

CITATION REPORT

List of articles citing

Degradation Mechanism of Ni-Rich Cathode Materials: Focusing on Particle Interior

DOI: 10.1021/acsenergylett.2c01272
ACS Energy Letters, , , 2362-2369.

Version: 2024-04-27

This report has been generated based on the citations recorded by exaly.com for the above article. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

#	Paper	IF	Citations
26	Morphology-Dependent Battery Performance of Ni-Rich Layered Cathodes: Single-Crystal versus Refined Polycrystal. 3072-3079		0
25	Rational design of electrolyte solvation structure for stable cycling and fast charging lithium metal batteries. 2022 , 548, 232106		1
24	Synergistic regulation of kinetic reaction pathway and surface structure degradation in single-crystal high-nickel cathodes. 2023 , 629, 388-398		0
23	Practical conversion-type titanium telluride anodes for high-capacity long-lifespan rechargeable aqueous zinc batteries. 2022 , 10, 16976-16985		1
22	Research progress and prospect in element doping of lithium-rich layered oxides as cathode materials for lithium-ion batteries.		0
21	A New Insight into the Capacity Decay Mechanism of Ni-Rich Layered Oxide Cathode for Lithium-Ion Batteries. 2204613		1
20	Nanostructured Co-Free Layered Oxide Cathode that Affords Fast-Charging Lithium-Ion Batteries for Electric Vehicles. 2202719		2
19	Coating Ni-rich cathode with an amorphous carbon for improving the stability and electrochemical performance. 2022 , 36, 101356		0
18	Single-crystal Mn-based oxide as high-rate stable potassium cathode. 2022 ,		0
17	Improved electrochemical performance using well-dispersed carbon nanotubes as conductive additive in the Ni-rich positive electrode of lithium-ion batteries. 2023 , 146, 107419		0
16	Structural self-reconstruction strategy empowering Ni-rich layered cathodes with low-strain for superior cyclabilities.		2
15	Near-Atomic-Scale Evolution of the Surface Chemistry in Li[Ni,Mn,Co]O ₂ Cathode for Li-Ion Batteries Stored in Air. 2200121		0
14	Ni-Ion-Chelating Strategy for Mitigating the Deterioration of Li-Ion Batteries with Nickel-Rich Cathodes. 2205918		0
13	Unexpectedly High Cycling Stability Induced by a High Charge Cut-Off Voltage of Layered Sodium Oxide Cathodes. 2203216		0
12	Surface Stabilization of Cobalt-Free LiNiO ₂ with Niobium for Lithium-Ion Batteries. 2023 , 15, 1442-1451		0
11	Hydrofluoric Acid-Removable Additive Optimizing Electrode Electrolyte Interphases with Li + Conductive Moieties for 4.5V Lithium Metal Batteries. 2214422		3
10	Understanding the Effects of Tetrahedral Site Occupancy by the Zn Dopant in Li-NMCs toward High-Voltage Compositional/Structural/Mechanical Stability via Operando and 3D Atom Probe Tomography Studies. 2023 , 15, 782-794		0
