#	ARTICLE	IF	CITATIONS
1	Molecular Recognition, Transient Chirality and Sulfur Hydrogen Bonding in the Benzyl Mercaptan Dimer. <i>Symmetry</i> , 2021, 13, 2022.	1.1	11
2	Chirality-Puckering correlation and intermolecular interactions in Sphingosines: Rotational spectroscopy of jaspine B3 and its monohydrate. <i>Spectrochimica Acta - Part A: Molecular and Biomolecular Spectroscopy</i> , 2021, 267, 120531.	2.0	1
3	Sulfur hydrogen bonding and internal dynamics in the monohydrates of thenyl mercaptan and thenyl alcohol. <i>Physical Chemistry Chemical Physics</i> , 2020, 22, 12412-12421.	1.3	21
4	Rotational spectroscopy of organophosphorous chemical agents: cresyl and phenyl saligenin phosphates. <i>Physical Chemistry Chemical Physics</i> , 2019, 21, 16418-16422.	1.3	0
5	An Efficient Microkinetic Modeling Protocol: Start with Only the Dominant Mechanisms, Adjust All Parameters, and Build the Complete Model Incrementally. <i>ACS Catalysis</i> , 2019, 9, 4804-4809.	5.5	13
6	Sulfur Hydrogen Bonding in Isolated Monohydrates: Furfuryl Mercaptan versus Furfuryl Alcohol. <i>Chemistry - A European Journal</i> , 2018, 24, 6564-6571.	1.7	27
7	Rotational spectra of tetracyclic quinolizidine alkaloids: does a water molecule flip sparteine?. <i>Physical Chemistry Chemical Physics</i> , 2017, 19, 17553-17559.	1.3	4
8	A DFT-Based Computational-Experimental Methodology for Synthetic Chemistry: Example of Application to the Catalytic Opening of Epoxides by Titanocene. <i>Journal of Organic Chemistry</i> , 2017, 82, 3760-3766.	1.7	12
9	Physical modeling and implementation scheme of native defect diffusion and interdiffusion in SiGe heterostructures for atomistic process simulation. <i>Journal of Applied Physics</i> , 2011, 109, .	1.1	27
10	Atomistic modeling of defect diffusion and interdiffusion in SiGe heterostructures. <i>Thin Solid Films</i> , 2010, 518, 2448-2453.	0.8	6
11	The use of extended-defect dissolution as a probe for stress-induced interstitial diffusion anisotropy. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2008, 154-155, 260-263.	1.7	5
12	Comprehensive model of damage accumulation in silicon. <i>Journal of Applied Physics</i> , 2008, 103, .	1.1	16
13	Current Capabilities and Future Prospects of Atomistic Process Simulation. , 2007, , .		0
14	Modeling charged defects, dopant diffusion and activation mechanisms for TCAD simulations using kinetic Monte Carlo. <i>Nuclear Instruments & Methods in Physics Research B</i> , 2006, 253, 63-67.	0.6	19
15	Bimodal distribution of damage morphology generated by ion implantation. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2005, 124-125, 389-391.	1.7	0
16	Dose loss and segregation of boron and arsenic at the Si/SiO ₂ interface by atomistic kinetic Monte Carlo simulations. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2005, 124-125, 392-396.	1.7	6
17	Comprehensive modeling of ion-implant amorphization in silicon. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2005, 124-125, 383-385.	1.7	4
18	Ion-implant simulations: The effect of defect spatial correlation on damage accumulation. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2005, 124-125, 386-388.	1.7	0

#	ARTICLE	IF	CITATIONS
19	Physically based modeling of dislocation loops in ion implantation processing in silicon. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2005, 124-125, 404-408.	1.7	7
20	Fermi-level effects in semiconductor processing: A modeling scheme for atomistic kinetic Monte Carlo simulators. <i>Journal of Applied Physics</i> , 2005, 98, 053709.	1.1	12
21	Physical atomistic kinetic Monte Carlo modeling of Fermi-level effects of species diffusing in silicon. <i>Physical Review B</i> , 2005, 72, .	1.1	27
22	Modeling arsenic deactivation through arsenic-vacancy clusters using an atomistic kinetic Monte Carlo approach. <i>Applied Physics Letters</i> , 2005, 86, 252103.	1.5	31
23	Ion-beam amorphization of semiconductors: A physical model based on the amorphous pocket population. <i>Journal of Applied Physics</i> , 2005, 98, 046104.	1.1	21
24	Ion implant simulations: Kinetic Monte Carlo annealing assessment of the dominant features. <i>Applied Physics Letters</i> , 2004, 84, 4962-4964.	1.5	6
25	Physical modeling of Fermi-level effects for decanano device process simulations. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2004, 114-115, 284-289.	1.7	6
26	Comprehensive, physically based modelling of As in Si. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2004, 114-115, 135-140.	1.7	5
27	Physically based modelling of damage, amorphization, and recrystallization for predictive device-size process simulation. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2004, 114-115, 151-155.	1.7	14
28	A kinetic Monte Carlo annealing assessment of the dominant features from ion implant simulations. <i>Materials Science and Engineering B: Solid-State Materials for Advanced Technology</i> , 2004, 114-115, 345-348.	1.7	2
29	Carbon in silicon: Modeling of diffusion and clustering mechanisms. <i>Journal of Applied Physics</i> , 2002, 92, 1582-1587.	1.1	82
30	Atomistic Modeling of Complex Silicon Processing Scenarios. <i>Materials Research Society Symposia Proceedings</i> , 2000, 610, 1111.	0.1	6
31	The Effect of Carbon/Self-Interstitial Clusters on Carbon Diffusion in Silicon Modeled by Kinetic Monte Carlo Simulations. <i>Materials Research Society Symposia Proceedings</i> , 2000, 610, 721.	0.1	4
32	Dominant iron gettering mechanism in p/p+ silicon wafers. <i>Applied Physics Letters</i> , 2000, 77, 241-243.	1.5	10
33	Electrical characterization of He-ion implantation-induced deep levels in p+n InP junctions. <i>Journal of Applied Physics</i> , 1999, 86, 4855-4860.	1.1	0
34	Electrical characterization of a He ion implantation-induced deep level existing in p+n InP junctions. <i>Journal of Applied Physics</i> , 1999, 85, 7978-7980.	1.1	1
35	Title is missing!. <i>Journal of Materials Science: Materials in Electronics</i> , 1999, 10, 413-418.	1.1	0
36	Title is missing!. <i>Journal of Materials Science: Materials in Electronics</i> , 1999, 10, 373-377.	1.1	3

#	ARTICLE	IF	CITATIONS
37	Electrical characterization of deep levels existing in Mg-Si- and Mg-P-Si-implanted n InP junctions. Semiconductor Science and Technology, 1998, 13, 389-393.	1.0	2
38	Detailed electrical characterization of DXcenters in Se-doped Al _x Ga _{1-x} As. Journal of Applied Physics, 1997, 82, 4338-4345.	1.1	6
39	Deep levels in p+-n junctions fabricated by rapid thermal annealing of Mg or Mg/P implanted InP. Journal of Applied Physics, 1997, 81, 3143-3150.	1.1	5
40	Experimental observation of conductance transients in Al/SiN _x :H/Si metal-insulator-semiconductor structures. Applied Physics Letters, 1997, 71, 826-828.	1.5	45
41	Thermal emission processes of DX centres in Al _x Ga _{1-x} As:Si. Solid-State Electronics, 1997, 41, 103-109.	0.8	1
42	Dopant level freeze-out and nonideal effects in 6H-SiC epilayer junctions. Journal of Applied Physics, 1996, 79, 310-315.	1.1	3
