| #  | Article                                                                                                                                                                                                                                               | IF  | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Distinguishing between recruitment and spread of silent chromatin structures in Saccharomyces cerevisiae. ELife, 2022, 11, .                                                                                                                          | 2.8 | 18        |
| 2  | A novel allele of <i>SIR2</i> reveals a heritable intermediate state of gene silencing. Genetics, 2021, 218,                                                                                                                                          | 1.2 | 1         |
| 3  | Nucleosome Positioning Regulates the Establishment, Stability, and Inheritance of Heterochromatin in<br><i>Saccharomyces cerevisiae</i> . Proceedings of the National Academy of Sciences of the United<br>States of America, 2020, 117, 27493-27501. | 3.3 | 19        |
| 4  | S-phase-independent silencing establishment in Saccharomyces cerevisiae. ELife, 2020, 9, .                                                                                                                                                            | 2.8 | 17        |
| 5  | Assessing computational predictions of the phenotypic effect of cystathionineâ€betaâ€synthase variants.<br>Human Mutation, 2019, 40, 1530-1545.                                                                                                       | 1.1 | 5         |
| 6  | The nucleosome core particle remembers its position through DNA replication and RNA transcription.<br>Proceedings of the National Academy of Sciences of the United States of America, 2019, 116, 20605-20611.                                        | 3.3 | 53        |
| 7  | Mutations in the PCNA DNA Polymerase Clamp of <i>Saccharomyces cerevisiae</i> Reveal Complexities of the Cell Cycle and Ploidy on Heterochromatin Assembly. Genetics, 2019, 213, 449-463.                                                             | 1.2 | 23        |
| 8  | Epigenetic memory independent of symmetric histone inheritance. ELife, 2019, 8, .                                                                                                                                                                     | 2.8 | 30        |
| 9  | Impact of Homologous Recombination on Silent Chromatin in <i>Saccharomyces cerevisiae</i> .<br>Genetics, 2018, 208, 1099-1113.                                                                                                                        | 1.2 | 1         |
| 10 | Pivotal roles of PCNA loading and unloading in heterochromatin function. Proceedings of the National Academy of Sciences of the United States of America, 2018, 115, E2030-E2039.                                                                     | 3.3 | 38        |
| 11 | Nutritional Control of Chronological Aging and Heterochromatin in <i>Saccharomyces cerevisiae</i> . Genetics, 2017, 205, 1179-1193.                                                                                                                   | 1.2 | 8         |
| 12 | Aggregation of the Whi3 protein, not loss of heterochromatin, causes sterility in old yeast cells.<br>Science, 2017, 355, 1184-1187.                                                                                                                  | 6.0 | 51        |
| 13 | Oncometabolite D-2-Hydroxyglutarate enhances gene silencing through inhibition of specific H3K36 histone demethylases. ELife, 2017, 6, .                                                                                                              | 2.8 | 25        |
| 14 | Riches of phenotype computationally extracted from microbial colonies. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, E2822-E2831.                                                                       | 3.3 | 7         |
| 15 | Sir protein–independent repair of dicentric chromosomes in Saccharomyces cerevisiae. Molecular<br>Biology of the Cell, 2016, 27, 2879-2883.                                                                                                           | 0.9 | 0         |
| 16 | Histone Deacetylases with Antagonistic Roles in <i>Saccharomyces cerevisiae</i> Heterochromatin<br>Formation. Genetics, 2016, 204, 177-190.                                                                                                           | 1.2 | 18        |
| 17 | Donor Preference Meets Heterochromatin: Moonlighting Activities of a Recombinational Enhancer in<br><i>Saccharomyces cerevisiae</i> . Genetics, 2016, 204, 1065-1074.                                                                                 | 1.2 | 4         |
| 18 | Evolution and Functional Trajectory of Sir1 in Gene Silencing. Molecular and Cellular Biology, 2016,<br>36, 1164-1179.                                                                                                                                | 1.1 | 11        |

| #  | Article                                                                                                                                                                                                          | IF  | CITATIONS |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | On the Mechanism of Gene Silencing in <i>Saccharomyces cerevisiae</i> . G3: Genes, Genomes, Genetics, 2015, 5, 1751-1763.                                                                                        | 0.8 | 13        |
| 20 | Maintenance of Nucleosomal Balance in <i>cis</i> by Conserved AAA-ATPase Yta7. Genetics, 2015, 199, 105-116.                                                                                                     | 1.2 | 18        |
| 21 | The Chromatin and Transcriptional Landscape of Native <i>Saccharomyces cerevisiae</i> Telomeres and Subtelomeric Domains. Genetics, 2015, 200, 505-521.                                                          | 1.2 | 92        |
| 22 | The State of Federal Research Funding in Genetics as Reflected by Members of the Genetics Society of America. Genetics, 2015, 200, 1015-1019.                                                                    | 1.2 | 0         |
| 23 | Metabolism and Epigenetics. Annual Review of Cell and Developmental Biology, 2015, 31, 473-496.                                                                                                                  | 4.0 | 147       |
| 24 | Heritable capture of heterochromatin dynamics in Saccharomyces cerevisiae. ELife, 2015, 4, e05007.                                                                                                               | 2.8 | 76        |
| 25 | Multiple inputs control sulfur-containing amino acid synthesis in <i>Saccharomyces cerevisiae</i> .<br>Molecular Biology of the Cell, 2014, 25, 1653-1665.                                                       | 0.9 | 39        |
| 26 | A future of the model organism model. Molecular Biology of the Cell, 2014, 25, 549-553.                                                                                                                          | 0.9 | 23        |
| 27 | The molecular topography of silenced chromatin in Saccharomyces cerevisiae. Genes and Development, 2014, 28, 245-258.                                                                                            | 2.7 | 66        |
| 28 | Highly expressed loci are vulnerable to misleading ChIP localization of multiple unrelated proteins.<br>Proceedings of the National Academy of Sciences of the United States of America, 2013, 110, 18602-18607. | 3.3 | 373       |
| 29 | Mono and Dual Cofactor Dependence of Human Cystathionine β-Synthase Enzyme Variants <i>In Vivo</i> and <i>In Vitro</i> . G3: Genes, Genomes, Genetics, 2013, 3, 1619-1628.                                       | 0.8 | 7         |
| 30 | Surrogate Genetics and Metabolic Profiling for Characterization of Human Disease Alleles. Genetics, 2012, 190, 1309-1323.                                                                                        | 1.2 | 46        |
| 31 | Two surfaces on the histone chaperone Rtt106 mediate histone binding, replication, and silencing.<br>Proceedings of the National Academy of Sciences of the United States of America, 2012, 109, E144-53.        | 3.3 | 43        |
| 32 | The establishment of gene silencing at single-cell resolution. Nature Genetics, 2009, 41, 800-806.                                                                                                               | 9.4 | 71        |
| 33 | Cell Cycle Requirements in Assembling Silent Chromatin in Saccharomyces cerevisiae. Molecular and<br>Cellular Biology, 2006, 26, 852-862.                                                                        | 1.1 | 45        |
| 34 | Telomeric heterochromatin boundaries require NuA4-dependent acetylation of histone variant H2A.Z<br>in Saccharomy cescerevisiae. Genes and Development, 2006, 20, 700-710.                                       | 2.7 | 176       |
| 35 | CELL BIOLOGY: Twists in the Tale of the Aging Yeast. Science, 2005, 310, 1124-1125.                                                                                                                              | 6.0 | 16        |
| 36 | The Establishment, Inheritance, and Function of Silenced Chromatin inSaccharomyces cerevisiae.<br>Annual Review of Biochemistry, 2003, 72, 481-516.                                                              | 5.0 | 678       |
