physics, 1998, 108, 8302-8316.	3.0	226
6	Convergence of molecular potential energy surfaces by interpolation: Application to the OH+H ₂ →H ₂ O+H reaction. Journal of Chemical Physics, 1995, 102, 5647-5657.	3.0	213
7	Learning to interpolate molecular potential energy surfaces with confidence: A Bayesian approach. Journal of Chemical Physics, 1999, 111, 816-826.	3.0	212
8	First-Principles Theory for the H + H ₂ O, D ₂ O Reactions. Science, 2000, 290, 961-963.	12.6	203
9	Accuracy and efficiency of electronic energies from systematic molecular fragmentation. Journal of Chemical Physics, 2006, 125, 104104.	3.0	160
10	Molecular potential-energy surfaces by interpolation: Further refinements. Journal of the Chemical Society, Faraday Transactions, 1997, 93, 871-878.	1.7	122
11	The utility of higher order derivatives in constructing molecular potential energy surfaces by interpolation. Journal of Chemical Physics, 1995, 103, 9669-9675.	3.0	99
12	Interpolation of multidimensional diabatic potential energy matrices. Journal of Chemical Physics, 2006, 125, 104105.	3.0	85
13	Molecular potential energy surfaces by interpolation in Cartesian coordinates. Journal of Chemical Physics, 1998, 108, 564-578.	3.0	83
14	Systematic fragmentation of large molecules by annihilation. Physical Chemistry Chemical Physics, 2012, 14, 7744.	2.8	82
15	An interpolated unrestricted Hartree-Fock potential energy surface for the OH+H ₂ →H ₂ O+H reaction. Journal of Chemical Physics, 1996, 104, 4600-4610.	3.0	69
16	The Combined Fragmentation and Systematic Molecular Fragmentation Methods. Accounts of Chemical Research, 2014, 47, 2776-2785.	15.6	69
17	Implications of rotation-inversion permutation invariance for analytic molecular potential energy surfaces. Journal of Chemical Physics, 1993, 99, 6756-6772.	3.0	67
18	Ab initio energies of nonconducting crystals by systematic fragmentation. Journal of Chemical Physics, 2007, 127, 134113.	3.0	66

#	ARTICLE	IF	CITATIONS
19	Accurate treatment of nonbonded interactions within systematic molecular fragmentation. Journal of Chemical Physics, 2009, 131, .	3.0	66
20	Systematic Fragmentation Method and the Effective Fragment Potential: An Efficient Method for Capturing Molecular Energies. Journal of Physical Chemistry A, 2009, 113, 10040-10049.	2.5	65
21	Interpolation of diabatic potential energy surfaces. Journal of Chemical Physics, 2004, 121, 2515.	3.0	64
22	Molecular potential energy surfaces constructed from interpolation of systematic fragment surfaces. Journal of Chemical Physics, 2007, 127, 024104.	3.0	61
23	The fragment molecular orbital and systematic molecular fragmentation methods applied to water clusters. Physical Chemistry Chemical Physics, 2012, 14, 7752.	2.8	61
24	Interpolation of diabatic potential-energy surfaces: Quantum dynamics on ab initio surfaces. Journal of Chemical Physics, 2005, 123, 134110.	3.0	53
25	Solitons in Chemical Physics. Advances in Chemical Physics, 2007, , 225-339.	0.3	46
26	Systematic Study of Locally Dense Basis Sets for NMR Shielding Constants. Journal of Chemical Theory and Computation, 2014, 10, 146-152.	5.3	44
27	Determination of the intrinsic reaction coordinate: Comparison of gradient and local quadratic approximation methods. Journal of Chemical Physics, 1988, 89, 2881-2885.	3.0	43
28	Interpolated potential energy surface and reaction dynamics for $O(3P)+H_3+(1A_1^{\prime\prime})$ and $OH+(3\Sigma^{\prime\prime})+H_2(1^{\prime\prime}g^+)$. Journal of Chemical Physics, 1999, 111, 6322-6332.	3.0	43
29	Probing the transition state via photoelectron and photodetachment spectroscopy of H_3O^- . Proceedings of the National Academy of Sciences of the United States of America, 2002, 99, 11579-11582.	7.1	43
30	Molecular forces, geometries, and frequencies by systematic molecular fragmentation including embedded charges. Journal of Chemical Physics, 2014, 141, 094108.	3.0	43
31	Potential energy surfaces and dynamics for the reactions between $C(3P)$ and $H_3+(1A_1^{\prime\prime})$. Journal of Chemical Physics, 1998, 108, 2424-2433.	3.0	42
32	Interpolated potential energy surface and dynamics for the reactions between $N(4S)$ and $H_3+(1A_1^{\prime\prime})$. Journal of Chemical Physics, 1998, 109, 9728-9736.	3.0	41
33	Interpolated potential energy surface and classical dynamics for H_3++HD and H_3++D_2 . Journal of Chemical Physics, 2003, 119, 5510-5517.	3.0	39
34	Converged quantum dynamics with modified Shepard interpolation and Gaussian wave packets. Chemical Physics Letters, 2010, 489, 242-247.	2.6	38
35	Calculation of accurate imaginary frequencies and tunnelling coefficients for hydrogen abstraction reactions using IRCmax. Molecular Physics, 2003, 101, 1329-1338.	1.7	37
36	Interpolated potential energy surface for abstraction and exchange reactions of $NH_3 + H$ and deuterated analogues. Theoretical Chemistry Accounts, 2005, 113, 225-232.	1.4	33

#	ARTICLE	IF	CITATIONS
37	Symmetry-invariant reaction-path potentials. <i>Journal of Chemical Physics</i> , 1991, 94, 7084-7097.	3.0	31
38	Potential energy surfaces for gas-surface reactions. <i>Physical Chemistry Chemical Physics</i> , 2011, 13, 8379.	2.8	29
39	Proton-transport catalysis and proton-abstraction reactions: An ab initio dynamical study of $X+HOC+$ and $XH++CO$ ($X=Ne, Ar, \text{ and } Kr$). <i>Journal of Chemical Physics</i> , 2000, 112, 6625-6634.	3.0	26
40	A classical trajectory study of sym-triazine photodissociation on an interpolated potential energy surface. <i>Chemical Physics Letters</i> , 2001, 335, 481-488.	2.6	25
41	Molecular potential energy surfaces by interpolation: Strategies for faster convergence. <i>Journal of Chemical Physics</i> , 2004, 121, 9769-9775.	3.0	24
42	An ab initio quasi-diabatic potential energy matrix for $OH(2^1\Sigma) + H_2$. <i>Journal of Chemical Physics</i> , 2011, 135, 234307.	3.0	24
43	A classical trajectory study of the high CH and CD overtones in benzene and perdeuterobenzene. <i>Journal of Chemical Physics</i> , 1987, 86, 6871-6881.	3.0	23
44	Simple model of coherent energy transfer by Fermi resonance. <i>Journal of Chemical Physics</i> , 1990, 92, 5602-5611.	3.0	23
45	Proton-transport catalysis, proton abstraction, and proton exchange in $HF+HOC+$ and $H_2O+HOC+$ and analogous deuterated reactions. <i>Journal of Chemical Physics</i> , 2003, 118, 6222-6229.	3.0	23
46	The Interface Between Electronic Structure Theory and Reaction Dynamics by Reaction Path Methods. <i>Advances in Chemical Physics</i> , 2007, , 389-453.	0.3	21
47	Ab initio lattice dynamics of nonconducting crystals by systematic fragmentation. <i>Journal of Chemical Physics</i> , 2011, 134, 164110.	3.0	20
48	CH and CD overtone decay times in partially deuterated benzenes. <i>Journal of Chemical Physics</i> , 1987, 87, 5312-5316.	3.0	19
49	Potential energy surfaces describing ion complexes containing molecular hydrogen. <i>Journal of Chemical Physics</i> , 1992, 97, 1191-1210.	3.0	19
50	The dynamics of the $H+D_2O^+\rightarrow OD+HD$ reaction at 2.5 eV: Experiment and theory. <i>Journal of Chemical Physics</i> , 2003, 118, 1162-1174.	3.0	19
51	Approximating CCSD(T) Nuclear Magnetic Shielding Calculations Using Composite Methods. <i>Journal of Chemical Theory and Computation</i> , 2015, 11, 5177-5181.	5.3	17
52	Calculating nuclear magnetic resonance shieldings using systematic molecular fragmentation by annihilation. <i>Physical Chemistry Chemical Physics</i> , 2015, 17, 5314-5320.	2.8	17
53	Microsolvation within the Systematic Molecular Fragmentation by Annihilation Approach. <i>Journal of Physical Chemistry A</i> , 2017, 121, 334-341.	2.5	16
54	Can Systematic Molecular Fragmentation Be Applied to Direct Ab Initio Molecular Dynamics?. <i>Journal of Physical Chemistry A</i> , 2016, 120, 9281-9291.	2.5	15

#	ARTICLE	IF	CITATIONS
55	Interpolated potential-energy surface and reaction dynamics for BH ₂ +H ₂ . Journal of Chemical Physics, 2001, 114, 10711-10716.	3.0	14
56	Classical trajectory studies of the photodissociation reaction of sym-triazine. Physical Chemistry Chemical Physics, 2004, 6, 945.	2.8	14
57	Growing Fragmented Potentials for Gas-Phase Surface Reactions: The Reaction between Hydrogen Atoms and Hydrogen-Terminated Silicon (111). Journal of Physical Chemistry C, 2012, 116, 7793-7802.	3.1	14
58	Nonlinear resonance and torsional dynamics: Model simulations of HOOH and CH ₃ OOCH ₃ . Journal of Chemical Physics, 1993, 98, 1132-1148.	3.0	13
59	A model classical study of nonlinear resonance and torsional isomerization. Journal of Chemical Physics, 1994, 101, 307-321.	3.0	13
60	Molecular electrostatic potentials by systematic molecular fragmentation. Journal of Chemical Physics, 2013, 139, 184117.	3.0	13
61	Simulation of coherent energy transfer in a hydrogen bonded amide chain by Fermi resonance. Journal of Chemical Physics, 1990, 93, 7894-7913.	3.0	12
62	Quantum simulations of nonlinear resonance and torsional dynamics. Journal of Chemical Physics, 1994, 100, 2089-2103.	3.0	12
63	Application of the Systematic Molecular Fragmentation by Annihilation Method to <i>ab Initio</i> NMR Chemical Shift Calculations. Journal of Physical Chemistry A, 2018, 122, 9135-9141.	2.5	12
64	Classical trajectory study of the decomposition of HCOH ⁺ on a symmetry-invariant potential-energy surface. Journal of Chemical Physics, 1992, 96, 1093-1104.	3.0	11
65	Construction of interpolated potential energy surfaces using constrained dynamics: Application to rotational inelastic scattering. Journal of Chemical Physics, 1999, 111, 1346-1353.	3.0	11
66	Locally Optimized Coordinates in Modified Shepard Interpolation. Journal of Physical Chemistry A, 2009, 113, 3979-3987.	2.5	11
67	Intramolecular vibrational energy redistribution and trapping in centrosymmetric chains by Fermi resonance. Journal of Chemical Physics, 1993, 98, 1817-1825.	3.0	10
68	Reaction path potentials in internal coordinates: Application to the dissociation of HCOH ⁺ . Journal of Chemical Physics, 1992, 97, 4913-4920.	3.0	9
69	Optical properties of poly-diacetylene monolayers. Journal of Polymer Science, Part B: Polymer Physics, 1988, 26, 367-387.	2.1	7
70	The SMFA program for quantum chemistry calculations on large molecules. Wiley Interdisciplinary Reviews: Computational Molecular Science, 2019, 9, e1413.	14.6	6
71	Scaling the reaction path potential. Journal of Chemical Physics, 1990, 93, 4938-4945.	3.0	5
72	H ₂ Adsorption in a Porous Crystal: Accurate First-Principles Quantum Simulation. Journal of Physical Chemistry A, 2015, 119, 12166-12181.	2.5	5
