| #  | ARTICLE                                                                                                                                                                                                       | IF   | CITATIONS |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|-----------|
| 1  | Hepatitis C virus infection in patients with non-Hodgkin's lymphoma. <i>British Journal of Haematology</i> , 1994, 88, 392-394.                                                                               | 1.2  | 455       |
| 2  | Toward a New Generation of Electrically Controllable Hygromorphic Soft Actuators. <i>Advanced Materials</i> , 2015, 27, 1668-1675.                                                                            | 11.1 | 267       |
| 3  | Ultra-thin conductive free-standing PEDOT/PSS nanofilms. <i>Soft Matter</i> , 2011, 7, 10642.                                                                                                                 | 1.2  | 173       |
| 4  | Ultraconformable Temporary Tattoo Electrodes for Electrophysiology. <i>Advanced Science</i> , 2018, 5, 1700771.                                                                                               | 5.6  | 136       |
| 5  | Three-Dimensional (3D) Laser-Induced Graphene: Structure, Properties, and Application to Chemical Sensing. <i>ACS Applied Materials &amp; Interfaces</i> , 2021, 13, 30245-30260.                             | 4.0  | 128       |
| 6  | Electrically responsive photonic crystals: a review. <i>Journal of Materials Chemistry C</i> , 2015, 3, 8449-8467.                                                                                            | 2.7  | 116       |
| 7  | Microwrinkled Conducting Polymer Interface for Anisotropic Multicellular Alignment. <i>ACS Applied Materials &amp; Interfaces</i> , 2013, 5, 573-584.                                                         | 4.0  | 106       |
| 8  | Characterization of Free-Standing PEDOT:PSS/Iron Oxide Nanoparticle Composite Thin Films and Application As Conformable Humidity Sensors. <i>ACS Applied Materials &amp; Interfaces</i> , 2013, 5, 6324-6332. | 4.0  | 106       |
| 9  | 3D Micropatterned Surface Inspired by <i>Salvinia molesta</i> via Direct Laser Lithography. <i>ACS Applied Materials &amp; Interfaces</i> , 2015, 7, 25560-25567.                                             | 4.0  | 103       |
| 10 | Tattoo-Paper Transfer as a Versatile Platform for All-Printed Organic Edible Electronics. <i>Advanced Materials</i> , 2018, 30, e1706091.                                                                     | 11.1 | 92        |
| 11 | Tattoo Conductive Polymer Nanosheets for Skin-Contact Applications. <i>Advanced Healthcare Materials</i> , 2015, 4, 983-990.                                                                                  | 3.9  | 79        |
| 12 | Inkjet-printed PEDOT:PSS multi-electrode arrays for low-cost <i>in vitro</i> electrophysiology. <i>Lab on A Chip</i> , 2019, 19, 3776-3786.                                                                   | 3.1  | 71        |
| 13 | Stretchable and Skin-Conformable Conductors Based on Polyurethane/Laser-Induced Graphene. <i>ACS Applied Materials &amp; Interfaces</i> , 2020, 12, 19855-19865.                                              | 4.0  | 71        |
| 14 | Conducting polymer tattoo electrodes in clinical electro- and magneto-encephalography. <i>Npj Flexible Electronics</i> , 2020, 4, .                                                                           | 5.1  | 69        |
| 15 | Roll to roll processing of ultraconformable conducting polymer nanosheets. <i>Journal of Materials Chemistry C</i> , 2015, 3, 6539-6548.                                                                      | 2.7  | 68        |
| 16 | Ultra-conformable Organic Field-Effect Transistors and circuits for epidermal electronic applications. <i>Organic Electronics</i> , 2017, 46, 60-67.                                                          | 1.4  | 44        |
| 17 | Liquid single crystal elastomer/conducting polymer bilayer composite actuator: modelling and experiments. <i>Soft Matter</i> , 2013, 9, 11405.                                                                | 1.2  | 42        |
| 18 | Patterned Free-Standing Conductive Nanofilms for Ultraconformable Circuits and Smart Interfaces. <i>ACS Applied Materials &amp; Interfaces</i> , 2013, 5, 9461-9469.                                          | 4.0  | 35        |

| #  | ARTICLE                                                                                                                                                                                    | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Ionic Strength Responsive Sulfonated Polystyrene Opals. ACS Applied Materials & Interfaces, 2017, 9, 4818-4827.                                                                            | 4.0 | 34        |
| 20 | Conducting Shrinkable Nanocomposite Based on Au-Nanoparticle Implanted Plastic Sheet: Tunable Thermally Induced Surface Wrinkling. ACS Applied Materials & Interfaces, 2015, 7, 7060-7065. | 4.0 | 33        |
| 21 | Micro-wrinkled palladium surface for hydrogen sensing and switched detection of lower flammability limit. International Journal of Hydrogen Energy, 2012, 37, 17529-17539.                 | 3.8 | 31        |
| 22 | Thin film free-standing PEDOT:PSS/SU8 bilayer microactuators. Journal of Micromechanics and Microengineering, 2013, 23, 117004.                                                            | 1.5 | 29        |
| 23 | Temporary tattoo as unconventional substrate for conformable and transferable electronics on skin and beyond. Multifunctional Materials, 2020, 3, 032003.                                  | 2.4 | 25        |
| 24 | Multiresponsive Soft Actuators Based on a Thermoresponsive Hydrogel and Embedded Laser-Induced Graphene. ACS Applied Polymer Materials, 2021, 3, 1809-1818.                                | 2.0 | 25        |
| 25 | Applicability of Vapor-Deposited Thermoresponsive Hydrogel Thin Films in Ultrafast Humidity Sensors/Actuators. ACS Applied Polymer Materials, 2020, 2, 1160-1168.                          | 2.0 | 23        |
| 26 | Toward the Use of Temporary Tattoo Electrodes for Impedancemetric Respiration Monitoring and Other Electrophysiological Recordings on Skin. Sensors, 2021, 21, 1197.                       | 2.1 | 20        |
| 27 | Tattoo-Like Transferable Hole Selective Electrodes for Highly Efficient, Solution-Processed Organic Indoor Photovoltaics. Advanced Electronic Materials, 2018, 4, 1700325.                 | 2.6 | 19        |
| 28 | Ultrathin, Ultra-Conformable, and Free-Standing Tattooable Organic Light-Emitting Diodes. Advanced Electronic Materials, 2021, 7, 2001145.                                                 | 2.6 | 19        |
| 29 | A soft, stretchable and conductive biointerface for cell mechanobiology. Biomedical Microdevices, 2015, 17, 46.                                                                            | 1.4 | 17        |
| 30 | Topographical and Electrical Stimulation of Neuronal Cells through Microwrinkled Conducting Polymer Biointerfaces. Macromolecular Bioscience, 2017, 17, 1700128.                           | 2.1 | 17        |
| 31 | Approximating gecko setae via direct laser lithography. Smart Materials and Structures, 2018, 27, 075009.                                                                                  | 1.8 | 16        |
| 32 | Temporary Tattoo pH Sensor with pH-Responsive Hydrogel via Initiated Chemical Vapor Deposition. Advanced Materials Technologies, 2022, 7, 2100717.                                         | 3.0 | 16        |
| 33 | Photorefractivity of poly-N-vinylindole-based materials as compared with that of poly-N-vinylcarbazole-based blends. Applied Optics, 2006, 45, 7928.                                       | 2.1 | 12        |
| 34 | Reversible Heat-Induced Microwrinkling of PEDOT:PSS Nanofilm Surface Over a Monodomain Liquid Crystal Elastomer. Molecular Crystals and Liquid Crystals, 2013, 572, 40-49.                 | 0.4 | 12        |
| 35 | Low-voltage dielectric elastomer actuators with stretchable electrodes fabricated by supersonic cluster beam implantation. Journal of Applied Physics, 2018, 124, .                        | 1.1 | 12        |
| 36 | Ultraconformable Freestanding Capacitors Based on Ultrathin Polyvinyl Formal Films. Advanced Electronic Materials, 2018, 4, 1800215.                                                       | 2.6 | 10        |

| #  | ARTICLE                                                                                                                                                                                                                       | IF  | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | Introduction to Active Smart Materials for Biomedical Applications. <i>Nanomedicine and Nanotoxicology</i> , 2012, , 1-27.                                                                                                    | 0.1 | 9         |
| 38 | Plasma assisted deposition of free-standing nanofilms for biomedical applications. <i>Plasma Processes and Polymers</i> , 2016, 13, 1224-1229.                                                                                | 1.6 | 9         |
| 39 | Air Trapping Mechanism in Artificial Salvinia-Like Micro-Hairs Fabricated via Direct Laser Lithography. <i>Micromachines</i> , 2017, 8, 366.                                                                                  | 1.4 | 8         |
| 40 | Mechanical and electro-mechanical properties of EAP actuators with inkjet printed electrodes. <i>Synthetic Metals</i> , 2018, 246, 122-127.                                                                                   | 2.1 | 8         |
| 41 | Capacitive Coupling of Conducting Polymer Tattoo Electrodes with the Skin. <i>Advanced Materials Interfaces</i> , 2021, 8, 2100352.                                                                                           | 1.9 | 8         |
| 42 | Fabrication of layered polydimethylsiloxane/perfluoropolyether microfluidic devices with solvent compatibility and valve functionality. <i>Microfluidics and Nanofluidics</i> , 2013, 15, 753-762.                            | 1.0 | 7         |
| 43 | Unconditionally stable indole-derived glass blends having very high photorefractive gain: the role of intermolecular interactions. <i>Applied Optics</i> , 2008, 47, 6680.                                                    | 2.1 | 6         |
| 44 | Freestanding Functionalized Nanofilms for Biomedical Applications. <i>Procedia Computer Science</i> , 2011, 7, 337-339.                                                                                                       | 1.2 | 6         |
| 45 | All-Polymer Printed Low-Cost Regenerative Nerve Cuff Electrodes. <i>Frontiers in Bioengineering and Biotechnology</i> , 2021, 9, 615218.                                                                                      | 2.0 | 6         |
| 46 | Dry Adhesion of Artificial Gecko Setae Fabricated via Direct Laser Lithography. <i>Lecture Notes in Computer Science</i> , 2017, , 631-636.                                                                                   | 1.0 | 6         |
| 47 | The Relevance of the Collaborative Effect in Determining the Performances of Photorefractive Polymer Materials. <i>ChemPhysChem</i> , 2010, 11, 460-465.                                                                      | 1.0 | 5         |
| 48 | Sacrificial Layer and Supporting Layer Techniques for the Fabrication of Ultra-Thin Free-Standing PEDOT:PSS Nanosheets. <i>Materials Research Society Symposia Proceedings</i> , 2012, 1403, 55.                              | 0.1 | 5         |
| 49 | Temporary Tattoo Approach for a Transferable Printed Organic Photodiode. <i>ACS Applied Electronic Materials</i> , 2021, 3, 2652-2660.                                                                                        | 2.0 | 5         |
| 50 | Ultraconformable organic devices. , 2021, , 437-478.                                                                                                                                                                          |     | 3         |
| 51 | UStEMG: an Ultrasound Transparent Tattoo-based sEMG System for Unobtrusive Parallel Acquisitions of Muscle Electro-mechanics. , 2021, 2021, 7077-7082.                                                                        |     | 3         |
| 52 | Anisotropic Cellular Alignment on Nano-Wrinkled Polymeric Surface. <i>Materials Research Society Symposia Proceedings</i> , 2012, 1415, 54.                                                                                   | 0.1 | 2         |
| 53 | Micro and Nanowrinkled Conductive Polymer Surfaces on Shape-memory Polymer Substrates: Tuning of Surface Microfeatures Towards Smart Biointerfaces.. <i>Materials Research Society Symposia Proceedings</i> , 2012, 1411, 13. | 0.1 | 2         |
| 54 | Bending actuation of a composite liquid crystal elastomer via direct Joule heating. , 2012, , .                                                                                                                               |     | 2         |

| #  | ARTICLE                                                                                                                                                                                                                                                | IF  | CITATIONS |
