#	ARTICLE	IF	CITATIONS
1	Absence of COVID-19-associated changes in plasma coagulation proteins and pulmonary thrombosis in the ferret model. <i>Thrombosis Research</i> , 2022, 210, 6-11.	0.8	3
2	Location matters in RSV protection. <i>Cell Host and Microbe</i> , 2022, 30, 15-16.	5.1	3
3	Modeling Infection and Tropism of Human Parainfluenza Virus Type 3 in Ferrets. <i>MBio</i> , 2022, 13, e0383121.	1.8	5
4	Repurposing an In Vitro Measles Virus Dissemination Assay for Screening of Antiviral Compounds. <i>Viruses</i> , 2022, 14, 1186.	1.5	4
5	Potency of Fusion-Inhibitory Lipopeptides against SARS-CoV-2 Variants of Concern. <i>MBio</i> , 2022, 13, .	1.8	9
6	Intranasal fusion inhibitory lipopeptide prevents direct-contact SARS-CoV-2 transmission in ferrets. <i>Science</i> , 2021, 371, 1379-1382.	6.0	158
7	Human Respiratory Syncytial Virus Subgroup A and B Infections in Nasal, Bronchial, Small-Airway, and Organoid-Derived Respiratory Cultures. <i>MSphere</i> , 2021, 6, .	1.3	14
8	SARS-CoV-2 variants of concern partially escape humoral but not T cell responses in COVID-19 convalescent donors and vaccine recipients. <i>Science Immunology</i> , 2021, 6, .	5.6	455
9	Comparable Infection Level and Tropism of Measles Virus and Canine Distemper Virus in Organotypic Brain Slice Cultures Obtained from Natural Host Species. <i>Viruses</i> , 2021, 13, 1582.	1.5	1
10	2021 Taxonomic update of phylum Negarnaviricota (Riboviria: Orthornavirae), including the large orders Bunyavirales and Mononegavirales. <i>Archives of Virology</i> , 2021, 166, 3513-3566.	0.9	62
11	In Vitro Modelling of Respiratory Virus Infections in Human Airway Epithelial Cells – A Systematic Review. <i>Frontiers in Immunology</i> , 2021, 12, 683002.	2.2	28
12	Sustained Replication of Synthetic Canine Distemper Virus Defective Genomes <i>In Vitro</i> and <i>In Vivo</i> . <i>MSphere</i> , 2021, 6, e0053721.	1.3	9
13	Animal models of SARS-CoV-2 transmission. <i>Current Opinion in Virology</i> , 2021, 50, 8-16.	2.6	21
14	Measles seroprevalence among Dutch travelling families. <i>Travel Medicine and Infectious Disease</i> , 2021, 44, 102194.	1.5	2
15	How the COVID-19 pandemic highlights the necessity of animal research. <i>Current Biology</i> , 2020, 30, R1014-R1018.	1.8	26
16	2020 taxonomic update for phylum Negarnaviricota (Riboviria: Orthornavirae), including the large orders Bunyavirales and Mononegavirales. <i>Archives of Virology</i> , 2020, 165, 3023-3072.	0.9	184
17	Editorial overview: Combating measles during a COVID-19 pandemic. <i>Current Opinion in Virology</i> , 2020, 41, iii-vii.	2.6	3
18	Human Paramyxovirus Infections Induce T Cells That Cross-React with Zoonotic Henipaviruses. <i>MBio</i> , 2020, 11, .	1.8	4

#	ARTICLE	IF	CITATIONS
19	Measles pathogenesis, immune suppression and animal models. <i>Current Opinion in Virology</i> , 2020, 41, 31-37.	2.6	19
20	Comparative pathogenesis of COVID-19, MERS, and SARS in a nonhuman primate model. <i>Science</i> , 2020, 368, 1012-1015.	6.0	802
21	In vivo comparison of a laboratory-adapted and clinical-isolate-based recombinant human respiratory syncytial virus. <i>Journal of General Virology</i> , 2020, 101, 1037-1046.	1.3	4
22	Phenotype and kinetics of SARS-CoV-2-specific T cells in COVID-19 patients with acute respiratory distress syndrome. <i>Science Immunology</i> , 2020, 5, .	5.6	851
23	Measles skin rash: Infection of lymphoid and myeloid cells in the dermis precedes viral dissemination to the epidermis. <i>PLoS Pathogens</i> , 2020, 16, e1008253.	2.1	13
24	Morbillivirus Infections in Non-human Primates: From Humans to Monkeys and Back Again. , 2020, , 205-231.		0
25	Measles virus infection diminishes preexisting antibodies that offer protection from other pathogens. <i>Science</i> , 2019, 366, 599-606.	6.0	294
26	Incomplete genetic reconstitution of B cell pools contributes to prolonged immunosuppression after measles. <i>Science Immunology</i> , 2019, 4, .	5.6	98
27	Additional Evidence on Serological Correlates of Protection against Measles: An Observational Cohort Study among Once Vaccinated Children Exposed to Measles. <i>Vaccines</i> , 2019, 7, 158.	2.1	7
28	Taxonomy of the order Mononegavirales: second update 2018. <i>Archives of Virology</i> , 2019, 164, 1233-1244.	0.9	70
29	Species-Specific Colocalization of Middle East Respiratory Syndrome Coronavirus Attachment and Entry Receptors. <i>Journal of Virology</i> , 2019, 93, .	1.5	33
30	Taxonomy of the order Mononegavirales: update 2019. <i>Archives of Virology</i> , 2019, 164, 1967-1980.	0.9	224
31	Interferon-Induced Transmembrane Protein 1 Restricts Replication of Viruses That Enter Cells via the Plasma Membrane. <i>Journal of Virology</i> , 2019, 93, .	1.5	48
32	<i>In Vitro</i> Measles Virus Infection of Human Lymphocyte Subsets Demonstrates High Susceptibility and Permissiveness of both Naive and Memory B Cells. <i>Journal of Virology</i> , 2018, 92, .	1.5	43
33	Complete Genome Sequences of Six Measles Virus Strains. <i>Genome Announcements</i> , 2018, 6, .	0.8	8
34	Impact and longevity of measles-associated immune suppression: a matched cohort study using data from the THIN general practice database in the UK. <i>BMJ Open</i> , 2018, 8, e021465.	0.8	38
35	Studies into the mechanism of measles-associated immune suppression during a measles outbreak in the Netherlands. <i>Nature Communications</i> , 2018, 9, 4944.	5.8	83
36	Modeling the measles paradox reveals the importance of cellular immunity in regulating viral clearance. <i>PLoS Pathogens</i> , 2018, 14, e1007493.	2.1	11

#	ARTICLE	IF	CITATIONS
37	Paramyxovirus Infections in Ex Vivo Lung Slice Cultures of Different Host Species. <i>Methods and Protocols</i> , 2018, 1, 12.	0.9	9
38	Drivers of airborne human-to-human pathogen transmission. <i>Current Opinion in Virology</i> , 2017, 22, 22-29.	2.6	81
39	Modified Vaccinia Virus Ankara Preferentially Targets Antigen Presenting Cells In Vitro, Ex Vivo and In Vivo. <i>Scientific Reports</i> , 2017, 7, 8580.	1.6	34
40	Needle-free delivery of measles virus vaccine to the lower respiratory tract of non-human primates elicits optimal immunity and protection. <i>Npj Vaccines</i> , 2017, 2, 22.	2.9	32
41	Measles: What we have learned from non-human primate models. <i>Drug Discovery Today: Disease Models</i> , 2017, 23, 31-34.	1.2	6
42	Delineating morbillivirus entry, dissemination and airborne transmission by studying in vivo competition of multicolor canine distemper viruses in ferrets. <i>PLoS Pathogens</i> , 2017, 13, e1006371.	2.1	37
43	Ferrets as a Novel Animal Model for Studying Human Respiratory Syncytial Virus Infections in Immunocompetent and Immunocompromised Hosts. <i>Viruses</i> , 2016, 8, 168.	1.5	42
44	Measles Virus Host Invasion and Pathogenesis. <i>Viruses</i> , 2016, 8, 210.	1.5	123
45	Measles. <i>Nature Reviews Disease Primers</i> , 2016, 2, 16049.	18.1	184
46	Intrathecal CD4 ⁺ and CD8 ⁺ T cell responses to endogenously synthesized candidate disease-associated human autoantigens in multiple sclerosis patients. <i>European Journal of Immunology</i> , 2016, 46, 347-353.	1.6	11
47	Optimization and Dose Estimation of Aerosol Delivery to Non-Human Primates. <i>Journal of Aerosol Medicine and Pulmonary Drug Delivery</i> , 2016, 29, 281-287.	0.7	20
48	Limited <i>In Vivo</i> Production of Type I or Type III Interferon After Infection of Macaques with Vaccine or Wild-Type Strains of Measles Virus. <i>Journal of Interferon and Cytokine Research</i> , 2015, 35, 292-301.	0.5	20
49	Morbillivirus Infections: An Introduction. <i>Viruses</i> , 2015, 7, 699-706.	1.5	69
50	Recombinant Subgroup B Human Respiratory Syncytial Virus Expressing Enhanced Green Fluorescent Protein Efficiently Replicates in Primary Human Cells and Is Virulent in Cotton Rats. <i>Journal of Virology</i> , 2015, 89, 2849-2856.	1.5	26
51	Pathological consequences of systemic measles virus infection. <i>Journal of Pathology</i> , 2015, 235, 253-265.	2.1	69
52	Long-term measles-induced immunomodulation increases overall childhood infectious disease mortality. <i>Science</i> , 2015, 348, 694-699.	6.0	319
53	Live-Attenuated Measles Virus Vaccine Targets Dendritic Cells and Macrophages in Muscle of Nonhuman Primates. <i>Journal of Virology</i> , 2015, 89, 2192-2200.	1.5	53
54	<i>Streptococcus pneumoniae</i> Enhances Human Respiratory Syncytial Virus Infection In Vitro and In Vivo. <i>PLoS ONE</i> , 2015, 10, e0127098.	1.1	42

#	ARTICLE	IF	CITATIONS
55	Phocine Distemper Virus: Current Knowledge and Future Directions. <i>Viruses</i> , 2014, 6, 5093-5134.	1.5	114
56	Measles Immune Suppression: Functional Impairment or Numbers Game?. <i>PLoS Pathogens</i> , 2014, 10, e1004482.	2.1	53
57	Novel Vaccine Regimen Elicits Strong Airway Immune Responses and Control of Respiratory Syncytial Virus in Nonhuman Primates. <i>Journal of Virology</i> , 2014, 88, 3997-4007.	1.5	23
58	Using the ferret model to study morbillivirus entry, spread, transmission and cross-species infection. <i>Current Opinion in Virology</i> , 2014, 4, 15-23.	2.6	40
59	Measles Virus Suppresses RIG-I-like Receptor Activation in Dendritic Cells via DC-SIGN-Mediated Inhibition of PP1 Phosphatases. <i>Cell Host and Microbe</i> , 2014, 16, 31-42.	5.1	89
60	Measles Vaccination of Nonhuman Primates Provides Partial Protection against Infection with Canine Distemper Virus. <i>Journal of Virology</i> , 2014, 88, 4423-4433.	1.5	44
61	Development of a multivalent paediatric human vaccine for rabies virus in combination with Measles“Mumps”Rubella (MMR). <i>Vaccine</i> , 2014, 32, 2020-2021.	1.7	10
62	The use of temperature loggers in laboratory animal experiments for pathogenesis research and evaluation of prevention and treatment of infectious diseases. <i>Journal of Pharmacological and Toxicological Methods</i> , 2014, 70, 350.	0.3	0
63	Infection of lymphoid tissues in the macaque upper respiratory tract contributes to the emergence of transmissible measles virus. <i>Journal of General Virology</i> , 2013, 94, 1933-1944.	1.3	39
64	Paramyxovirus infections in ex vivo lung slice cultures of different host species. <i>Journal of Virological Methods</i> , 2013, 193, 159-165.	1.0	25
65	Infection-enhancing lipopeptides do not improve intranasal immunization of cotton rats with a delta-G candidate live-attenuated human respiratory syncytial virus vaccine. <i>Human Vaccines and Immunotherapeutics</i> , 2013, 9, 2578-2583.	1.4	1
66	Complete Genome Sequence of Phocine Distemper Virus Isolated from a Harbor Seal (<i>Phoca vitulina</i>) during the 1988 North Sea Epidemic. <i>Genome Announcements</i> , 2013, 1, .	0.8	9
67	T-Cell Tropism of Simian Varicella Virus during Primary Infection. <i>PLoS Pathogens</i> , 2013, 9, e1003368.	2.1	44
68	Measles Virus Infection of Epithelial Cells in the Macaque Upper Respiratory Tract Is Mediated by Subepithelial Immune Cells. <i>Journal of Virology</i> , 2013, 87, 4033-4042.	1.5	59
69	Measles Immune Suppression: Lessons from the Macaque Model. <i>PLoS Pathogens</i> , 2012, 8, e1002885.	2.1	146
70	Recombinant Canine Distemper Virus Strain Snyder Hill Expressing Green or Red Fluorescent Proteins Causes Meningoencephalitis in the Ferret. <i>Journal of Virology</i> , 2012, 86, 7508-7519.	1.5	44
71	Evaluating measles vaccines: can we assess cellular immunity?. <i>Expert Review of Vaccines</i> , 2012, 11, 779-782.	2.0	11
72	The pathogenesis of measles. <i>Current Opinion in Virology</i> , 2012, 2, 248-255.	2.6	90

#	ARTICLE	IF	CITATIONS
73	Rinderpest eradication: lessons for measles eradication?. <i>Current Opinion in Virology</i> , 2012, 2, 330-334.	2.6	42
74	Evaluation of synthetic infection-enhancing lipopeptides as adjuvants for a live-attenuated canine distemper virus vaccine administered intra-nasally to ferrets. <i>Vaccine</i> , 2012, 30, 5073-5080.	1.7	8
75	A Prominent Role for DC-SIGN+ Dendritic Cells in Initiation and Dissemination of Measles Virus Infection in Non-Human Primates. <i>PLoS ONE</i> , 2012, 7, e49573.	1.1	35
76	Streptococcus pneumoniae exposure is associated with human metapneumovirus seroconversion and increased susceptibility to in vitro HMPV infection. <i>Clinical Microbiology and Infection</i> , 2011, 17, 1840-1844.	2.8	51
77	Human Langerhans cells capture measles virus through Langerin and present viral antigens to CD4 ⁺ T cells but are incapable of cross-presentation. <i>European Journal of Immunology</i> , 2011, 41, 2619-2631.	1.6	85
78	Early Target Cells of Measles Virus after Aerosol Infection of Non-Human Primates. <i>PLoS Pathogens</i> , 2011, 7, e1001263.	2.1	181
79	Specific CD8 ⁺ T lymphocytes control dissemination of measles virus. <i>European Journal of Immunology</i> , 2010, 40, 388-395.	1.6	29
80	In Vivo Tropism of Attenuated and Pathogenic Measles Virus Expressing Green Fluorescent Protein in Macaques. <i>Journal of Virology</i> , 2010, 84, 4714-4724.	1.5	95
81	The Synthetic Bacterial Lipopeptide Pam3CSK4 Modulates Respiratory Syncytial Virus Infection Independent of TLR Activation. <i>PLoS Pathogens</i> , 2010, 6, e1001049.	2.1	54
82	Wild-type measles virus infection of primary epithelial cells occurs via the basolateral surface without syncytium formation or release of infectious virus. <i>Journal of General Virology</i> , 2010, 91, 971-979.	1.3	48
83	Depletion of measles virus glycoprotein-specific antibodies from human sera reveals genotype-specific neutralizing antibodies. <i>Journal of General Virology</i> , 2009, 90, 2982-2989.	1.3	28
84	Measles Studies in the Macaque Model. <i>Current Topics in Microbiology and Immunology</i> , 2009, 330, 55-72.	0.7	33
85	Measles vaccination: new strategies and formulations. <i>Expert Review of Vaccines</i> , 2008, 7, 1215-1223.	2.0	23
86	Immunogenicity and efficacy of two candidate human metapneumovirus vaccines in cynomolgus macaques. <i>Vaccine</i> , 2008, 26, 4224-4230.	1.7	45
87	Air travel as a risk factor for introduction of measles in a highly vaccinated population. <i>Vaccine</i> , 2008, 26, 5775-5777.	1.7	16
88	Impaired cellular immune response in harbour seals (<i>Phoca vitulina</i>) feeding on environmentally contaminated herring. <i>Clinical and Experimental Immunology</i> , 2008, 101, 480-486.	1.1	85
89	The Pathogenesis of Measles Revisited. <i>Pediatric Infectious Disease Journal</i> , 2008, 27, S84-S88.	1.1	20
90	Introduction. <i>Pediatric Infectious Disease Journal</i> , 2008, 27, S53.	1.1	1

#	ARTICLE	IF	CITATIONS
91	DC-SIGN and CD150 Have Distinct Roles in Transmission of Measles Virus from Dendritic Cells to T-Lymphocytes. <i>PLoS Pathogens</i> , 2008, 4, e1000049.	2.1	82
92	Predominant Infection of CD150+ Lymphocytes and Dendritic Cells during Measles Virus Infection of Macaques. <i>PLoS Pathogens</i> , 2007, 3, e178.	2.1	226
93	Infection of cynomolgus macaques (<i>Macaca fascicularis</i>) and rhesus macaques (<i>Macaca mulatta</i>) with different wild-type measles viruses. <i>Journal of General Virology</i> , 2007, 88, 2028-2034.	1.3	59
94	Experimental infection of macaques with human metapneumovirus induces transient protective immunity. <i>Journal of General Virology</i> , 2007, 88, 1251-1259.	1.3	47
95	Measles vaccination of macaques by dry powder inhalation. <i>Vaccine</i> , 2007, 25, 1183-1190.	1.7	55
96	Immunization of macaques with formalin-inactivated human metapneumovirus induces hypersensitivity to hMPV infection. <i>Vaccine</i> , 2007, 25, 8518-8528.	1.7	51
97	T Cell Responses to Respiratory Syncytial Virus Fusion and Attachment Proteins in Human Peripheral Blood Mononuclear Cells. <i>Viral Immunology</i> , 2006, 19, 669-678.	0.6	8
98	Measles vaccination effectiveness among children under 5 years of age in Kampala, Uganda. <i>Vaccine</i> , 2006, 24, 4111-4115.	1.7	22
99	Aerosol measles vaccination in macaques: Preclinical studies of immune responses and safety. <i>Vaccine</i> , 2006, 24, 6424-6436.	1.7	34
100	Measles virus-specific antibody levels in Sudanese infants: a prospective study using filter-paper blood samples. <i>Epidemiology and Infection</i> , 2006, 134, 79-85.	1.0	11
101	Relative Contributions of Measles Virus Hemagglutinin- and Fusion Protein-Specific Serum Antibodies to Virus Neutralization. <i>Journal of Virology</i> , 2005, 79, 11547-11551.	1.5	84
102	Development of a semi-quantitative real-time RT-PCR for the detection of measles virus. <i>Journal of Clinical Virology</i> , 2005, 32, 313-317.	1.6	33
103	Antigenic and Genetic Variability of Human Metapneumoviruses. <i>Emerging Infectious Diseases</i> , 2004, 10, 658-666.	2.0	329
104	Identification of a Common HLA-DP4-Restricted T-Cell Epitope in the Conserved Region of the Respiratory Syncytial Virus G Protein. <i>Journal of Virology</i> , 2004, 78, 1775-1781.	1.5	38
105	Measles virus protein-specific IgM, IgA, and IgG subclass responses during the acute and convalescent phase of infection. <i>Journal of Medical Virology</i> , 2004, 72, 290-298.	2.5	36
106	Surveillance of measles in the Sudan using filter paper blood samples. <i>Journal of Medical Virology</i> , 2004, 73, 624-630.	2.5	27
107	Administration of an insulin powder to the lungs of cynomolgus monkeys using a Penn Century insufflator. <i>International Journal of Pharmaceutics</i> , 2004, 269, 523-527.	2.6	20
108	Evaluation of BBG2Na in infant macaques: specific immune responses after vaccination and RSV challenge. <i>Vaccine</i> , 2004, 22, 915-922.	1.7	45

#	ARTICLE	IF	CITATIONS
109	Vaccination of infant macaques with a recombinant modified vaccinia virus Ankara expressing the respiratory syncytial virus F and G genes does not predispose for immunopathology. <i>Vaccine</i> , 2004, 22, 923-926.	1.7	32
110	An adenoviral type 5 vector carrying a type 35 fiber as a vaccine vehicle: DC targeting, cross neutralization, and immunogenicity. <i>Vaccine</i> , 2004, 22, 3035-3044.	1.7	69
111	Experimental vaccines against measles in a world of changing epidemiology. <i>International Journal for Parasitology</i> , 2003, 33, 525-545.	1.3	32
112	Moderate local and systemic respiratory syncytial virus-specific T-cell responses upon mild or subclinical RSV infection. <i>Journal of Medical Virology</i> , 2003, 70, 309-318.	2.5	25
113	Vaccination against measles: a neverending story. <i>Expert Review of Vaccines</i> , 2002, 1, 151-159.	2.0	27
114	The effects of chemical contaminants on immune function in harbour seals. <i>New Perspectives</i> , 2002, , .	0.2	0
115	Priming of measles virus-specific humoral- and cellular-immune responses in macaques by DNA vaccination. <i>Vaccine</i> , 2002, 20, 2022-2026.	1.7	22
116	Enteric administration of a live attenuated measles vaccine does not induce protective immunity in a macaque model. <i>Vaccine</i> , 2002, 20, 2906-2912.	1.7	7
117	Longevity of neutralizing antibody levels in macaques vaccinated with Quil A-adjuvanted measles vaccine candidates. <i>Vaccine</i> , 2002, 21, 155-157.	1.7	14
118	Immunization of Macaques with Formalin-Inactivated Respiratory Syncytial Virus (RSV) Induces Interleukin-13-Associated Hypersensitivity to Subsequent RSV Infection. <i>Journal of Virology</i> , 2002, 76, 11561-11569.	1.5	113
119	Retrospective Identification of Three Undiagnosed Cases of Measles Encephalitis. <i>European Journal of Clinical Microbiology and Infectious Diseases</i> , 2002, 21, 900-901.	1.3	1
120	Measles in suburban Khartoum: an epidemiological and clinical study. <i>Tropical Medicine and International Health</i> , 2002, 7, 442-449.	1.0	20
121	Genetic characterization of wild-type measles viruses circulating in suburban Khartoum, 1997â€“2000. <i>Journal of General Virology</i> , 2002, 83, 1437-1443.	1.3	47
122	Prevention of measles in Sudan: a prospective study on vaccination, diagnosis and epidemiology. <i>Vaccine</i> , 2001, 19, 2254-2257.	1.7	7
123	Safety of modified vaccinia virus Ankara (MVA) in immune-suppressed macaques. <i>Vaccine</i> , 2001, 19, 3700-3709.	1.7	161
124	Genetic analysis of Asian measles virus strains â€“ new endemic genotype in Nepal. <i>Virus Research</i> , 2001, 76, 71-78.	1.1	37
125	Combination of Reverse Transcriptase PCR Analysis and Immunoglobulin M Detection on Filter Paper Blood Samples Allows Diagnostic and Epidemiological Studies of Measles. <i>Journal of Clinical Microbiology</i> , 2001, 39, 270-273.	1.8	64
126	Safety and Immunogenicity of a Novel Recombinant Subunit Respiratory Syncytial Virus Vaccine (BBG2Na) in Healthy Young Adults. <i>Journal of Infectious Diseases</i> , 2001, 184, 1456-1460.	1.9	111

#	ARTICLE	IF	CITATIONS
127	Type I-like immune response is found in children with respiratory syncytial virus infection regardless of clinical severity. <i>Journal of Medical Virology</i> , 2000, 62, 267-277.	2.5	103
128	Evaluation of different measles IgG assays based on recombinant proteins using a panel of low-titre sera. <i>Journal of Virological Methods</i> , 2000, 84, 191-200.	1.0	15
129	Protective Immunity in Macaques Vaccinated with a Modified Vaccinia Virus Ankara-Based Measles Virus Vaccine in the Presence of Passively Acquired Antibodies. <i>Journal of Virology</i> , 2000, 74, 4236-4243.	1.5	106
130	HLA Class I-Restricted Cytotoxic T-Cell Epitopes of the Respiratory Syncytial Virus Fusion Protein. <i>Journal of Virology</i> , 2000, 74, 10240-10244.	1.5	41
131	Measles in a Dutch hospital introduced by an immunocompromised infant from Indonesia infected with a new virus genotype. <i>Lancet, The</i> , 2000, 355, 201-202.	6.3	64
132	Serological and Virological Characterization of Clinically Diagnosed Cases of Measles in Suburban Khartoum. <i>Journal of Clinical Microbiology</i> , 2000, 38, 987-991.	1.8	36
133	Measles virus fusion protein- and hemagglutinin-transfected cell lines are a sensitive tool for the detection of specific antibodies by a FACS-measured immunofluorescence assay. <i>Journal of Virological Methods</i> , 1998, 71, 35-44.	1.0	35
134	Major immunogenic proteins of phocid herpesviruses and their relationships to proteins of canine and feline herpesviruses. <i>Veterinary Quarterly</i> , 1998, 20, 50-55.	3.0	12
135	Age-related disease in recurrent outbreaks of phocid herpesvirus type 1 infections in a seal rehabilitation centre: evaluation of diagnostic methods. <i>Veterinary Record</i> , 1997, 140, 500-503.	0.2	20
