citing authors

| #  | ARTICLE   | IF   | CITATIONS |
|----|---|------|-----------|
| 1  | Picante: R tools for integrating phylogenies and ecology. <i>Bioinformatics</i> , 2010, 26, 1463-1464.  | 4.1  | 4,517     |
| 2  | TRY – a global database of plant traits. <i>Global Change Biology</i> , 2011, 17, 2905-2935.  | 9.5  | 2,002     |
| 3  | Plant species traits are the predominant control on litter decomposition rates within biomes worldwide. <i>Ecology Letters</i> , 2008, 11, 1065-1071.   | 6.4  | 1,913     |
| 4  | Three keys to the radiation of angiosperms into freezing environments. <i>Nature</i> , 2014, 506, 89-92.  | 27.8 | 1,284     |
| 5  | TRY plant trait database – enhanced coverage and open access. <i>Global Change Biology</i> , 2020, 26, 119-188.   | 9.5  | 1,038     |
| 6  | A TRAIT-BASED TEST FOR HABITAT FILTERING: CONVEX HULL VOLUME. <i>Ecology</i> , 2006, 87, 1465-1471.   | 3.2  | 963       |
| 7  | Community assembly and shifts in plant trait distributions across an environmental gradient in coastal California. <i>Ecological Monographs</i> , 2009, 79, 109-126.                                  | 5.4  | 940       |
| 8  | The effects of phenotypic plasticity and local adaptation on forecasts of species range shifts under climate change. <i>Ecology Letters</i> , 2014, 17, 1351-1364.                                    | 6.4  | 802       |
| 9  | A trait-based approach to community assembly: partitioning of species trait values into within- and among-community components. <i>Ecology Letters</i> , 2007, 10, 135-145.                           | 6.4  | 638       |
| 10 | Trait Evolution, Community Assembly, and the Phylogenetic Structure of Ecological Communities. <i>American Naturalist</i> , 2007, 170, 271-283.   | 2.1  | 625       |
| 11 | The geography of climate change: implications for conservation biogeography. <i>Diversity and Distributions</i> , 2010, 16, 476-487.  | 4.1  | 490       |
| 12 | Plant functional trait change across a warming tundra biome. <i>Nature</i> , 2018, 562, 57-62.  | 27.8 | 451       |
| 13 | Global meta-analysis of wood decomposition rates: a role for trait variation among tree species?. <i>Ecology Letters</i> , 2009, 12, 45-56.   | 6.4  | 394       |
| 14 | Wood density and vessel traits as distinct correlates of ecological strategy in 51 California coast range angiosperms. <i>New Phytologist</i> , 2006, 170, 807-818.                                   | 7.3  | 374       |
| 15 | Linking litter decomposition of above- and below-ground organs to plant-soil feedbacks worldwide. <i>Journal of Ecology</i> , 2013, 101, 943-952.   | 4.0  | 362       |
| 16 | Why are non-photosynthetic tissues generally <sup>13</sup> C enriched compared with leaves in C3 plants? Review and synthesis of current hypotheses. <i>Functional Plant Biology</i> , 2009, 36, 199. | 2.1  | 348       |
| 17 | A global method for calculating plant <sc>CSR</sc> ecological strategies applied across biomes worldwide. <i>Functional Ecology</i> , 2017, 31, 444-457.  | 3.6  | 330       |
| 18 | Which is a better predictor of plant traits: temperature or precipitation?. <i>Journal of Vegetation Science</i> , 2014, 25, 1167-1180.   | 2.2  | 323       |

| #  | ARTICLE   | IF   | CITATIONS |
|----|---|------|-----------|
| 19 | Plant traits and wood fates across the globe: rotted, burned, or consumed?. <i>Global Change Biology</i> , 2009, 15, 2431-2449.   | 9.5  | 318       |
| 20 | A single evolutionary innovation drives the deep evolution of symbiotic N <sub>2</sub> -fixation in angiosperms. <i>Nature Communications</i> , 2014, 5, 4087.  | 12.8 | 260       |
| 21 | Global effects of soil and climate on leaf photosynthetic traits and rates. <i>Global Ecology and Biogeography</i> , 2015, 24, 706-717.   | 5.8  | 254       |
| 22 | Towards a universal model for carbon dioxide uptake by plants. <i>Nature Plants</i> , 2017, 3, 734-741.   | 9.3  | 237       |
| 23 | Regional and local patterns in plant species richness with respect to resource availability. <i>Oikos</i> , 2003, 100, 417-428.   | 2.7  | 176       |
| 24 | Taller and larger: shifts in Arctic tundra leaf traits after 16 years of experimental warming. <i>Global Change Biology</i> , 2011, 17, 1013-1021.  | 9.5  | 171       |
| 25 | Fungal functional ecology: bringing a trait-based approach to plant-associated fungi. <i>Biological Reviews</i> , 2020, 95, 409-433.  | 10.4 | 171       |
| 26 | Global patterns of plant root colonization intensity by mycorrhizal fungi explained by climate and soil chemistry. <i>Global Ecology and Biogeography</i> , 2015, 24, 371-382.  | 5.8  | 163       |
| 27 | Putting plant resistance traits on the map: a test of the idea that plants are better defended at lower latitudes. <i>New Phytologist</i> , 2011, 191, 777-788.   | 7.3  | 155       |
| 28 | Model Adequacy and the Macroevolution of Angiosperm Functional Traits. <i>American Naturalist</i> , 2015, 186, E33-E50.   | 2.1  | 154       |
| 29 | Global relationship of wood and leaf litter decomposability: the role of functional traits within and across plant organs. <i>Global Ecology and Biogeography</i> , 2014, 23, 1046-1057.  | 5.8  | 136       |
| 30 | Generalists are the most urban-tolerant of birds: a phylogenetically controlled analysis of ecological and life history traits using a novel continuous measure of bird responses to urbanization. <i>Oikos</i> , 2019, 128, 845-858. | 2.7  | 132       |
| 31 | A link between plant traits and abundance: evidence from coastal California woody plants. <i>Journal of Ecology</i> , 2010, 98, 814-821.  | 4.0  | 129       |
| 32 | Correlations between physical and chemical defences in plants: tradeoffs, syndromes, or just many different ways to skin a herbivorous cat?. <i>New Phytologist</i> , 2013, 198, 252-263.   | 7.3  | 124       |
| 33 | A rediscovered treasure: mycorrhizal intensity database for 3000 vascular plant species across the former Soviet Union. <i>Ecology</i> , 2012, 93, 689-690.   | 3.2  | 113       |
| 34 | Functional distinctiveness of major plant lineages. <i>Journal of Ecology</i> , 2014, 102, 345-356.   | 4.0  | 108       |
| 35 | Improving big citizen science data: Moving beyond haphazard sampling. <i>PLoS Biology</i> , 2019, 17, e3000357.   | 5.6  | 108       |
| 36 | Global to community scale differences in the prevalence of convergent over divergent leaf trait distributions in plant assemblages. <i>Global Ecology and Biogeography</i> , 2011, 20, 755-765.                                       | 5.8  | 106       |

| #  | ARTICLE  | IF  | CITATIONS |
|----|--|-----|-----------|
| 37 | Plant-driven variation in decomposition rates improves projections of global litter stock distribution. <i>Biogeosciences</i> , 2012, 9, 565-576.  | 3.3 | 105       |
| 38 | Phylogenetic tests of community assembly across regional to continental scales in tropical and subtropical rain forests. <i>Global Ecology and Biogeography</i> , 2011, 20, 707-716.                         | 5.8 | 95        |
| 39 | Leaf traits within communities: Context may affect the mapping of traits to function. <i>Ecology</i> , 2013, 94, 1893-1897.  | 3.2 | 94        |
| 40 | Occurrence of arbuscular mycorrhizal fungi in a phosphorus-poor wetland and mycorrhizal response to phosphorus fertilization. <i>American Journal of Botany</i> , 2001, 88, 1824-1829.                       | 1.7 | 93        |
| 41 | Burn or rot: leaf traits explain why flammability and decomposability are decoupled across species. <i>Functional Ecology</i> , 2015, 29, 1486-1497.   | 3.6 | 91        |
| 42 | Symbiont switching and alternative resource acquisition strategies drive mutualism breakdown. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2018, 115, 5229-5234. | 7.1 | 90        |
| 43 | How much of the world is woody?. <i>Journal of Ecology</i> , 2014, 102, 1266-1272.   | 4.0 | 88        |
| 44 | Mutualism Persistence and Abandonment during the Evolution of the Mycorrhizal Symbiosis. <i>American Naturalist</i> , 2016, 188, E113-E125.  | 2.1 | 87        |
| 45 | Climate and soils together regulate photosynthetic carbon isotope discrimination within $C_3$ plants worldwide. <i>Global Ecology and Biogeography</i> , 2018, 27, 1056-1067.                                | 5.8 | 85        |
| 46 | What we (don't) know about global plant diversity. <i>Ecography</i> , 2019, 42, 1819-1831.   | 4.5 | 79        |
| 47 | AusTraits, a curated plant trait database for the Australian flora. <i>Scientific Data</i> , 2021, 8, 254.   | 5.3 | 73        |
| 48 | Evolutionary signals of symbiotic persistence in the legume-rhizobia mutualism. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2015, 112, 10262-10269.             | 7.1 | 71        |
| 49 | Phylogenetic comparative methods. <i>Current Biology</i> , 2017, 27, R333-R336.  | 3.9 | 66        |
| 50 | Global abundance estimates for 9,700 bird species. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2021, 118, .   | 7.1 | 66        |
| 51 | Plants show more flesh in the tropics: variation in fruit type along latitudinal and climatic gradients. <i>Ecography</i> , 2017, 40, 531-538.   | 4.5 | 65        |
| 52 | Flammability across the gymnosperm phylogeny: the importance of litter particle size. <i>New Phytologist</i> , 2015, 206, 672-681.   | 7.3 | 64        |
| 53 | Sexual dimorphism in trait variability and its eco-evolutionary and statistical implications. <i>ELife</i> , 2020, 9, .  | 6.0 | 64        |
| 54 | Functional biogeography of angiosperms: life at the extremes. <i>New Phytologist</i> , 2018, 218, 1697-1709.   | 7.3 | 61        |

| #  | ARTICLE  | IF  | CITATIONS |
|----|--|-----|-----------|
| 55 | Trees, branches and (square) roots: why evolutionary relatedness is not linearly related to functional distance. <i>Methods in Ecology and Evolution</i> , 2015, 6, 439-444.             | 5.2 | 56        |
| 56 | Decomposition trajectories of diverse litter types: a model selection analysis. <i>Methods in Ecology and Evolution</i> , 2014, 5, 173-182.  | 5.2 | 51        |
| 57 | Are litter decomposition and fire linked through plant species traits?. <i>New Phytologist</i> , 2017, 216, 653-669.   | 7.3 | 50        |
| 58 | Traditional plant functional groups explain variation in economic but not size-related traits across the tundra biome. <i>Global Ecology and Biogeography</i> , 2019, 28, 78-95.         | 5.8 | 49        |
| 59 | Optimizing future biodiversity sampling by citizen scientists. <i>Proceedings of the Royal Society B: Biological Sciences</i> , 2019, 286, 20191487.                                     | 2.6 | 45        |
| 60 | Bridging reproductive and microbial ecology: a case study in arbuscular mycorrhizal fungi. <i>ISME Journal</i> , 2019, 13, 873-884.  | 9.8 | 43        |
| 61 | A simple approach for maximizing the overlap of phylogenetic and comparative data. <i>Methods in Ecology and Evolution</i> , 2016, 7, 751-758.   | 5.2 | 41        |
| 62 | Australian Tropical and Subtropical Rain Forest Community Assembly: Phylogeny, Functional Biogeography, and Environmental Gradients. <i>Biotropica</i> , 2012, 44, 668-679.              | 1.6 | 40        |
| 63 | Species composition and fire: non-additive mixture effects on ground fuel flammability. <i>Frontiers in Plant Science</i> , 2012, 3, 63.   | 3.6 | 39        |
| 64 | Termites amplify the effects of wood traits on decomposition rates among multiple bamboo and dicot woody species. <i>Journal of Ecology</i> , 2015, 103, 1214-1223.                      | 4.0 | 38        |
| 65 | Plant functional traits in Australian subtropical rain forest: partitioning within a community from cross-landscape variation. <i>Journal of Ecology</i> , 2010, 98, 517-525.            | 4.0 | 37        |
| 66 | A Geographic Mosaic of Climate Change Impacts on Terrestrial Vegetation: Which Areas Are Most at Risk?. <i>PLoS ONE</i> , 2015, 10, e0130629.  | 2.5 | 37        |
| 67 | Rapidly mapping fire effects on biodiversity at a large-scale using citizen science. <i>Science of the Total Environment</i> , 2021, 755, 142348.  | 8.0 | 36        |
| 68 | Abundance, rarity and invasion debt among exotic species in a patchy ecosystem. <i>Biological Invasions</i> , 2013, 15, 707-716.   | 2.4 | 35        |
| 69 | Topographic, latitudinal and climatic distribution of <i>Pinus coulteri</i> : geographic range limits are not at the edge of the climate envelope. <i>Ecography</i> , 2015, 38, 590-601. | 4.5 | 35        |
| 70 | Contest competition and men's facial hair: beards may not provide advantages in combat. <i>Evolution and Human Behavior</i> , 2018, 39, 147-153.   | 2.2 | 35        |
| 71 | Winners always win: growth of a wide range of plant species from low to future high $\text{CO}_2$ . <i>Ecology and Evolution</i> , 2015, 5, 4949-4961.                                   | 1.9 | 34        |
| 72 | A global database for metacommunity ecology, integrating species, traits, environment and space. <i>Scientific Data</i> , 2020, 7, 6.  | 5.3 | 28        |

| #  | ARTICLE   | IF  | CITATIONS |
|----|---|-----|-----------|
| 73 | Decomposition of 51 semidesert species from wide-ranging phylogeny is faster in standing and sand-buried than in surface leaf litters: implications for carbon and nutrient dynamics. <i>Plant and Soil</i> , 2015, 396, 175-187. | 3.7 | 27        |
| 74 | Modelling the distribution of fish around an artificial reef. <i>Marine and Freshwater Research</i> , 2017, 68, 1955.   | 1.3 | 25        |
| 75 | Natural and Regenerated Saltmarshes Exhibit Similar Soil and Belowground Organic Carbon Stocks, Root Production and Soil Respiration. <i>Ecosystems</i> , 2019, 22, 1803-1822.  | 3.4 | 25        |
| 76 | Species mixture effects on flammability across plant phylogeny: the importance of litter particle size and the special role for non- <i>Pinus</i> Pinaceae. <i>Ecology and Evolution</i> , 2016, 6, 8223-8234.                    | 1.9 | 24        |
| 77 | When and where soil is important to modify the carbon and water economy of leaves. <i>New Phytologist</i> , 2020, 228, 121-135.   | 7.3 | 24        |
| 78 | Is color data from citizen science photographs reliable for biodiversity research?. <i>Ecology and Evolution</i> , 2021, 11, 4071-4083.   | 1.9 | 24        |
| 79 | Meta-analysis reveals profound responses of plant traits to glacial $\text{CO}_2$ levels. <i>Ecology and Evolution</i> , 2013, 3, 4525-4535.  | 1.9 | 22        |
| 80 | The Tree of Life in ecosystems: evolution of plant effects on carbon and nutrient cycling. <i>Journal of Ecology</i> , 2014, 102, 269-274.  | 4.0 | 22        |
| 81 | Using citizen science data to define and track restoration targets in urban areas. <i>Journal of Applied Ecology</i> , 2019, 56, 1998.  | 4.0 | 22        |
| 82 | Three Frontiers for the Future of Biodiversity Research Using Citizen Science Data. <i>BioScience</i> , 0, , .  | 4.9 | 22        |
| 83 | Functional traits drive the contribution of solar radiation to leaf litter decomposition among multiple arid-zone species. <i>Scientific Reports</i> , 2015, 5, 13217.  | 3.3 | 21        |
| 84 | A unique web resource for physiology, ecology and the environmental sciences: PrometheusWiki. <i>Functional Plant Biology</i> , 2010, 37, 687.  | 2.1 | 20        |
| 85 | Intraspecific leaf trait variability along a boreal-to-tropical community diversity gradient. <i>PLoS ONE</i> , 2017, 12, e0172495.   | 2.5 | 20        |
| 86 | A continental measure of urbanness predicts avian response to local urbanization. <i>Ecography</i> , 2020, 43, 528-538.   | 4.5 | 19        |
| 87 | Widespread short-term persistence of frog species after the 2019-2020 bushfires in eastern Australia revealed by citizen science. <i>Conservation Science and Practice</i> , 2020, 2, e287.                                       | 2.0 | 19        |
| 88 | Interactions between Fine Wood Decomposition and Flammability. <i>Forests</i> , 2014, 5, 827-846.   | 2.1 | 18        |
| 89 | Weak phylogenetic signal in physiological traits of methane-oxidizing bacteria. <i>Journal of Evolutionary Biology</i> , 2014, 27, 1240-1247.   | 1.7 | 18        |
| 90 | Good neighbors aplenty: fungal endophytes rarely exhibit competitive exclusion patterns across a span of woody habitats. <i>Ecology</i> , 2019, 100, e02790.  | 3.2 | 18        |

| #   | ARTICLE   | IF  | CITATIONS |
|-----|---|-----|-----------|
| 91  | Conservation birding: A quantitative conceptual framework for prioritizing citizen science observations. <i>Biological Conservation</i> , 2021, 253, 108912.  | 4.1 | 18        |
| 92  | Understanding the ecosystem implications of the angiosperm rise to dominance: leaf litter decomposability among magnoliids and other basal angiosperms. <i>Journal of Ecology</i> , 2014, 102, 337-344.         | 4.0 | 17        |
| 93  | A global growth form database for 143,616 vascular plant species. <i>Ecology</i> , 2019, 100, e02614.   | 3.2 | 17        |
| 94  | How to build a biodiverse city: environmental determinants of bird diversity within and among 1581 cities. <i>Biodiversity and Conservation</i> , 2021, 30, 217-234.  | 2.6 | 16        |
| 95  | Lichens buffer tundra microclimate more than the expanding shrub <i>Betula nana</i> . <i>Annals of Botany</i> , 2021, 128, 407-418.   | 2.9 | 16        |
| 96  | Experimental evidence that the O rNSTEIN&U hlenbeck model best describes the evolution of leaf litter decomposability. <i>Ecology and Evolution</i> , 2014, 4, 3339-3349.                                       | 1.9 | 15        |
| 97  | Hungry and thirsty: Effects of CO <sub>2</sub> and limited water availability on plant performance. <i>Flora: Morphology, Distribution, Functional Ecology of Plants</i> , 2019, 254, 188-193.                  | 1.2 | 13        |
| 98  | Urban tolerance of birds changes throughout the full annual cycle. <i>Journal of Biogeography</i> , 2021, 48, 1503-1517.  | 3.0 | 13        |
| 99  | Effects of Growth Form and Functional Traits on Response of Woody Plants to Clearing and Fragmentation of Subtropical Rainforest. <i>Conservation Biology</i> , 2013, 27, 1468-1477.                            | 4.7 | 12        |
| 100 | A broader perspective on plant domestication and nutrient and carbon cycling. <i>New Phytologist</i> , 2013, 198, 331-333.  | 7.3 | 12        |
| 101 | Increases in CO <sub>2</sub> from past low to future high levels result in "lower" strategies on the leaf economic spectrum. <i>Perspectives in Plant Ecology, Evolution and Systematics</i> , 2017, 29, 41-50. | 2.7 | 12        |
| 102 | Pelagic citizen science data reveal declines of seabirds off south-eastern Australia. <i>Biological Conservation</i> , 2019, 235, 226-235.  | 4.1 | 12        |
| 103 | An evolutionary attractor model for sapwood cross section in relation to leaf area. <i>Journal of Theoretical Biology</i> , 2012, 303, 98-109.  | 1.7 | 10        |
| 104 | Shifts in fine root traits within and among species along a fine-scale hydrological gradient. <i>Annals of Botany</i> , 2021, 127, 473-481.   | 2.9 | 9         |
| 105 | Impact of land-use on carbon storage as dependent on soil texture: Evidence from a desertified dryland using repeated paired sampling design. <i>Journal of Environmental Management</i> , 2015, 150, 489-498.  | 7.8 | 8         |
