#	ARTICLE	IF	CITATIONS
1	Frequency-tunable wide-angle polarization selection with a graphene-based anisotropic epsilon-near-zero metamaterial. Journal of Optics (United Kingdom), 2022, 24, 024004.	2.2	4
2	Terahertz membrane sensing based on terahertz composite slabs with enhanced fields. Applied Physics A: Materials Science and Processing, 2022, 128, .	2.3	1
3	Tuning transmission properties of 3D printed metal rod arrays by breaking the structural symmetry. Optics Express, 2021, 29, 538.	3.4	6
4	Enhanced terahertz shielding by adding rare Ag nanoparticles to $\text{Ti}_3\text{C}_2\text{Tx}$ MXene fiber membranes. Nanotechnology, 2021, 32, 415204.	2.6	13
5	Terahertz high-Q quasi-bound states in the continuum in laser-fabricated metallic double-slit arrays. Optics Express, 2021, 29, 24779.	3.4	27
6	Profile control of femtosecond laser-fabricated moth-eye structures on Si substrate. Optics and Lasers in Engineering, 2021, 142, 106584.	3.8	24
7	Dual quasibound states in the continuum in compound grating waveguide structures for large positive and negative Goos-Hänchen shifts with perfect reflection. Physical Review A, 2021, 104, .	2.5	51
8	Quasi-bound states in the continuum in metal complementary periodic cross-shaped resonators at terahertz frequencies. Optics Letters, 2021, 46, 4370.	3.3	21
9	Complete redshift photonic bandgap and dual-wavelength polarization selection in periodic multilayer structure containing hyperbolic metamaterial. Optics Communications, 2021, 495, 127117.	2.1	9
10	Achieving High Transmission and Q Bragg Filter via Balancing Dissipation and Radiation Loss. IEEE Photonics Journal, 2021, 13, 1-5.	2.0	1
11	Investigation of quasi-bound states in the continuum in terahertz metal complementary periodic cross-shaped resonators. , 2021, , .		0
12	Bandwidth-tunable near-infrared perfect absorption of graphene in a compound grating waveguide structure supporting quasi-bound states in the continuum. Optics Express, 2021, 29, 41975.	3.4	48
13	Broadband omnidirectional near-infrared reflector based on an angle-insensitive photonic band gap. Applied Optics, 2020, 59, 9621.	1.8	21
14	Terahertz composite plasmonic slabs based on double-layer metallic gratings. Optics Express, 2020, 28, 18212.	3.4	7
15	Sharp resonances in terahertz free-standing three-dimensional metallic woven meshes. Optics Express, 2020, 28, 30174.	3.4	12
16	Investigation of THz tapered parallel plate waveguide integrated with a metal slit array. , 2019, , .		0
17	Geometry-dependent modal field properties of metal-rod-array-based terahertz waveguides. OSA Continuum, 2019, 2, 655.	1.8	5
18	Characterization of Terahertz Wave Propagation Dependent on Metal-Rod-Array Structures. , 2018, , .		0

#	ARTICLE	IF	CITATIONS
19	Investigation of spectral properties and lateral confinement of THz waves on a metal-rod-array-based photonic crystal waveguide. Optics Express, 2018, 26, 15570.	3.4	8
20	Dispersionless optical activity based on novel windmill-shaped chiral metamaterial. Modern Physics Letters B, 2016, 30, 1650033.	1.9	5
21	A polarization insensitive and broadband metamaterial absorber based on three-dimensional structure. Optics Communications, 2016, 372, 64-70.	2.1	30
22	Cross polarization conversion based on a new chiral spiral slot structure in THz region. Optical and Quantum Electronics, 2016, 48, 1.	3.3	44
23	Dual-band cross polarization converter in bi-layered complementary chiral metamaterial. Journal of Modern Optics, 2016, 63, 937-940.	1.3	25
24	Dual-band asymmetric transmission of chiral metamaterial based on complementary U-shaped structure. Applied Physics A: Materials Science and Processing, 2015, 118, 787-791.	2.3	28
25	Asymmetric transmission of chiral metamaterial slab with double L resonators. Optics Communications, 2015, 338, 359-365.	2.1	40
