

Prediction of the hydraulic diffusivity from pore size di

Cement and Concrete Research

35, 1724-1733

DOI: [10.1016/j.cemconres.2004.10.043](https://doi.org/10.1016/j.cemconres.2004.10.043)

Citation Report

#	ARTICLE	IF	CITATIONS
1	Characterization of Mineral Building Materials by Mercury-Intrusion Porosimetry. Particle and Particle Systems Characterization, 2006, 23, 20-28.	2.3	36
2	Size and Volume Relationship of Pore for Construction Materials. Journal of Materials in Civil Engineering, 2008, 20, 410-418.	2.9	23
3	Durability of sustainable concrete materials. , 2009, , 239-253.		4
4	Study on the microstructure of thin-layer facade plasters of thermal insulating system during artificial weathering. Construction and Building Materials, 2009, 23, 2559-2566.	7.2	16
5	Toward a better comprehension and modeling of hysteresis cycles in the water sorptionâ€“desorption process for cement based materials. Cement and Concrete Research, 2011, 41, 817-827.	11.0	73
6	Assessment of temperature gradient effects on moisture transfer through thermogradient coefficient. Building Simulation, 2012, 5, 107-115.	5.6	25
7	Implication of pore size distribution parameters on compressive strength, permeability and hydraulic diffusivity of concrete. Construction and Building Materials, 2012, 28, 382-386.	7.2	105
8	Determination of water permeability of cementitious materials using a controlled constant flow method. Construction and Building Materials, 2013, 47, 1488-1496.	7.2	69
9	Moisture diffusivity in mortars of different waterâ€“cement ratios and in narrow ranges of air humidity changes. International Journal of Heat and Mass Transfer, 2013, 56, 212-222.	4.8	18
10	Empirical Estimation of Pore Size Distribution in Cement, Mortar, and Concrete. Journal of Materials in Civil Engineering, 2014, 26, .	2.9	85
11	Wetting and Drying of Concrete: Modelling and Finite Element Formulation for Stable Convergence. Structural Engineering International: Journal of the International Association for Bridge and Structural Engineering (IABSE), 2014, 24, 192-200.	0.8	6
12	Bridging hydraulic diffusivity from aquifer to particle-size scale: a study on loess sediments from southwest Hungary. Hydrological Sciences Journal, 2015, 60, 269-284.	2.6	10
13	Numerical simulation of moisture transport in concrete based on a pore size distribution model. Cement and Concrete Research, 2015, 67, 31-43.	11.0	80
14	A new evolution model of concrete porosity under continuous hydration. International Journal of Modelling, Identification and Control, 2016, 26, 345.	0.2	4
15	Durability of sustainable construction materials. , 2016, , 397-414.		5
16	Dielectric characterization of concrete at high temperatures. Cement and Concrete Composites, 2016, 73, 54-61.	10.7	20
17	Moisture transport in cementitious materials. Periodic homogenization and numerical analysis. European Journal of Environmental and Civil Engineering, 2017, 21, 1026-1042.	2.1	3
