#	Article	IF	Citations
1	Thermal conductivity of porous alumina ceramics prepared using starch as a pore-forming agent. Journal of the European Ceramic Society, 2009, 29, 347-353.	2.8	202
2	Elasticity of porous ceramicsâ€"A critical study of modulusâˆ'porosity relations. Journal of the European Ceramic Society, 2006, 26, 1085-1097.	2.8	159
3	Characterization of different starch types for their application in ceramic processing. Journal of the European Ceramic Society, 2006, 26, 1301-1309.	2.8	124
4	Particle shape and suspension rheology of short-fiber systems. Journal of the European Ceramic Society, 2006, 26, 149-160.	2.8	111
5	Porosity and pore size control in starch consolidation casting of oxide ceramicsâ€"Achievements and problems. Journal of the European Ceramic Society, 2007, 27, 669-672.	2.8	76
6	Isothermal and adiabatic Young's moduli of alumina and zirconia ceramics at elevated temperatures. Journal of the European Ceramic Society, 2013, 33, 3085-3093.	2.8	75
7	Young's modulus of isotropic porous materials with spheroidal pores. Journal of the European Ceramic Society, 2014, 34, 3195-3207.	2.8	62
8	Porous alumina ceramics prepared with wheat flour. Journal of the European Ceramic Society, 2010, 30, 2871-2880.	2.8	61
9	Porous ceramics prepared using poppy seed as a pore-forming agent. Ceramics International, 2007, 33, 1385-1388.	2.3	60
10	Critical Assessment 18: Elastic and thermal properties of porous materials â€" rigorous bounds and cross-property relations. Materials Science and Technology, 2015, 31, 1801-1808.	0.8	54
11	Elastic properties of porous oxide ceramics prepared using starch as a pore-forming agent. Journal of the European Ceramic Society, 2009, 29, 2765-2771.	2.8	51
12	New relation for the porosity dependence of the effective tensile modulus of brittle materials. Journal of Materials Science, 2004, 39, 3501-3503.	1.7	48
13	Starch as a Pore-forming and Body-forming Agent in Ceramic Technology. Starch/Staerke, 2009, 61, 495-502.	1.1	47
14	Microstructure characterization via stereological relations â€" A shortcut for beginners. Materials Characterization, 2015, 105, 1-12.	1.9	47
15	Youngâ€™s modulus and thermal conductivity of closed-cell, open-cell and inverse ceramic foams â€" model-based predictions, cross-property predictions and numerical calculations. Journal of the European Ceramic Society, 2018, 38, 2570-2578.	2.8	46
16	Mooney-type relation for the porosity dependence of the effective tensile modulus of ceramics. Journal of Materials Science, 2004, 39, 3213-3215.	1.7	45
17	Porosity and pore size dependence of the real in-line transmission of YAG and alumina ceramics. Journal of the European Ceramic Society, 2014, 34, 2745-2756.	2.8	41
18	Effective properties of suspensions, composites and porous materials. Journal of the European Ceramic Society, 2007, 27, 479-482.	2.8	40

#	Article	IF	Citations
19	Influence of the heating rate on grain size of alumina ceramics prepared via spark plasma sintering (SPS). Journal of the European Ceramic Society, 2020, 40, 3656-3662.	2.8	39
20	A cross-property relation between the tensile modulus and the thermal conductivity of porous materials. Ceramics International, 2007, 33, 9-12.	2.3	34
21	A note on particle size analyses of kaolins and clays. Journal of the European Ceramic Society, 2000, 20, 1429-1437.	2.8	33
22	Thermal Conductivity of Al_2O_3–ZrO_2 Composite Ceramics. Journal of the American Ceramic Society, 2011, 94, 4404-4409.	1.9	33
23	Young's modulus and thermal conductivity of model materials with convex or concave pores – from analytical predictions to numerical results. Journal of the European Ceramic Society, 2018, 38, 2694-2707.	2.8	33
24	Derivation of the simplest exponential and power-law relations for the effective tensile modulus of porous ceramics via functional equations. Journal of Materials Science Letters, 2003, 22, 1673-1675.	0.5	31
25	Size and shape characterization of polydisperse short-fiber systems. Journal of the European Ceramic Society, 2006, 26, 1121-1130.	2.8	31
26	Conductivity and Young's modulus of porous metamaterials based on Gibson-Ashby cells. Scripta Materialia, 2019, 159, 1-4.	2.6	31
27	Young's modulus evolution during heating, re-sintering and cooling of partially sintered alumina ceramics. Journal of the European Ceramic Society, 2019, 39, 1893-1899.	2.8	31
28	Alumina ceramics prepared with new pore-forming agents. Processing and Application of Ceramics, 2008, 2, 1-8.	0.4	31
29	Modeling light scattering by spherical pores for calculating the transmittance of transparent ceramics – All you need to know. Journal of the European Ceramic Society, 2021, 41, 2169-2192.	2.8	30
30	Microstructure characterization of mullite foam by image analysis, mercury porosimetry and X-ray computed microtomography. Ceramics International, 2018, 44, 12315-12328.	2.3	29
31	Modeling of Young's modulus and thermal conductivity evolution of partially sintered alumina ceramics with pore shape changes from concave to convex. Journal of the European Ceramic Society, 2018, 38, 3004-3011.	2.8	29
32	Note on the so-called Coble-Kingery formula for the effective tensile modulus of porous ceramics. Journal of Materials Science Letters, 2003, 22, 959-962.	0.5	28
33	Comparison of the effect of different alkali halides on the preparation of transparent $MgAl_2O_4$ spinel ceramics via spark plasma sintering (SPS). Journal of the European Ceramic Society, 2020, 40, 6043-6052.	2.8	27
34	Temperature dependence of Young's modulus and damping of partially sintered and dense zirconia ceramics. Journal of the European Ceramic Society, 2020, 40, 2063-2071.	2.8	27
35	A model for the body formation in starch consolidation casting. Journal of Materials Science Letters, 2002, 21, 1101-1103.	0.5	26
36	Light scattering models for describing the transmittance of transparent and translucent alumina and zirconia ceramics. Journal of the European Ceramic Society, 2021, 41, 2058-2075.	2.8	26

#	ARTICLE	IF	CITATIONS
37	Phase mixture modeling of the grain size dependence of Young's modulus and thermal conductivity of alumina and zirconia ceramics. Journal of the European Ceramic Society, 2020, 40, 3181-3190.	2.8	22
38	A new percolation-threshold relation for the porosity dependence of thermal conductivity. Ceramics International, 2006, 32, 89-91.	2.3	21
39	Low-and High-temperature Processes and Mechanisms in the Preparation of Porous Ceramics via Starch Consolidation Casting. Starch/Staerke, 2010, 62, 3-10.	1.1	21
40	Temperature dependence of Young×³s modulus of silica refractories. Ceramics International, 2015, 41, 1129-1138.	2.3	21
41	Microstructure and Young's modulus evolution during re-sintering of partially sintered alumina-zirconia composites (ATZ ceramics). Journal of the European Ceramic Society, 2021, 41, 3559-3569.	2.8	21
42	Thermal Properties of Transparent Yb-Doped <scp>YAG</scp> Ceramics at Elevated Temperatures. Journal of the American Ceramic Society, 2014, 97, 2602-2606.	1.9	20
43	Poisson's ratio of porous and cellular materials with randomly distributed isometric pores or cells. Journal of the American Ceramic Society, 2020, 103, 6961-6977.	1.9	20
44	Porous cordierite-based ceramics processed by starch consolidation casting – Microstructure and high-temperature mechanical behavior. Ceramics International, 2018, 44, 3893-3903.	2.3	19
45	Relative Young's modulus and thermal conductivity of isotropic porous ceramics with randomly oriented spheroidal pores – Model-based relations, cross-property predictions and numerical calculations. Journal of the European Ceramic Society, 2018, 38, 4026-4034.	2.8	19
46	Viscoelastic behavior of ceramic suspensions with carrageenan. Journal of the European Ceramic Society, 2006, 26, 1185-1194.	2.8	18
47	Starch swelling and its role in modern ceramic shaping technology. Macromolecular Symposia, 2003, 203, 295-300.	0.4	17
48	Elastic anomalies in tridymite- and cristobalite-based silica materials. Ceramics International, 2014, 40, 4207-4211.	2.3	17
49	Shear and bulk moduli of isotropic porous and cellular alumina ceramics predicted from thermal conductivity via cross-property relations. Ceramics International, 2018, 44, 8100-8108.	2.3	17
50	A GENERALIZED CLASS OF TRANSFORMATION MATRICES FOR THE RECONSTRUCTION OF SPHERE SIZE DISTRIBUTIONS FROM SECTION CIRCLE SIZE DISTRIBUTIONS. Ceramics - Silikaty, 2017, , 147-157.	0.2	17
51	High-temperature Young's moduli and dilatation behavior of silica refractories. Journal of the European Ceramic Society, 2016, 36, 209-220.	2.8	16
52	Describing the Effective Conductivity of Two-Phase and Multiphase Materials via Weighted Means of Bounds and General Power Means. Jom, 2019, 71, 4005-4014.	0.9	16
53	Reduction of temperature gradient and carbon contamination in electric current assisted sintering (ECAS/SPS) using a "saw-tooth" heating schedule. Ceramics International, 2019, 45, 22987-22990.	2.3	15
54	Theoretical study of the influence of carbon contamination on the transparency of spinel ceramics prepared by spark plasma sintering (SPS). Journal of the European Ceramic Society, 2021, 41, 4337-4342.	2.8	15

#	Article	IF	Citations
55	Crystallite size of pure tin oxide ceramics and its growth during sintering determined from XRD line broadening â€" A methodological case study and a practitionersâ€™ guide. Ceramics International, 2021, 47, 35333-35347.	2.3	15
56	Size and shape characterization of oblate and prolate particles. Journal of the European Ceramic Society, 2007, 27, 1759-1762.	2.8	14
57	The van de Hulst approximation for light scattering and its use for transmittance predictions in transparent ceramics. Journal of the European Ceramic Society, 2020, 40, 2141-2150.	2.8	14
58	Highly dense spinel ceramics with completely suppressed grain growth prepared via SPS with NaF as a sintering additive. Journal of the European Ceramic Society, 2020, 40, 3354-3357.	2.8	14
59	Temperature dependence of damping in silica refractories measured via the impulse excitation technique. Ceramics International, 2018, 44, 8363-8373.	2.3	13
60	Transparent $MgAl_2O_4$ spinel ceramics prepared via sinter-forging. Journal of the European Ceramic Society, 2021, 41, 4313-4318.	2.8	13
61	Benchmark polynomials for the porosity dependence of elastic moduli and conductivity of partially sintered ceramics. Journal of the European Ceramic Society, 2021, 41, 7967-7975.	2.8	13
62	Stereology of dense polycrystalline materialsâ€"from interface density and mean curvature integral density to Rayleigh distributions of grain sizes. Journal of the European Ceramic Society, 2016, 36, 2319-2328.	2.8	12
63	Light scattering and extinction in polydisperse systems. Journal of the European Ceramic Society, 2020, 40, 867-880.	2.8	12
64	The Eshelby relation in mixtures. International Journal of Non-Linear Mechanics, 1997, 32, 227-233.	1.4	11
65	Elastic properties of porous porcelain stoneware tiles. Ceramics International, 2017, 43, 6919-6924.	2.3	11
66	Light scattering in monodisperse systems â€" from suspensions to transparent ceramics. Journal of the European Ceramic Society, 2020, 40, 1522-1531.	2.8	11
67	MEAN VALUES, MOMENTS, MOMENT RATIOS AND A GENERALIZED MEAN VALUE THEOREM FOR SIZE DISTRIBUTIONS. Ceramics - Silikaty, 2019, , 419-425.	0.2	11
68	Magnesium fluoride (MgF_2) â€" A novel sintering additive for the preparation of transparent YAG ceramics via SPS. Journal of the European Ceramic Society, 2022, 42, 3290-3296.	2.8	11
69	Thermal conductivity and Young's modulus of cubic-cell metamaterials. Ceramics International, 2019, 45, 954-962.	2.3	10
70	Starch Consolidation Casting of Cordierite Precursor Mixturesâ€"Rheological Behavior and Green Body Properties. Journal of the American Ceramic Society, 2015, 98, 3014-3021.	1.9	9
71	Youngâ€™s modulus evolution during sintering and thermal cycling of pure tin oxide ceramics. Journal of the European Ceramic Society, 2021, 41, 7816-7827.	2.8	8
72	Transmittance predictions for transparent alumina ceramics based on the complete grain size distribution or a single mean grain size replacing the whole distribution. Journal of the European Ceramic Society, 2022, 42, 5093-5107.	2.8	8

#	Article	IF	Citations
73	The thermal conductivity of alumina–water nanofluids from the viewpoint of micromechanics. Microfluidics and Nanofluidics, 2014, 16, 19-28.	1.0	7
74	Phase equilibrium in non-fluids and non-fluid mixtures. International Journal of Non-Linear Mechanics, 2004, 39, 247-263.	1.4	6
75	Modeling of elastic properties and conductivity of partially sintered ceramics with duplex microstructure and different grain size ratio. Journal of the European Ceramic Society, 2022, 42, 2946-2956.	2.8	6
76	Anisometric Particle Systems—from Shape Characterization to Suspension Rheology. , 2009, , .		5
77	Application of Stereological Relations for the Characterization of Porous Materials via Microscopic Image Analysis. Key Engineering Materials, 2015, 647, 180-187.	0.4	5
78	Phase Mixture Models for the Thermal Conductivity of Nanofluids and Nanocrystalline Solids. , 2009, , .		4
79	Computer modeling of systematic processing defects on the thermal and elastic properties of open Kelvin-cell metamaterials. Journal of the European Ceramic Society, 2021, 41, 7130-7140.	2.8	4
80	A Simple Approximate Formula for the Aspect Ratio of Oblate Particles. Particle and Particle Systems Characterization, 2007, 24, 458-463.	1.2	3
81	Elastic Properties of Porous Alumina, Zirconia and Composite Ceramics. Key Engineering Materials, 0, 592-593, 618-621.	0.4	3
82	Grain growth of $MgAl_2O_4$ ceramics with LiF and NaF addition. Open Ceramics, 2021, 5, 100078.	1.0	3
83	High-Temperature Elastic Properties of Ceramics in the System $MgO-Al_2O_3-SiO_2$ Measured by Impulse Excitation. Key Engineering Materials, 0, 592-593, 696-699.	0.4	2
84	Quasi-laminate and quasi-columnate modeling of dielectric and piezoelectric properties of cubic-cell metamaterials. Journal of the European Ceramic Society, 2022, 42, 1396-1406.	2.8	2
85	Thermal Conductivity of Ceramic Nanocomposites – The Phase Mixture Modeling Approach. Advances in Science and Technology, 2010, 71, 68-73.	0.2	1
86	Layered Alumina Ceramics with Porosity Steps. Advances in Science and Technology, 0, , .	0.2	0
87	Quantitative microstructural characterization of transparent YAG ceramics via microscopic image analysis using stereological relations. , 2015, , .		0
88	A GENERALIZED CROSS-PROPERTY RELATION BETWEEN THE ELASTIC MODULI AND CONDUCTIVITY OF ISOTROPIC POROUS MATERIALS WITH SPHEROIDAL PORES. Ceramics - Silikaty, 2016, , 74-80.	0.2	0
