#	ARTICLE	IF	CITATIONS
1	Cardiac and renal upregulation of Nox2 and NF- κ B and repression of Nox4 and Nrf2 in season- and diabetes-mediated models of vascular oxidative stress in guinea-pig and rat. <i>Physiological Reports</i> , 2017, 5, e13474.	0.7	14
2	Omega-3 Fatty Acids Do Not Protect Against Arrhythmias in Acute Nonreperfused Myocardial Infarction Despite Some Antiarrhythmic Effects. <i>Journal of Cellular Biochemistry</i> , 2016, 117, 2570-2582.	1.2	7
3	Ivabradine Protects Against Ventricular Arrhythmias in Acute Myocardial Infarction in the Rat. <i>Journal of Cellular Physiology</i> , 2014, 229, 813-823.	2.0	31
4	Preserved cardiomyocyte function and altered desmin pattern in transgenic mouse model of dilated cardiomyopathy. <i>Journal of Molecular and Cellular Cardiology</i> , 2012, 52, 978-987.	0.9	20
5	ω -3 polyunsaturated fatty acid supplementation for the treatment of heart failure: mechanisms and clinical potential. <i>Cardiovascular Research</i> , 2009, 84, 33-41.	1.8	88
6	The Cardioprotective Effects of Fish Oil During Pressure Overload Are Blocked by High Fat Intake. <i>Hypertension</i> , 2009, 54, 605-611.	1.3	39
7	Fish oil, but not flaxseed oil, decreases inflammation and prevents pressure overload-induced cardiac dysfunction. <i>Cardiovascular Research</i> , 2009, 81, 319-327.	1.8	162
8	Low-Carbohydrate/High-Fat Diet Attenuates Pressure Overload-Induced Ventricular Remodeling and Dysfunction. <i>Journal of Cardiac Failure</i> , 2008, 14, 327-335.	0.7	42
9	High-sugar diets increase cardiac dysfunction and mortality in hypertension compared to low-carbohydrate or high-starch diets. <i>Journal of Hypertension</i> , 2008, 26, 1402-1410.	0.3	48
10	Potential impact of carbohydrate and fat intake on pathological left ventricular hypertrophy. <i>Cardiovascular Research</i> , 2007, 73, 257-268.	1.8	59
11	Dietary supplementation with ω -3 PUFA increases adiponectin and attenuates ventricular remodeling and dysfunction with pressure overload. <i>Cardiovascular Research</i> , 2007, 76, 303-310.	1.8	93
12	Low-density lipoprotein reduction by simvastatin is accompanied by angiotensin II type 1 receptor downregulation, reduced oxidative stress, and improved endothelial function in patients with stable coronary artery disease. <i>Coronary Artery Disease</i> , 2007, 18, 201-209.	0.3	10
13	Preconditioning protects endothelium by preventing ET-1-induced activation of NADPH oxidase and xanthine oxidase in post-ischemic heart. <i>Journal of Molecular and Cellular Cardiology</i> , 2007, 42, 400-410.	0.9	44
14	High Fructose Diet Increases Mortality in Hypertensive Rats Compared to a Complex Carbohydrate or High Fat Diet. <i>American Journal of Hypertension</i> , 2007, 20, 403-409.	1.0	53
15	Effect of classic preconditioning and diazoxide on endothelial function and O ₂ ^{•-} and NO generation in the post-ischemic guinea-pig heart. <i>Cardiovascular Research</i> , 2004, 63, 118-129.	1.8	32
