

The effects of cholinergic drugs and cholinergic-rich food on
alcohol-induced deficits in radial maze performance in rats

Behavioural Brain Research

43, 7-28

DOI: [10.1016/s0166-4328\(05\)80048-8](https://doi.org/10.1016/s0166-4328(05)80048-8)

Citation Report

#	ARTICLE	IF	CITATIONS
1	Effects of cholinergic-rich neural grafts on radial maze performance of rats after excitotoxic lesions of the forebrain cholinergic projection system ^I . Amelioration of cognitive deficits by transplants into cortex and hippocampus but not into basal forebrain. <i>Neuroscience</i> , 1991, 45, 587-607.	2.3	110
2	Effects of cholinergic-rich neural grafts on radial maze performance of rats after excitotoxic lesions of the forebrain cholinergic projection system ^{II} . Cholinergic drugs as probes to investigate lesion-induced deficits and transplant-induced functional recovery. <i>Neuroscience</i> , 1991, 45, 609-623.	2.3	87
3	Chronic ethanol consumption reduces the neurotrophic activity in rat hippocampus. <i>Neuroscience Letters</i> , 1992, 147, 77-80.	2.1	30
4	Effects of nicotine on spatial memory deficits in rats with septal lesions. <i>Brain Research</i> , 1992, 572, 281-285.	2.2	141
