#	ARTICLE	IF	CITATIONS
1	Neonatal serotonin reuptake inhibition reduces hypercaloric diet effects on fat mass and hypothalamic gene expression in adult rats. <i>International Journal of Developmental Neuroscience</i> , 2015, 46, 76-81.	0.7	15
2	Neonatal fluoxetine exposure modulates serotonergic neurotransmission and disturb inhibitory action of serotonin on food intake. <i>Behavioural Brain Research</i> , 2019, 357-358, 65-70.	1.2	12
3	Repercussions of maternal exposure to high-fat diet on offspring feeding behavior and body composition: a systematic review. <i>Journal of Developmental Origins of Health and Disease</i> , 2021, 12, 220-228.	0.7	8
4	Maternal exposure to high-fat diet modifies anxiety-like/depression-like behaviors and compounds of Serotonergic System in offspring: A preclinical systematic review. <i>International Journal of Developmental Neuroscience</i> , 2021, 81, 371-385.	0.7	6
5	Neonatal administration of kaempferol does not alter satiety but increases somatic growth and reduces adiposity in offspring of high-fat diet dams. <i>Life Sciences</i> , 2020, 259, 118224.	2.0	5
6	Mastication in children and adolescents with overweight or obesity: a systematic review. <i>Revista De Nutricao</i> , 0, 34, .	0.4	0
7	Perinatal serotonergic activity: A decisive factor in the control of food intake. <i>Revista De Nutricao</i> , 2017, 30, 535-544.	0.4	0
