| #  | Article                                                                                                                                                                                                                  | lF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 1  | Machine learning in crop yield modelling: A powerful tool, but no surrogate for science.<br>Agricultural and Forest Meteorology, 2022, 312, 108698.                                                                      | 1.9 | 43        |
| 2  | The curse of the past – What can tile drain effluent tell us about arable field management?.<br>Agriculture, Ecosystems and Environment, 2022, 326, 107787.                                                              | 2.5 | 6         |
| 3  | Landâ€use type temporarily affects active pond community structure but not gene expression patterns.<br>Molecular Ecology, 2022, 31, 1716-1734.                                                                          | 2.0 | 5         |
| 4  | From microbes to mammals: Pond biodiversity homogenization across different landâ€use types in an<br>agricultural landscape. Ecological Monographs, 2022, 92, .                                                          | 2.4 | 6         |
| 5  | Co-Cultivation of Fusarium, Alternaria, and Pseudomonas on Wheat-Ears Affects Microbial Growth and Mycotoxin Production. Microorganisms, 2021, 9, 443.                                                                   | 1.6 | 10        |
| 6  | Key drivers structuring rotifer communities in ponds: insights into an agricultural landscape.<br>Journal of Plankton Research, 2021, 43, 396-412.                                                                       | 0.8 | 13        |
| 7  | Inconsistent hydrological trends do not necessarily imply spatially heterogeneous drivers. Journal of<br>Hydrology, 2021, 596, 126096.                                                                                   | 2.3 | 7         |
| 8  | How much information do we gain from multiple-year sampling in natural pond research?.<br>Limnologica, 2020, 80, 125728.                                                                                                 | 0.7 | 3         |
| 9  | Crop growth and soil water fluxes at erosionâ€affected arable sites: Using weighing lysimeter data for<br>model intercomparison. Vadose Zone Journal, 2020, 19, e20058.                                                  | 1.3 | 17        |
| 10 | Droughts projection over the Niger and Volta River basins of West Africa at specific global warming<br>levels. International Journal of Climatology, 2020, 40, 5688-5699.                                                | 1.5 | 10        |
| 11 | No perfect storm for crop yield failure in Germany. Environmental Research Letters, 2020, 15, 104012.                                                                                                                    | 2.2 | 53        |
| 12 | Characterizing hydrological processes within kettle holes using stable water isotopes in the<br>Uckermark of northern Brandenburg, Germany. Hydrological Processes, 2020, 34, 1868-1887.                                 | 1.1 | 10        |
| 13 | Efficient screening of groundwater head monitoring data for anthropogenic effects and measurement errors. Hydrology and Earth System Sciences, 2020, 24, 501-513.                                                        | 1.9 | 12        |
| 14 | Application of a decision support tool for industrial and agricultural water reuse solutions in international case studies. Journal of Water Reuse and Desalination, 2020, 10, 405-418.                                  | 1.2 | 1         |
| 15 | Mobilisation and transport of dissolved organic carbon and iron in peat catchments—Insights from<br>the Lehstenbach stream in Germany using generalised additive models. Hydrological Processes, 2019,<br>33, 3213-3225. | 1.1 | 5         |
| 16 | Microclimate and matter dynamics in transition zones of forest to arable land. Agricultural and Forest Meteorology, 2019, 268, 1-10.                                                                                     | 1.9 | 21        |
| 17 | Modeling Yields Response to Shading in the Field-to-Forest Transition Zones in Heterogeneous<br>Landscapes. Agriculture (Switzerland), 2019, 9, 6.                                                                       | 1.4 | 18        |
| 18 | Multivariate analysis to assess the impact of irrigation on groundwater quality. Environmental Earth<br>Sciences, 2019, 78, 1.                                                                                           | 1.3 | 8         |

| #  | Article                                                                                                                                                                                                            | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 19 | Disentangling limnological processes in the timeâ€frequency domain. Limnology and Oceanography, 2019, 64, 423-440.                                                                                                 | 1.6 | 8         |
| 20 | Improving a distributed hydrological model using evapotranspirationâ€related boundary conditions as additional constraints in a dataâ€scarce river basin. Hydrological Processes, 2018, 32, 759-775.               | 1.1 | 36        |
| 21 | Dry-wet cycles of kettle hole sediments leave a microbial and biogeochemical legacy. Science of the<br>Total Environment, 2018, 627, 985-996.                                                                      | 3.9 | 20        |
| 22 | Temporal and spatial scales of water temperature variability as an indicator for mixing in a polymictic lake. Inland Waters, 2018, 8, 82-95.                                                                       | 1.1 | 11        |
| 23 | A review on missing hydrological data processing. Environmental Earth Sciences, 2018, 77, 1.                                                                                                                       | 1.3 | 39        |
| 24 | Cross-disciplinary links in environmental systems science: Current state and claimed needs identified in a meta-review of process models. Science of the Total Environment, 2018, 622-623, 954-973.                | 3.9 | 12        |
| 25 | Biogeochemistry of natural ponds in agricultural landscape: Lessons learned from modeling a kettle<br>hole in Northeast Germany. Science of the Total Environment, 2018, 634, 1615-1630.                           | 3.9 | 15        |
| 26 | Natural ponds in an agricultural landscape: External drivers, internal processes, and the role of the terrestrial-aquatic interface. Limnologica, 2018, 68, 5-16.                                                  | 0.7 | 43        |
| 27 | Relationship between rice yield and climate variables in southwest Nigeria using multiple linear<br>regression and support vector machine analysis. International Journal of Biometeorology, 2018, 62,<br>459-469. | 1.3 | 40        |
| 28 | Impacts of climate variability and change on drought characteristics in the Niger River Basin, West<br>Africa. Stochastic Environmental Research and Risk Assessment, 2018, 32, 1017-1034.                         | 1.9 | 32        |
| 29 | Interdisciplinary Geoâ€ecological Research across Time Scales in the Northeast German Lowland<br>Observatory (TERENOâ€NE). Vadose Zone Journal, 2018, 17, 1-25.                                                    | 1.3 | 29        |
| 30 | Predominance of methanogens over methanotrophs in rewetted fens characterized by high methane emissions. Biogeosciences, 2018, 15, 6519-6536.                                                                      | 1.3 | 38        |
| 31 | Stream water quality affected by interacting hydrological and biogeochemical processes in a riparian wetland. Journal of Hydrology, 2018, 563, 260-272.                                                            | 2.3 | 9         |
| 32 | Detecting dominant changes in irregularly sampled multivariate water quality data sets. Hydrology and Earth System Sciences, 2018, 22, 4401-4424.                                                                  | 1.9 | 1         |
| 33 | Analysis of longâ€ŧerm dry and wet conditions over Nigeria. International Journal of Climatology, 2017, 37, 3577-3586.                                                                                             | 1.5 | 15        |
| 34 | Forensic hydrology: what function tells about structure in complex settings. Environmental Earth<br>Sciences, 2017, 76, 1.                                                                                         | 1.3 | 11        |
| 35 | Impacts of climate change on hydro-meteorological drought over the Volta Basin, West Africa. Global<br>and Planetary Change, 2017, 155, 121-132.                                                                   | 1.6 | 60        |
| 36 | Communicating landscape hydrology — the water cycle in a box. Hydrological Processes, 2017, 31,<br>750-752.                                                                                                        | 1.1 | 5         |

| #  | Article                                                                                                                                                                                    | IF  | CITATIONS |
|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 37 | Gradients of microclimate, carbon and nitrogen in transition zones of fragmented landscapes – a<br>review. Agricultural and Forest Meteorology, 2017, 232, 659-671.                        | 1.9 | 95        |
| 38 | Land-use and hydroperiod affect kettle hole sediment carbon and nitrogen biogeochemistry. Science of the Total Environment, 2017, 574, 46-56.                                              | 3.9 | 28        |
| 39 | Evaluation of Spatio-Temporal Patterns of Remotely Sensed Evapotranspiration to Infer Information about Hydrological Behaviour in a Data-Scarce Region. Water (Switzerland), 2017, 9, 333. | 1.2 | 17        |
| 40 | Hydraulic Performance of Horticultural Substrates—3. Impact of Substrate Composition and<br>Ingredients. Horticulturae, 2017, 3, 7.                                                        | 1.2 | 7         |
| 41 | Catchment Evapotranspiration and Runoff. Ecological Studies, 2017, , 355-375.                                                                                                              | 0.4 | 1         |
| 42 | A numerical modelling study of the hydroclimatology of the Niger River Basin, West Africa.<br>Hydrological Sciences Journal, 2016, 61, 94-106.                                             | 1.2 | 5         |
| 43 | Disentangling the Effects of Land Management and Soil Heterogeneity on Soil Moisture Dynamics.<br>Vadose Zone Journal, 2016, 15, 1-12.                                                     | 1.3 | 9         |
| 44 | Effects of Data and Model Simplification on the Results of a Wetland Water Resource Management<br>Model. Water (Switzerland), 2016, 8, 252.                                                | 1.2 | 1         |
| 45 | The importance of landscape diversity for carbon fluxes at the landscape level: smallâ€scale<br>heterogeneity matters. Wiley Interdisciplinary Reviews: Water, 2016, 3, 601-617.           | 2.8 | 32        |
| 46 | Carbon and nutrient cycling in kettle hole sediments depending on hydrological dynamics: a review.<br>Hydrobiologia, 2016, 775, 1-20.                                                      | 1.0 | 50        |
| 47 | Groundwater head controls nitrate export from an agricultural lowland catchment. Advances in<br>Water Resources, 2016, 96, 95-107.                                                         | 1.7 | 42        |
| 48 | Sediment cores from kettle holes in NE Germany reveal recent impacts of agriculture. Environmental<br>Science and Pollution Research, 2016, 23, 7409-7424.                                 | 2.7 | 31        |
| 49 | Assessing resilience in long-term ecological data sets. Ecological Indicators, 2016, 65, 10-43.                                                                                            | 2.6 | 70        |
| 50 | Monitoring the phase space of ecosystems: Concept and examples from the Quillow catchment,<br>Uckermark. Ecological Indicators, 2016, 65, 55-65.                                           | 2.6 | 13        |
| 51 | Transit times of water under steady stormflow conditions in the Gårdsjön G1 catchment.<br>Hydrological Processes, 2015, 29, 4657-4665.                                                     | 1.1 | 2         |
| 52 | Temporal variability of the optimal monitoring setup assessed using information theory. Water<br>Resources Research, 2015, 51, 7723-7743.                                                  | 1.7 | 27        |
| 53 | Long term shift of low flows predictors in small lowland catchments of Northeast Germany. Journal of Hydrology, 2015, 521, 508-519.                                                        | 2.3 | 6         |
| 54 | Does textural heterogeneity matter? Quantifying transformation of hydrological signals in soils.<br>Journal of Hydrology, 2015, 523, 725-738.                                              | 2.3 | 16        |

| #  | Article                                                                                                                                                                                                     | IF  | CITATIONS |
|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
| 55 | Multivariate Analysis of Groundwater-Quality Time-Series Using Self-organizing Maps and Sammon's<br>Mapping. Water Resources Management, 2015, 29, 3957-3970.                                               | 1.9 | 4         |
| 56 | A novel method to evaluate the effect of a stream restoration on the spatial pattern of hydraulic connection of stream and groundwater. Journal of Hydrology, 2015, 527, 394-401.                           | 2.3 | 16        |
| 57 | Multi-decadal lake-level dynamics in north-eastern Germany as derived by a combination of gauging, proxy-data and modelling. Journal of Hydrology, 2015, 529, 584-599.                                      | 2.3 | 12        |
| 58 | The effects of climate and changing land use on the discharge regime of a small catchment in<br>Tanzania. Regional Environmental Change, 2015, 15, 1269-1280.                                               | 1.4 | 38        |
