Version: 2024-04-28

This report has been generated based on the citations recorded by exaly.com for the above article. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

- 29 Demography and linked selection interact to shape the genomic landscape of codistributed woodpeckers during the Ice Age. ○
- 28 Phylogeny of *Saxifraga* section *Saxifraga* subsection *Arachnoideae* (*Saxifragaceae*) and the origin of low elevation shade-dwelling species. **2023**, 13, ○
- 27 Phylogenetic endemism of the world's seed plants. ○
- 26 Distinct Responses of European Beech (*Fagus sylvatica* L.) to Drought Intensity and Length: Review of the Impacts of the 2003 and 2018-2019 Drought Events in Central Europe. **2023**, 14, 248 ○
- 25 History cooling events contributed to the endangered status of *Pseudotsuga brevifolia* endemic to limestone habitats. **2023**, 42, e02414 ○
- 24 Potential distribution of two economic laver species-*Neoporphyra haitanensis* and *Neopyropia yezoensis* under climate change based on MaxEnt prediction and phylogeographic profiling. **2023**, 150, 110219 ○

- 23 Substrate affinities of wood decay fungi are foremost structured by wood properties not climate. **2023**, 63, 101231 ○
- 22 Moving beyond heritability in the search for coral adaptive potential. ○
- 21 Assessing risk from invasive alien plants in China: Reconstructing invasion history and estimating distribution patterns of *Lolium temulentum* and *Aegilops tauschii*. 14, ○
- 20 Prey resources are equally important as climatic conditions for predicting the distribution of a broad-ranged apex predator. **2023**, 29, 613-628 ○
- 19 Multiplexed ISSR Genotyping by Sequencing (MIG-Seq). **2023**, 403-414 ○
- 18 How useful is genomic data for predicting maladaptation to future climate?. ○
- 17 Climate-driven convergent evolution in riparian ecosystems on sky islands. **2023**, 13, ○
- 16 Climate-induced range shifts drive adaptive response via spatio-temporal sieving of alleles. **2023**, 14, ○
- 15 Historical demography and species distribution models shed light on past speciation in primates of northeast India. ○
- 14 Geographic Genetic Structure of *Alectoris chukar* in Türkiye: Post-LGM-Induced Hybridization and Human-Mediated Contaminations. **2023**, 12, 401 ○
- 13 The dynamics of the diversity–energy relationship during the last 21,000 years. **2023**, 32, 707-718 ○
- 12 Plant Species–Capacity for Range Shifts at the Habitat and Geographic Scales: A Trade-Off-Based Framework. **2023**, 12, 1248 ○
- 11 Global warming leads to habitat loss and genetic erosion of alpine biodiversity. **2023**, 50, 961-975 ○
- 10 Recent range shifts of moths, butterflies, and birds are driven by the breadth of their climatic niche. ○
- 9 Long-term effect of forest harvesting on boreal species assemblages under climate change. **2023**, 2, e0000179 ○
- 8 Delayed postglacial colonization of *Betula* in Iceland and the circum North Atlantic. ○
- 7 Predicting the Potential Distribution of the Endangered Plant *Eucommia ulmoides* in China under the Background of Climate Change. **2023**, 15, 5349 ○
- 6 Where and when local adaptation happens: lessons from the European barn owl (*Tyto alba*). ○

- 5 Possible species discrimination of a blotched nerite *Nerita albicilla* with their distribution pattern and demographic history in the Indo-Pacific. **2023**, 13, ○
- 4 The Distribution Pattern and Species Richness of Scorpionflies (Mecoptera: Panorpidae). **2023**, 14, 332 ○
- 3 Niches of three sympatric montane ground-dwelling squirrels: Relative importance of climate, topography, and landcover. **2023**, 13, ○
- 2 Identifying climatic drivers of hybridization with a new ancestral niche reconstruction method. ○
- 1 Managing forest genetic resources for an uncertain future: findings and perspectives from an international conference. **2023**, 19, ○
