Knowledge-based temporal abstraction in clinical domains

#	Paper	IF	Citations
222	Temporal diagnostic reasoning based on time-objects. *Artificial Intelligence in Medicine*, **1996**, 8, 235-65	7.4	23
221	The interpretation of time-varying data with DIAMON-1. *Artificial Intelligence in Medicine*, **1996**, 8, 343-57	7.4	41
220	Utilizing temporal data abstraction for data validation and therapy planning for artificially ventilated newborn infants. *Artificial Intelligence in Medicine*, **1996**, 8, 543-76	7.4	85
219	Dynamic temporal interpretation contexts for temporal abstraction.		4
218	EON: a component-based approach to automation of protocol-directed therapy. **1996**, 3, 367-88		201
217	Intelligent Data Analysis in Medicine and Pharmacology. **1997**,		31
216	Temporal Abstractions for diabetic patients management. **1997**, 319-330		14
215	Temporal scenario recognition for intelligent patient monitoring. **1997**, 331-342		4
214	Interpreting longitudinal data through temporal abstractions: An application to diabetic patients monitoring. **1997**, 287-298		
213	A task-specific ontology for the application and critiquing of time-oriented clinical guidelines. **1997**, 51-61		6
212	Knowledge-based temporal interpolation.		3
211	Advances in Intelligent Data Analysis Reasoning about Data. **1997**,		6
210	Temporal reasoning and temporal data maintenance in medicine: issues and challenges. **1997**, 27, 353-68		78
209	Abstract temporal diagnosis in medical domains. *Artificial Intelligence in Medicine*, **1997**, 10, 209-34	7.4	33
208	Applying object-oriented technologies in modeling and querying temporally oriented clinical databases dealing with temporal granularity and indeterminacy. **1997**, 1, 100-27		22
207	A framework for knowledge-based temporal abstraction. **1997**, 90, 79-133		293
206	Effective data validation of high-frequency data: time-point-, time-interval-, and trend-based methods. **1997**, 27, 389-409		34

187	Intelligent Analysis of Clinical Time Series by Combining Structural Filtering and Temporal Abstractions. **1999**, 261-270		4
186	Towards symbolization using data-driven extraction of local trends for ICU monitoring. *Artificial Intelligence in Medicine*, **2000**, 19, 203-23	7.4	21
185	Knowledge discovery and knowledge validation in intensive care. *Artificial Intelligence in Medicine*, **2000**, 19, 225-49	7.4	35
184	Intelligent analysis of clinical time series: an application in the diabetes mellitus domain. *Artificial Intelligence in Medicine*, **2000**, 20, 37-57	7.4	54
183	AI planning and scheduling in the medical hospital environment. *Artificial Intelligence in Medicine*, **2000**, 20, 101-11	7.4	43
182	CAPSUL: A constraint-based specification of repeating patterns in time-oriented data. **2000**, 30, 3-22		12
181	Building telemedicine systems for supporting decisions in diabetes care: a report from a running experience. **2000**, 2, 577-82		4
180	General Temporal Knowledge for Planning and Data Mining. **2001**, 33, 1-19		1
179	Abductive Diagnosis Using Time-Objects: Criteria for the Evaluation of Solutions. **2001**, 17, 87-131		2
178	A modular approach for representing and executing clinical guidelines. *Artificial Intelligence in Medicine*, **2001**, 23, 249-76	7.4	79
177	An approach to generating summaries of time series data in the gas turbine domain.		3
176	Artificial Intelligence in Medicine. **2001**,		8
175	Accurate clinical decision support for heart disease using models of different stratification bias.		0
174	Recognition of critical situations from time series of laboratory results by case-based reasoning. **2002**, 9, 520-8		16
173	Intelligent Alarms for Anaesthesia Monitoring Based on a Fuzzy Logic Approach. **2002**, 113-138		3
172	Computational Intelligence Processing in Medical Diagnosis. **2002**,		9
171	New Trends in Patient Monitoring. **2002**, 10, 291-306		3
