

Lance J Stewart

List of Publications by Citations

Source: <https://exaly.com/author-pdf/9223190/lance-j-stewart-publications-by-citations.pdf>

Version: 2024-04-26

This document has been generated based on the publications and citations recorded by exaly.com. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
25	Massively parallel de novo protein design for targeted therapeutics. <i>Nature</i> , 2017 , 550, 74-79	50.4	235
24	De novo design of picomolar SARS-CoV-2 miniprotein inhibitors. <i>Science</i> , 2020 , 370, 426-431	33.3	219
23	Induction of Potent Neutralizing Antibody Responses by a Designed Protein Nanoparticle Vaccine for Respiratory Syncytial Virus. <i>Cell</i> , 2019 , 176, 1420-1431.e17	56.2	190
22	De novo design of potent and selective mimics of IL-2 and IL-15. <i>Nature</i> , 2019 , 565, 186-191	50.4	184
21	Enhancing and shaping the immunogenicity of native-like HIV-1 envelope trimers with a two-component protein nanoparticle. <i>Nature Communications</i> , 2019 , 10, 4272	17.4	80
20	De novo design of self-assembling helical protein filaments. <i>Science</i> , 2018 , 362, 705-709	33.3	78
19	Computational design of transmembrane pores. <i>Nature</i> , 2020 , 585, 129-134	50.4	56
18	De novo design of modular and tunable protein biosensors. <i>Nature</i> , 2021 , 591, 482-487	50.4	53
17	Quadrivalent influenza nanoparticle vaccines induce broad protection. <i>Nature</i> , 2021 , 592, 623-628	50.4	40
16	A Computationally Designed Hemagglutinin Stem-Binding Protein Provides In Vivo Protection from Influenza Independent of a Host Immune Response. <i>PLoS Pathogens</i> , 2016 , 12, e1005409	7.6	36
15	Designed proteins assemble antibodies into modular nanocages. <i>Science</i> , 2021 , 372,	33.3	35
14	Three structurally and functionally distinct β glucuronidases from the human gut microbe. <i>Journal of Biological Chemistry</i> , 2018 , 293, 18559-18573	5.4	24
13	Design of protein binding proteins from target structure alone.. <i>Nature</i> , 2022 ,	50.4	13
12	Anchor extension: a structure-guided approach to design cyclic peptides targeting enzyme active sites. <i>Nature Communications</i> , 2021 , 12, 3384	17.4	12
11	Ultrapotent miniproteins targeting the SARS-CoV-2 receptor-binding domain protect against infection and disease. <i>Cell Host and Microbe</i> , 2021 , 29, 1151-1161.e5	23.4	11
10	Structures and disulfide cross-linking of de novo designed therapeutic mini-proteins. <i>FEBS Journal</i> , 2018 , 285, 1783-1785	5.7	6
9	Transferrin receptor targeting by de novo sheet extension. <i>Proceedings of the National Academy of Sciences of the United States of America</i> , 2021 , 118,	11.5	6

8	Designed proteins assemble antibodies into modular nanocages 2020 ,		5
7	Multivalent designed proteins protect against SARS-CoV-2 variants of concern 2021 ,		4
6	Multivalent designed proteins neutralize SARS-CoV-2 variants of concern and confer protection against infection in mice.. <i>Science Translational Medicine</i> , 2022 , 14, eabn1252	17.5	3
5	Large-scale design and refinement of stable proteins using sequence-only models		2
4	Ultrapotent miniproteins targeting the receptor-binding domain protect against SARS-CoV-2 infection and disease in mice 2021 ,		1
3	Detection of antibodies neutralizing historical and emerging SARS-CoV-2 strains using a thermodynamically coupled de novo biosensor system 2021 ,		1
2	Robust de novo design of protein binding proteins from target structural information alone		1
1	Large-scale design and refinement of stable proteins using sequence-only models.. <i>PLoS ONE</i> , 2022 , 17, e0265020	3.7	0
