#	ARTICLE	IF	CITATIONS
1	The armed oncolytic adenovirus ZD55-IL-24 eradicates melanoma by turning the tumor cells from the self-state into the nonself-state besides direct killing. <i>Cell Death and Disease</i> , 2020, 11, 1022.	2.7	18
2	Adenovirus armed with VGLL4 selectively kills hepatocellular carcinoma with G2/M phase arrest and apoptosis promotion. <i>Biochemical and Biophysical Research Communications</i> , 2018, 503, 2758-2763.	1.0	12
3	SNORD126 promotes HCC and CRC cell growth by activating the PI3K-AKT pathway through FGFR2. <i>Journal of Molecular Cell Biology</i> , 2017, 9, 243-255.	1.5	71
4	RGD-modified oncolytic adenovirus-harboring shPKM2 exhibits a potent cytotoxic effect in pancreatic cancer via autophagy inhibition and apoptosis promotion. <i>Cell Death and Disease</i> , 2017, 8, e2835-e2835.	2.7	19
5	A Potent <i>In Vivo</i> Antitumor Efficacy of Novel Recombinant Type I Interferon. <i>Clinical Cancer Research</i> , 2017, 23, 2038-2049.	3.2	16
6	Overview of Interferon: Characteristics, signaling and anti-cancer effect. , 2017, 1, 001-016.		19
7	Interferon-related secretome from direct interaction between immune cells and tumor cells is required for upregulation of PD-L1 in tumor cells. <i>Protein and Cell</i> , 2016, 7, 538-543.	4.8	10
8	Targeting Gene-Viro-Therapy with AFP driving Apoptin gene shows potent antitumor effect in hepatocarcinoma. <i>Journal of Biomedical Science</i> , 2012, 19, 20.	2.6	22
