#	ARTICLE	IF	CITATIONS
1	Interplay of physical activity and genetic variants of the endothelial lipase on cardiovascular disease risk factors. <i>Pediatric Research</i> , 2022, 91, 929-936.	1.1	2
2	Interplay between genetics and lifestyle on pain susceptibility in women with fibromyalgia: the al-Andalus project. <i>Rheumatology</i> , 2022, 61, 3180-3191.	0.9	4
3	Novel brown adipose tissue candidate genes predicted by the human gene connectome. <i>Scientific Reports</i> , 2022, 12, 7614.	1.6	1
4	Development of a Genetic Risk Score to predict the risk of overweight and obesity in European adolescents from the HELENA study. <i>Scientific Reports</i> , 2021, 11, 3067.	1.6	17
5	Fatigue in Women with Fibromyalgia: A Gene-Physical Activity Interaction Study. <i>Journal of Clinical Medicine</i> , 2021, 10, 1902.	1.0	2
6	Decreased recent adaptation at human mendelian disease genes as a possible consequence of interference between advantageous and deleterious variants. <i>ELife</i> , 2021, 10, .	2.8	13
7	Arid environments select for larger seeds in pines (<i>Pinus</i> spp.). <i>Evolutionary Ecology</i> , 2020, 34, 11-26.	0.5	11
8	Single nucleotide polymorphisms of ADIPOQ gene associated with cardiovascular disease risk factors in European adolescents: the Healthy Lifestyle in Europe by Nutrition in Adolescence study. <i>Journal of Hypertension</i> , 2020, 38, 1971-1979.	0.3	3
9	Interaction Effect of the Mediterranean Diet and an Obesity Genetic Risk Score on Adiposity and Metabolic Syndrome in Adolescents: The HELENA Study. <i>Nutrients</i> , 2020, 12, 3841.	1.7	11
10	Association between CNTF Polymorphisms and Adiposity Markers in European Adolescents. <i>Journal of Pediatrics</i> , 2020, 219, 23-30.e1.	0.9	2
11	Association of UCP1, UCP2 and UCP3 gene polymorphisms with cardiovascular disease risk factors in European adolescents: the HELENA study. <i>Pediatric Research</i> , 2020, 88, 265-270.	1.1	1
12	Association between lipoprotein lipase gene polymorphisms and cardiovascular disease risk factors in European adolescents: The Healthy Lifestyle in Europe by Nutrition in Adolescence study. <i>Pediatric Diabetes</i> , 2020, 21, 747-757.	1.2	5
13	Obesity and climate adaptation. <i>Evolution, Medicine and Public Health</i> , 2019, 2019, 104-105.	1.1	0
14	The evolution of seed dispersal is associated with environmental heterogeneity in <i>Pinus</i> . <i>Perspectives in Plant Ecology, Evolution and Systematics</i> , 2019, 41, 125464.	1.1	10
15	Association between <i>UCP1</i> , <i>UCP2</i> , and <i>UCP3</i> gene polymorphisms with markers of adiposity in European adolescents: The HELENA study. <i>Pediatric Obesity</i> , 2019, 14, e12504.	1.4	10
16	THU0468...THE INTERACTIONS OF PHYSICAL ACTIVITY LEVELS WITH THE SODIUM CHANNEL PROTEIN TYPE 9 SUBUNIT ALPHA AND METHYLENE TETRAHYDROFOLATE REDUCTASE GENES ARE ASSOCIATED WITH FATIGUE IN WOMEN WITH FIBROMYALGIA. , 2019, .		0
17	Gas exchange at whole plant level shows that a less conservative water use is linked to a higher performance in three ecologically distinct pine species. <i>Environmental Research Letters</i> , 2018, 13, 045004.	2.2	16
18	The "isohydric trap": A proposed feedback between water shortage, stomatal regulation, and nutrient acquisition drives differential growth and survival of European pines under climatic dryness. <i>Global Change Biology</i> , 2018, 24, 4069-4083.	4.2	67
