citing authors

| #  | ARTICLE   | IF  | CITATIONS |
|----|---|-----|-----------|
| 1  | A plant perspective on nitrogen cycling in the rhizosphere. <i>Functional Ecology</i> , 2019, 33, 540-552.  | 1.7 | 292       |
| 2  | Nitrogen partitioning and remobilization in relation to leaf senescence, grain yield and grain nitrogen concentration in wheat cultivars. <i>Field Crops Research</i> , 2014, 155, 213-223.   | 2.3 | 244       |
| 3  | Identification of traits to improve the nitrogen-use efficiency of wheat genotypes. <i>Field Crops Research</i> , 2011, 123, 139-152.   | 2.3 | 243       |
| 4  | Plant traits related to nitrogen uptake influence plant-microbe competition. <i>Ecology</i> , 2015, 96, 2300-2310.  | 1.5 | 114       |
| 5  | Response and effect traits of arable weeds in agroecosystems: a review of current knowledge. <i>Weed Research</i> , 2017, 57, 123-147.  | 0.8 | 95        |
| 6  | Calibration and evaluation of ArchiSimple, a simple model of root system architecture. <i>Ecological Modelling</i> , 2014, 290, 76-84.  | 1.2 | 81        |
| 7  | RhizoTubes as a new tool for high throughput imaging of plant root development and architecture: test, comparison with pot grown plants and validation. <i>Plant Methods</i> , 2016, 12, 31.  | 1.9 | 76        |
| 8  | Role of ley pastures in tomorrow's cropping systems. A review. <i>Agronomy for Sustainable Development</i> , 2020, 40, 1.   | 2.2 | 63        |
| 9  | The model symbiotic association between <i>Medicago truncatula</i> cv. Jemalong and <i>Rhizobium meliloti</i> strain 2011 leads to N-stressed plants when symbiotic N <sub>2</sub> fixation is the main N source for plant growth. <i>Journal of Experimental Botany</i> , 2008, 59, 3509-3522. | 2.4 | 60        |
| 10 | Acclimation of Leaf Nitrogen to Vertical Light Gradient at Anthesis in Wheat Is a Whole-Plant Process That Scales with the Size of the Canopy. <i>Plant Physiology</i> , 2012, 160, 1479-1490.  | 2.3 | 54        |
| 11 | A plant nitrophily index based on plant leaf area response to soil nitrogen availability. <i>Agronomy for Sustainable Development</i> , 2013, 33, 809-815.  | 2.2 | 37        |
| 12 | The FLORSYS crop-weed canopy model, a tool to investigate and promote agroecological weed management. <i>Field Crops Research</i> , 2021, 261, 108006.  | 2.3 | 34        |
| 13 | Trait-based characterisation of cover plants' light competition strategies for weed control in banana cropping systems in the French West Indies. <i>European Journal of Agronomy</i> , 2015, 71, 10-18.  | 1.9 | 33        |
| 14 | The response of weed and crop species to shading: Which parameters explain weed impacts on crop production?. <i>Field Crops Research</i> , 2019, 238, 45-55.  | 2.3 | 33        |
| 15 | What are the traits of <i>Phelipanche ramosa</i> (L.) Pomel that contribute to the success of its biological cycle on its host <i>Brassica napus</i> L.?. <i>Flora: Morphology, Distribution, Functional Ecology of Plants</i> , 2012, 207, 512-521.  | 0.6 | 31        |
| 16 | The ecophysiological determinants of nitrophily in annual weed species. <i>Weed Research</i> , 2014, 54, 335-346.   | 0.8 | 29        |
| 17 | Positive effects of plant association on rhizosphere microbial communities depend on plant species involved and soil nitrogen level. <i>Soil Biology and Biochemistry</i> , 2017, 114, 1-4.   | 4.2 | 28        |
| 18 | Using a standard framework for the phenotypic analysis of <i>Medicago truncatula</i> : an effective method for characterizing the plant material used for functional genomics approaches. <i>Plant, Cell and Environment</i> , 2006, 29, 1087-1098.   | 2.8 | 25        |

| #  | ARTICLE   | IF  | CITATIONS |
|----|---|-----|-----------|
| 19 | Using a physiological framework for improving the detection of quantitative trait loci related to nitrogen nutrition in <i>Medicago truncatula</i> . <i>Theoretical and Applied Genetics</i> , 2012, 124, 755-768.              | 1.8 | 20        |
| 20 | Plant nitrogen nutrition status in intercrops – a review of concepts and methods. <i>European Journal of Agronomy</i> , 2021, 124, 126229.  | 1.9 | 19        |
| 21 | A model-based framework for the phenotypic characterization of the flowering of <i>Medicago truncatula</i> . <i>Plant, Cell and Environment</i> , 2007, 30, 213-224.  | 2.8 | 18        |
| 22 | Deciphering field-based evidences for crop allelopathy in weed regulation. A review. <i>Agronomy for Sustainable Development</i> , 2022, 42, .  | 2.2 | 16        |
| 23 | Effects of species and soil nitrogen availability on root system architecture traits – study on a set of weed and crop species. <i>Annals of Applied Biology</i> , 2017, 171, 103-116.  | 1.3 | 15        |
| 24 | In which cropping systems can residual weeds reduce nitrate leaching and soil erosion?. <i>European Journal of Agronomy</i> , 2020, 119, 126015.  | 1.9 | 14        |
| 25 | Trait-based characterisation of soil exploitation strategies of banana, weeds and cover plant species. <i>PLoS ONE</i> , 2017, 12, e0173066.  | 1.1 | 13        |
| 26 | Analysis and modeling of the integrative response of <i>Medicago truncatula</i> to nitrogen constraints. <i>Comptes Rendus - Biologies</i> , 2009, 332, 1022-1033.  | 0.1 | 12        |
| 27 | Assessing broomrape risk due to weeds in cropping systems with an indicator linked to a simulation model. <i>Ecological Indicators</i> , 2017, 82, 280-292.   | 2.6 | 11        |
| 28 | Metamodelling a 3D architectural root-system model to provide a simple model based on key processes and species functional groups. <i>Plant and Soil</i> , 2020, 448, 231-251.  | 1.8 | 11        |
| 29 | Quantifying the nitrogen demand of individual plants in heterogeneous canopies: A case study with crop and weed species. <i>European Journal of Agronomy</i> , 2020, 119, 126102.   | 1.9 | 10        |
| 30 | Can differences of nitrogen nutrition level among <i>Medicago truncatula</i> genotypes be assessed non-destructively? Probing with a recombinant inbred lines population. <i>Plant Signaling and Behavior</i> , 2009, 4, 30-32. | 1.2 | 9         |
| 31 | ArchiSimple: A parsimonious model of the root system architecture. , 2012, , .  |     | 9         |
| 32 | The response of weed and crop species to shading. How to predict their morphology and plasticity from species traits and ecological indexes?. <i>European Journal of Agronomy</i> , 2020, 121, 126158.                          | 1.9 | 9         |
| 33 | Individual-based 3D modelling of root systems in heterogeneous plant canopies at the multiannual scale. Case study with a weed dynamics model. <i>Ecological Modelling</i> , 2021, 440, 109376.                                 | 1.2 | 9         |
| 34 | Integrating plant-plant competition for nitrogen into a 3D individual-based model simulating the effects of cropping systems on weed dynamics. <i>Field Crops Research</i> , 2021, 268, 108166.                                 | 2.3 | 8         |
| 35 | Weed suppression in cover crop mixtures under contrasted levels of resource availability. <i>European Journal of Agronomy</i> , 2022, 136, 126499.  | 1.9 | 7         |
| 36 | Trophic Relationships between the Parasitic Plant Species <i>Phelipanche ramosa</i> (L.) and Different Hosts Depending on Host Phenological Stage and Host Growth Rate. <i>Frontiers in Plant Science</i> , 2016, 7, 1033.      | 1.7 | 6         |

| #  | ARTICLE   | IF  | CITATIONS |
|----|---|-----|-----------|
| 37 | Morphological response of weed and crop species to nitrogen stress in interaction with shading. <i>Weed Research</i> , 2022, 62, 160-171.   | 0.8 | 5         |
| 38 | Designing a model to investigate cropping systems aiming to control both parasitic plants and weeds. <i>European Journal of Agronomy</i> , 2021, 129, 126318.                         | 1.9 | 3         |
| 39 | How to pit weeds against parasitic plants. A simulation study with <i>Phelipanche ramosa</i> in arable cropping systems. <i>European Journal of Agronomy</i> , 2021, 130, 126368.     | 1.9 | 2         |
| 40 | How to hierarchize the main physiological processes responsible for phenotypic differences in large-scale screening studies?. <i>Plant Signaling and Behavior</i> , 2012, 7, 311-313. | 1.2 | 1         |
| 41 | Tracking Ideal Varieties and Cropping Techniques for Agroecological Weed Management: A Simulation-Based Study on Pea. <i>Frontiers in Plant Science</i> , 2022, 13, 809056.           | 1.7 | 1         |
| 42 | A dataset on above- and below-ground traits of 21 species found in banana cropping systems, cultivated individually. <i>Data in Brief</i> , 2020, 31, 105890.                         | 0.5 | 0         |
