

CITATION REPORT

List of articles citing

Topological domains in mammalian genomes identified by analysis of chromatin interactions

DOI: [10.1038/nature11082](https://doi.org/10.1038/nature11082)
Nature, 2012, 485, 376-80.

Version: 2024-04-20

This report has been generated based on the citations recorded by exaly.com for the above article. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

- 28 Three-dimensional chromatin organization promotes genome evolution in a fungal plant pathogen.
- 27 Condensed but liquid-like domain organization of active chromatin regions in living human cells. **2023**, 9,

- 26 The regulatory genome and defects in monogenic diseases. **2023**, 275-302
- 25 Establishing and maintaining Hox profiles during spinal cord development. **2023**,
- 24 Structural changes in chromosomes driven by multiple condensin motors during mitosis. **2023**, 42, 112348
- 23 Chromatin conformation dynamics during CD4+ T cell activation implicates autoimmune disease-associated genes and regulatory elements.
- 22 A multilayered post-GWAS analysis pipeline defines functional variants and target genes for systemic lupus erythematosus (SLE).
- 21 Noncoding RNA-chromatin association: Functions and mechanisms. **2023**,
- 20 Toward cis-regulation in soybean: a 3D genome scope. **2023**, 43,
- 19 Disrupted chromatin architecture in olfactory sensory neurons: looking for the link from COVID-19 infection to anosmia. **2023**, 13,
- 18 Dynamic chromatin conformation and accessibility changes mediate the spatial-specific gene regulatory network in *Bombyx mori*. **2023**, 124415
- 17 The role of heterochromatin in 3D genome organization during preimplantation development. **2023**, 112248
- 16 Elevated enhancer-oncogene contacts and higher oncogene expression levels by recurrent CTCF inactivating mutations in acute T cell leukemia. **2023**, 42, 112373
- 15 Dynamic chromatin architectures provide insights into the genetics of cattle myogenesis. **2023**, 14,
- 14 Dynamic changes in P300 enhancers and enhancer-promoter contacts control mouse cardiomyocyte maturation. **2023**,
- 13 Single-cell DNA Methylome and 3D Multi-omic Atlas of the Adult Mouse Brain.
- 12 Biomarkers of aging.
- 11 CTCF is a DNA-tension-dependent barrier to cohesin-mediated loop extrusion.
- 10 The Smc5/6 complex is a DNA loop-extruding motor.
- 9 Cell Type-Specific Regulation by a Heptad of Transcription Factors in Human Hematopoietic Stem and Progenitor Cells.

- 8 Topologically associating domain boundaries are required for normal genome function. **2023**, 6,
- 7 3D genome mapping identifies subgroup-specific chromosome conformations and tumor-dependency genes in ependymoma. **2023**, 14,
- 6 Igh and Igk loci use different folding principles for V gene recombination due to distinct chromosomal architectures of pro-B and pre-B cells. **2023**, 14,
- 5 The local density of H3K9me3 dictates the stability of HP1 α condensates-mediated genomic interactions. **2023**,
- 4 Novel Chromatin Insulating Activities Uncovered upon Eliminating Known Insulators *in vivo*.
- 3 Competition between transcription and loop extrusion modulates promoter and enhancer dynamics.
- 2 Comparative three-dimensional genome architectures of adipose tissues provide insight into human-specific regulation of metabolic homeostasis. **2023**, 104757
- 1 When 3D genome changes cause disease: the impact of structural variations in congenital disease and cancer. **2023**, 80, 102048
