#	Article	IF	Citations
1	ECTRIMS/EAN Guideline on the pharmacological treatment of people with multiple sclerosis. Multiple Sclerosis Journal, 2018, 24, 96-120.	1.4	458
2	Ofatumumab versus Teriflunomide in Multiple Sclerosis. New England Journal of Medicine, 2020, 383, 546-557.	13.9	358
3	Destruction of neurons by cytotoxic T cells: A new pathogenic mechanism in rasmussen's encephalitis. Annals of Neurology, 2002, 51, 311-318.	2.8	353
4	Early detrimental T-cell effects in experimental cerebral ischemia are neither related to adaptive immunity nor thrombus formation. Blood, 2010, 115, 3835-3842.	0.6	315
5	Expression of the B7-related molecule B7-H1 by glioma cells: a potential mechanism of immune paralysis. Cancer Research, 2003, 63, 7462-7.	0.4	312
6	A Functional Role of HLA-G Expression in Human Gliomas: An Alternative Strategy of Immune Escape. Journal of Immunology, 2002, 168, 4772-4780.	0.4	310
7	Regulatory T cells are strong promoters of acute ischemic stroke in mice by inducing dysfunction of the cerebral microvasculature. Blood, 2013, 121, 679-691.	0.6	300
8	Blockade of PD-L1 (B7-H1) augments human tumor-specific T cell responsein vitro. International Journal of Cancer, 2006, 119, 317-327.	2.3	276
9	Teriflunomide and Its Mechanism of Action in Multiple Sclerosis. Drugs, 2014, 74, 659-674.	4.9	274
10	Clinical Relevance of Brain Volume Measures in Multiple Sclerosis. CNS Drugs, 2014, 28, 147-156.	2.7	254
11	Interferon-Î² enhances monocyte and dendritic cell expression of B7-H1 (PD-L1), a strong inhibitor of autologous T-cell activation: relevance for the immune modulatory effect in multiple sclerosis. Journal of Neuroimmunology, 2004, 155, 172-182.	1.1	249
12	Daclizumab HYP versus Interferon Beta-1a in Relapsing Multiple Sclerosis. New England Journal of Medicine, 2015, 373, 1418-1428.	13.9	245
13	Integrated single cell analysis of blood and cerebrospinal fluid leukocytes in multiple sclerosis. Nature Communications, 2020, 11, 247.	5.8	242
14	A PD-1 polymorphism is associated with disease progression in multiple sclerosis. Annals of Neurology, 2005, 58, 50-57.	2.8	203
15	The role of regulatory T cells in multiple sclerosis. Nature Clinical Practice Neurology, 2008, 4, 384-398.	2.7	189
16	Dendritic Cells Ameliorate Autoimmunity in the CNS by Controlling the Homeostasis of PD-1 Receptor+ Regulatory T Cells. Immunity, 2012, 37, 264-275.	6.6	184
17	Diagnostic criteria for Susac syndrome. Journal of Neurology, Neurosurgery and Psychiatry, 2016, 87, 1287-1295.	0.9	184
18	Clinical features, pathogenesis, and treatment of myasthenia gravis: a supplement to the Guidelines of the German Neurological Society. Journal of Neurology, 2016, 263, 1473-1494.	1.8	179

#	Article	IF	Citations
19	Immunobiology of muscle: advances in understanding an immunological microenvironment. Trends in Immunology, 2005, 26, 373-380.	2.9	175
20	Expression of the immune-tolerogenic major histocompatibility molecule HLA-G in multiple sclerosis: implications for CNS immunity. Brain, 2005, 128, 2689-2704.	3.7	170
21	Safety and clinical outcomes of rituximab therapy in patients with different autoimmune diseases: experience from a national registry (GRAID). Arthritis Research and Therapy, 2011, 13, R75.	1.6	170
22	Therapeutic Approaches in Multiple Sclerosis. BioDrugs, 2002, 16, 183-200.	2.2	167
23	Alemtuzumab in Multiple Sclerosis: Mechanism of Action and Beyond. International Journal of Molecular Sciences, 2015, 16, 16414-16439.	1.8	167
24	HLA-G expression defines a novel regulatory T-cell subset present in human peripheral blood and sites of inflammation. Blood, 2007, 110, 568-577.	0.6	162
25	Impaired NK-mediated regulation of T-cell activity in multiple sclerosis is reconstituted by IL-2 receptor modulation. Proceedings of the National Academy of Sciences of the United States of America, 2016, 113, E2973-82.	3.3	157
26	Efficacy and safety of natalizumab in multiple sclerosis: interim observational programme results. Journal of Neurology, Neurosurgery and Psychiatry, 2014, 85, 1190-1197.	0.9	156
27	Microglial Expression of the B7 Family Member B7 Homolog 1 Confers Strong Immune Inhibition: Implications for Immune Responses and Autoimmunity in the CNS. Journal of Neuroscience, 2005, 25, 2537-2546.	1.7	150
28	Clinical relevance of specific T-cell activation in the blood and cerebrospinal fluid of patients with mild Alzheimer's disease. Neurobiology of Aging, 2015, 36, 81-89.	1.5	141
29	<scp>l</scp> -Selectin is a possible biomarker for individual PML risk in natalizumab-treated MS patients. Neurology, 2013, 81, 865-871.	1.5	140
30	Endothelial TWIK-related potassium channel-1 (TREK1) regulates immune-cell trafficking into the CNS. Nature Medicine, 2013, 19, 1161-1165.	15.2	136
31	Sodium chloride promotes pro-inflammatory macrophage polarization thereby aggravating CNS autoimmunity. Journal of Autoimmunity, 2016, 67, 90-101.	3.0	136
32	VLA-4 blockade promotes differential routes into human CNS involving PSGL-1 rolling of T cells and MCAM-adhesion of TH17 cells. Journal of Experimental Medicine, 2014, 211, 1833-1846.	4.2	134
33	Novel multiple sclerosis susceptibility loci implicated in epigenetic regulation. Science Advances, 2016, 2, e1501678.	4.7	133
34	CD8+ T-cell clones dominate brain infiltrates in Rasmussen encephalitis and persist in the periphery. Brain, 2009, 132, 1236-1246.	3.7	131
35	The Coagulation Factors Fibrinogen, Thrombin, and Factor XII in Inflammatory Disordersâ€"A Systematic Review. Frontiers in Immunology, 2018, 9, 1731.	2.2	130
36	CD4⁺T effector memory cell dysfunction is associated with the accumulation of granulocytic myeloid-derived suppressor cells in glioblastoma patients. Neuro-Oncology, 2016, 18, 807-818.	0.6	129

#	ARTICLE	IF	CITATIONS
37	How patients with multiple sclerosis acquire disability. Brain, 2022, 145, 3147-3161.	3.7	126
38	Endothelial Basement Membrane Laminin 511 Contributes to Endothelial Junctional Tightness and Thereby Inhibits Leukocyte Transmigration. Cell Reports, 2017, 18, 1256-1269.	2.9	125
39	Neurological Manifestations of COVID-19 Feature T Cell Exhaustion and Dedifferentiated Monocytes in Cerebrospinal Fluid. Immunity, 2021, 54, 164-175.e6.	6.6	119
40	Dimethyl fumarate treatment alters circulating T helper cell subsets in multiple sclerosis. Neurology: Neuroimmunology and NeuroInflammation, 2016, 3, e183.	3.1	117
41	Low-Frequency and Rare-Coding Variation Contributes to Multiple Sclerosis Risk. Cell, 2018, 175, 1679-1687.e7.	13.5	115
42	Muscle fibres and cultured muscle cells express the B7.1/2-related inducible co-stimulatory molecule, ICOSL: implications for the pathogenesis of inflammatory myopathies. Brain, 2003, 126, 1026-1035.	3.7	112
43	Myelin Oligodendrocyte Glycoprotein (MOG<sub>35-55</sub>) Induced Experimental Autoimmune Encephalomyelitis (EAE) in C57BL/6 Mice. Journal of Visualized Experiments, 2014, , .	0.2	110
44	Switching from natalizumab to fingolimod. Neurology, 2015, 85, 29-39.	1.5	110
45	Guidance for the management of myasthenia gravis (MG) and Lambert-Eaton myasthenic syndrome (LEMS) during the COVID-19 pandemic. Journal of the Neurological Sciences, 2020, 412, 116803.	0.3	110
46	Immune Cells Contribute to Myelin Degeneration and Axonopathic Changes in Mice Overexpressing Proteolipid Protein in Oligodendrocytes. Journal of Neuroscience, 2006, 26, 8206-8216.	1.7	109
47	Blood coagulation factor XII drives adaptive immunity during neuroinflammation via CD87-mediated modulation of dendritic cells. Nature Communications, 2016, 7, 11626.	5.8	105
48	Pathology of immune reconstitution inflammatory syndrome in multiple sclerosis with natalizumab-associated progressive multifocal leukoencephalopathy. Acta Neuropathologica, 2012, 123, 235-245.	3.9	104
49	Single-cell profiling of CNS border compartment leukocytes reveals that B cells and their progenitors reside in non-diseased meninges. Nature Neuroscience, 2021, 24, 1225-1234.	7.1	103
50	Natalizumab-associated PML. Neurology, 2017, 88, 1197-1205.	1.5	102
51	<scp>NMDAR</scp> encephalitis: passive transfer from man to mouse by a recombinant antibody. Annals of Clinical and Translational Neurology, 2017, 4, 768-783.	1.7	101
52	Ultraviolet B light attenuates the systemic immune response in central nervous system autoimmunity. Annals of Neurology, 2014, 75, 739-758.	2.8	100
53	CD8+ T-cell pathogenicity in Rasmussen encephalitis elucidated by large-scale T-cell receptor sequencing. Nature Communications, 2016, 7, 11153.	5.8	98
54	Long-term safety and effectiveness of natalizumab treatment in clinical practice: 10 years of real-world data from the Tysabri Observational Program (TOP). Journal of Neurology, Neurosurgery and Psychiatry, 2020, 91, 660-668.	0.9	97

#	Article	IF	Citations
55	Stromal Interaction Molecules 1 and 2 Are Key Regulators of Autoreactive T Cell Activation in Murine Autoimmune Central Nervous System Inflammation. Journal of Immunology, 2010, 184, 1536-1542.	0.4	96
56	Human muscle cells express a B7â€related molecule, B7â€H1, with strong negative immune regulatory potential: a novel mechanism of counterbalancing the immune attack in idiopathic inflammatory myopathies. FASEB Journal, 2003, 17, 1-16.	0.2	95
57	Imaging matrix metalloproteinase activity in multiple sclerosis as a specific marker of leukocyte penetration of the blood-brain barrier. Science Translational Medicine, 2016, 8, 364ra152.	5.8	94
58	Nur77 serves as a molecular brake of the metabolic switch during T cell activation to restrict autoimmunity. Proceedings of the National Academy of Sciences of the United States of America, 2018, 115, E8017-E8026.	3.3	93
59	Anti-JC virus antibody prevalence in a multinational multiple sclerosis cohort. Multiple Sclerosis Journal, 2013, 19, 1533-1538.	1.4	92
60	Teriflunomide treatment for multiple sclerosis modulates T cell mitochondrial respiration with affinity-dependent effects. Science Translational Medicine, 2019, 11, .	5.8	92
61	Immune Cell Activation in the Cerebrospinal Fluid of Patients With Parkinson's Disease. Frontiers in Neurology, 2018, 9, 1081.	1.1	91
62	CNS inflammation and neuronal degeneration is aggravated by impaired CD200â€"CD200R-mediated macrophage silencing. Journal of Neuroimmunology, 2008, 194, 62-69.	1.1	89
63	TWIK-related Acid-sensitive K+ Channel 1 (TASK1) and TASK3 Critically Influence T Lymphocyte Effector Functions. Journal of Biological Chemistry, 2008, 283, 14559-14570.	1.6	89
64	Detrimental Contribution of the Immuno-Inhibitor B7-H1 to Rabies Virus Encephalitis. Journal of Immunology, 2008, 180, 7506-7515.	0.4	89
65	Muscle fibers in inflammatory myopathies and cultured myoblasts express the nonclassical major histocompatibility antigen HLA-G. Annals of Neurology, 2000, 48, 679-684.	2.8	88
66	TASK1 modulates inflammation and neurodegeneration in autoimmune inflammation of the central nervous system. Brain, 2009, 132, 2501-2516.	3.7	88
67	Neurons as targets for T cells in the nervous system. Trends in Neurosciences, 2013, 36, 315-324.	4.2	88
68	Regulatory Functions of Natural Killer Cells in Multiple Sclerosis. Frontiers in Immunology, 2016, 7, 606.	2.2	88
69	Computed tomographyâ€"based quantification of lesion water uptake identifies patients within 4.5 hours of stroke onset: A multicenter observational study. Annals of Neurology, 2016, 80, 924-934.	2.8	88
70	Programmed Cell Death-1 Deficiency Exacerbates T Cell Activation and Atherogenesis despite Expansion of Regulatory T Cells in Atherosclerosis-Prone Mice. PLoS ONE, 2014, 9, e93280.	1.1	87
71	A nonsynonymous mutation in PLCG2 reduces the risk of Alzheimerâ€™s disease, dementia with Lewy bodies and frontotemporal dementia, and increases the likelihood of longevity. Acta Neuropathologica, 2019, 138, 237-250.	3.9	87
72	CD8+ T cell-mediated endotheliopathy is a targetable mechanism of neuro-inflammation in Susac syndrome. Nature Communications, 2019, 10, 5779.	5.8	87

#	Article	IF	Citations
73	Targeting Ewing sarcoma with activated and GD2-specific chimeric antigen receptor-engineered human NK cells induces upregulation of immune-inhibitory HLA-G. OncoImmunology, 2017, 6, e1250050.	2.1	86
74	Multiple Sclerosis Therapy Consensus Group (MSTCG): position statement on disease-modifying therapies for multiple sclerosis (white paper). Therapeutic Advances in Neurological Disorders, 2021, 14, 175628642110396.	1.5	86
75	CD8+ T cells and neuronal damage: direct and collateral mechanisms of cytotoxicity and impaired electrical excitability. FASEB Journal, 2009, 23, 3659-3673.	0.2	85
76	COVID-19-associated risks and effects in myasthenia gravis (CARE-MG). Lancet Neurology, The, 2020, 19, 970-971.	4.9	85
77	Alemtuzumab treatment alters circulating innate immune cells in multiple sclerosis. Neurology: Neuroimmunology and NeuroInflammation, 2016, 3, e289.	3.1	84
78	Optimizing therapy early in multiple sclerosis: An evidence-based view. Multiple Sclerosis and Related Disorders, 2015, 4, 460-469.	0.9	83
79	Distinct cognitive impairments in different disease courses of multiple sclerosis—A systematic review and meta-analysis. Neuroscience and Biobehavioral Reviews, 2017, 83, 568-578.	2.9	83
80	Risks and risk management in modern multiple sclerosis immunotherapeutic treatment. Therapeutic Advances in Neurological Disorders, 2019, 12, 175628641983657.	1.5	83
81	Monocyte-derived HLA-G acts as a strong inhibitor of autologous CD4 T cell activation and is upregulated by interferon-β in vitro and in vivo: rationale for the therapy of multiple sclerosis. Journal of Neuroimmunology, 2005, 159, 155-164.	1.1	82
82	Fingolimod treatment promotes regulatory phenotype and function of B cells. Annals of Clinical and Translational Neurology, 2015, 2, 119-130.	1.7	82
83	Expression of toll-like receptors by human muscle cells in vitro and in vivo: TLR3 is highly expressed in inflammatory and HIV myopathies, mediates IL-8 release, and up-regulation of NKG2D-ligands. FASEB Journal, 2006, 20, 118-120.	0.2	81
84	Immunoadsorption therapy in autoimmune encephalitides. Neurology: Neuroimmunology and NeuroInflammation, 2016, 3, e207.	3.1	81
85	The non-classical MHC molecule HLA-G protects human muscle cells from immune-mediated lysis: implications for myoblast transplantation and gene therapy. Brain, 2003, 126, 176-185.	3.7	80
86	Greater sensitivity to multiple sclerosis disability worsening and progression events using a roving versus a fixed reference value in a prospective cohort study. Multiple Sclerosis Journal, 2018, 24, 963-973.	1.4	79
87	Cytotoxic CD8+ T Cell—Neuron Interactions: Perforin-Dependent Electrical Silencing Precedes But Is Not Causally Linked to Neuronal Cell Death. Journal of Neuroscience, 2009, 29, 15397-15409.	1.7	78
88	Blocking of α4 Integrin Does Not Protect From Acute Ischemic Stroke in Mice. Stroke, 2014, 45, 1799-1806.	1.0	78
89	Blockade of the kinin receptor B1 protects from autoimmune CNS disease by reducing leukocyte trafficking. Journal of Autoimmunity, 2011, 36, 106-114.	3.0	77
90	A β-Lactam Antibiotic Dampens Excitotoxic Inflammatory CNS Damage in a Mouse Model of Multiple Sclerosis. PLoS ONE, 2008, 3, e3149.	1.1	76

#	Article	IF	Citations
91	T cell suppression by naturally occurring HLA-G-expressing regulatory CD4+ T cells is IL-10-dependent and reversible. Journal of Leukocyte Biology, 2009, 86, 273-281.	1.5	76
92	Collateral Bystander Damage by Myelin-Directed CD8+ T Cells Causes Axonal Loss. American Journal of Pathology, 2009, 175, 1160-1166.	1.9	75
93	Skeletal muscle cells actively shape (auto)immune responses. Autoimmunity Reviews, 2018, 17, 518-529.	2.5	74
94	Primary angiitis of the central nervous system: diagnosis and treatment. Therapeutic Advances in Neurological Disorders, 2018, 11, 175628641878507.	1.5	74
95	B7â€H1 restricts neuroantigenâ€specific T cell responses and confines inflammatory CNS damage: Implications for the lesion pathogenesis of multiple sclerosis. European Journal of Immunology, 2008, 38, 1734-1744.	1.6	72
96	Immune mechanisms of stroke. Current Opinion in Neurology, 2012, 25, 334-340.	1.8	71
97	Modulation of IL-2RÎ± with daclizumab for treatment of multiple sclerosis. Nature Reviews Neurology, 2013, 9, 394-404.	4.9	71
98	Immune reconstitution therapies: concepts for durable remission in multiple sclerosis. Nature Reviews Neurology, 2020, 16, 56-62.	4.9	71
99	The role of dendritic cells in CNS autoimmunity. Journal of Molecular Medicine, 2010, 88, 535-544.	1.7	70
100	Why Most Acute Stroke Studies Are Positive in Animals but Not in Patients: A Systematic Comparison of Preclinical, Early Phase, and Phase 3 Clinical Trials of Neuroprotective Agents. Annals of Neurology, 2020, 87, 40-51.	2.8	69
101	Specific central nervous system recruitment of HLAâ€G[+] regulatory T cells in multiple sclerosis. Annals of Neurology, 2009, 66, 171-183.	2.8	67
102	From the Background to the Spotlight: TASK Channels in Pathological Conditions. Brain Pathology, 2010, 20, 999-1009.	2.1	67
103	CD28 Superagonist-Mediated Boost of Regulatory T Cells Increases Thrombo-Inflammation and Ischemic Neurodegeneration during the Acute Phase of Experimental Stroke. Journal of Cerebral Blood Flow and Metabolism, 2015, 35, 6-10.	2.4	67
104	Clinical implications of serum neurofilament in newly diagnosed MS patients: A longitudinal multicentre cohort study. EBioMedicine, 2020, 56, 102807.	2.7	67
105	Rasmussen encephalitis treated with natalizumab. Neurology, 2013, 81, 395-397.	1.5	66
106	Therapy with natalizumab is associated with high JCV seroconversion and rising JCV index values. Neurology: Neuroimmunology and NeuroInflammation, 2016, 3, e195.	3.1	66
107	Complete Epstein-Barr virus seropositivity in a large cohort of patients with early multiple sclerosis. Journal of Neurology, Neurosurgery and Psychiatry, 2020, 91, 681-686.	0.9	66
108	Intracerebral Dendritic Cells Critically Modulate Encephalitogenic versus Regulatory Immune Responses in the CNS. Journal of Neuroscience, 2009, 29, 140-152.	1.7	65

#	Article	IF	Citations
