#	ARTICLE	IF	CITATIONS
1	Identification and Characterization of the UL56 Gene Product of Herpes Simplex Virus Type 2. <i>Journal of Virology</i> , 2002, 76, 6718-6728.	3.4	72
2	Herpes simplex virus encodes a virion-associated protein which promotes long cellular processes in over-expressing cells. <i>Genes To Cells</i> , 2001, 6, 955-966.	1.2	57
3	Subcellular Localization of Herpes Simplex Virus Type 1 UL51 Protein and Role of Palmitoylation in Golgi Apparatus Targeting. <i>Journal of Virology</i> , 2003, 77, 3204-3216.	3.4	56
4	Herpes simplex virus type 2 membrane protein UL56 associates with the kinesin motor protein KIF1A. <i>Journal of General Virology</i> , 2005, 86, 527-533.	2.9	54
5	Herpes Simplex Virus Type 2 UL56 Interacts with the Ubiquitin Ligase Nedd4 and Increases Its Ubiquitination. <i>Journal of Virology</i> , 2008, 82, 5220-5233.	3.4	37
6	Antibacterial effects of the artificial surface of nanoimprinted moth-eye film. <i>PLoS ONE</i> , 2017, 12, e0185366.	2.5	35
7	Herpes simplex virus type 2 US3 blocks apoptosis induced by sorbitol treatment. <i>Microbes and Infection</i> , 2002, 4, 707-712.	1.9	32
8	Characterization of varicella-zoster virus-encoded ORF0 gene—Comparison of parental and vaccine strains. <i>Virology</i> , 2010, 405, 280-288.	2.4	31
9	Iba1-expressing microglia respond to herpes simplex virus infection in the mouse trigeminal ganglion. <i>Molecular Brain Research</i> , 2003, 120, 52-56.	2.3	29
10	Herpes simplex virus protein UL11 but not UL51 is associated with lipid rafts. <i>Virus Genes</i> , 2007, 35, 571-575.	1.6	28
11	Association of Two Membrane Proteins Encoded by Herpes Simplex Virus Type 2, UL11 and UL56. <i>Virus Genes</i> , 2006, 32, 153-163.	1.6	23
12	Identification and characterization of the UL24 gene product of herpes simplex virus type 2. <i>Virus Genes</i> , 2001, 22, 321-327.	1.6	21
13	A Single Amino Acid Substitution in the ICP27 Protein of Herpes Simplex Virus Type 1 Is Responsible for Its Resistance to Leptomycin B. <i>Journal of Virology</i> , 2001, 75, 1039-1043.	3.4	19
14	Involvement of herpes simplex virus type 1 UL13 protein kinase in induction of SOCS genes, the negative regulators of cytokine signaling. <i>Microbiology and Immunology</i> , 2017, 61, 159-167.	1.4	19
15	Herpesviruses possess conserved proteins for interaction with Nedd4 family ubiquitin E3 ligases. <i>Scientific Reports</i> , 2018, 8, 4447.	3.3	19
16	Degradation of host ubiquitin E3 ligase Itch by human cytomegalovirus UL42. <i>Journal of General Virology</i> , 2016, 97, 196-208.	2.9	19
17	The US3 protein kinase of herpes simplex virus attenuates the activation of the c-Jun N-terminal protein kinase signal transduction pathway in infected piriform cortex neurons of C57BL/6 mice. <i>Neuroscience Letters</i> , 2003, 351, 201-205.	2.1	18
18	A Double-Blind Controlled Study to Evaluate the Effects of Yogurt Enriched with <i>Lactococcus lactis</i> 11/19-B1 and <i>Bifidobacterium lactis</i> on Serum Low-Density Lipoprotein Level and Antigen-Specific Interferon- β Releasing Ability. <i>Nutrients</i> , 2018, 10, 1778.	4.1	14

#	ARTICLE	IF	CITATIONS
19	The US11 Gene Product of Herpes Simplex Virus Has Intercellular Trafficking Activity. <i>Biochemical and Biophysical Research Communications</i> , 2001, 288, 597-602.	2.1	10
20	Relationship Between Human β -Defensin 2 and the Vaginal Environment. <i>Japanese Journal of Infectious Diseases</i> , 2020, 73, 214-220.	1.2	10
21	Varicella-zoster virus ORF1 gene product is a tail-anchored membrane protein localized to plasma membrane and trans-Golgi network in infected cells. <i>Virology</i> , 2008, 377, 289-295.	2.4	9
22	Rapid and efficient introduction of a foreign gene into bacterial artificial chromosome-cloned varicella vaccine by Tn7-mediated site-specific transposition. <i>Virology</i> , 2010, 402, 215-221.	2.4	8
23	Analysis of relationships between polymorphisms in the genes encoding the pentameric complex and neutralization of clinical cytomegalovirus isolates. <i>Vaccine</i> , 2018, 36, 5983-5989.	3.8	7
24	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. <i>PLoS ONE</i> , 2020, 15, e0232635.	2.5	6
25	Characterization of a thiourea derivative that targets viral transactivators of cytomegalovirus and herpes simplex virus type 1. <i>Antiviral Research</i> , 2021, 196, 105207.	4.1	6
26	Intercellular trafficking of herpes simplex virus type 2 UL14 deletion mutant proteins. <i>Biochemical and Biophysical Research Communications</i> , 2002, 298, 357-363.	2.1	5
27	Evaluation of the indirect and IgM-capture anti-human cytomegalovirus IgM ELISA methods as confirmed by cytomegalovirus IgG avidity. <i>Microbiology and Immunology</i> , 2019, 63, 172-178.	1.4	5
28	Detection of engraftment of donor-derived antibody producing cells in a lung transplant recipient by anti-cytomegalovirus IgG avidity test. <i>Transplant Immunology</i> , 2019, 53, 34-37.	1.2	5
29	Intercellular trafficking activity of herpes simplex virus US11 gene product in the mouse brain. <i>Molecular Brain Research</i> , 2005, 136, 158-163.	2.3	4
30	Human cytomegalovirus UL42 protein inhibits the degradation of glycoprotein B through inhibition of Nedd4 family ubiquitin E3 ligases. <i>Microbiology and Immunology</i> , 2021, 65, 472-480.	1.4	4
31	The Carboxyl-Terminal Penta-Peptide Repeats of Major Royal Jelly Protein 3 Enhance Cell Proliferation. <i>Biological and Pharmaceutical Bulletin</i> , 2020, 43, 1911-1916.	1.4	4
32	The C-Terminal Penta-Peptide Repeats of Major Royal Jelly Protein 3 Ameliorate the Progression of Inflammation &in vivo; and &in vitro;. <i>Biological and Pharmaceutical Bulletin</i> , 2022, 45, 583-589.	1.4	4
33	Modification of the HCMV-specific IFN- β release test (QuantIFERON-CMV) and a novel proposal for its application. <i>Fukushima Journal of Medical Sciences</i> , 2017, 63, 64-74.	0.4	3
34	Congenital cytomegalovirus infection via a re-infected mother with original antigenic sin: A case report. <i>International Journal of Infectious Diseases</i> , 2018, 77, 87-89.	3.3	2
35	A two-step culture method utilizing secreted luciferase recombinant virus for detection of anti-cytomegalovirus compounds. <i>Microbiology and Immunology</i> , 2018, 62, 651-658.	1.4	2
36	The Guinea pig cytomegalovirus GP119.1 gene encodes an IgG-binding glycoprotein that is incorporated into the virion. <i>Microbiology and Immunology</i> , 2021, 65, 28-39.	1.4	2

#	ARTICLE	IF	CITATIONS
37	Protection of Fatty Liver by the Intake of Fermented Soybean Paste, Miso, and Its Pre-Fermented Mixture. <i>Foods</i> , 2021, 10, 291.	4.3	2
38	Protection from lethal herpes simplex virus type 1 infection by vaccination with a UL41-deficient recombinant strain. <i>Fukushima Journal of Medical Sciences</i> , 2016, 62, 36-42.	0.4	2
39	Intimate Adhesion Is Essential for the Pathogen-Specific Inflammatory and Immune Responses in the Gut of Mice Infected with <i>Citrobacter rodentium</i> . <i>ImmunoHorizons</i> , 2021, 5, 870-883.	1.8	2
40	Enhancement of guinea pig cytomegalovirus infection by two endogenously expressed components of the pentameric glycoprotein complex in epithelial cells. <i>Scientific Reports</i> , 2020, 10, 8530.	3.3	1
41	Identification and functional analyses of a cell-death inhibitor encoded by guinea pig cytomegalovirus gp38.1 in cell culture and in animals. <i>Journal of General Virology</i> , 2020, 101, 1270-1279.	2.9	1
42	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
43	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
44	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
45	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
46	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
47	Activation of c-Jun by human cytomegalovirus UL42 through JNK activation. , 2020, 15, e0232635.		0
