

CITATION REPORT

List of articles citing

Stoichiometry constrains microbial response to root exudation- insights from a model and a field experiment in a temperate forest

DOI: 10.5194/bg-10-821-2013
Biogeosciences, 2013, 10, 821-838.

Version: 2024-04-28

This report has been generated based on the citations recorded by exaly.com for the above article. For the latest version of this publication list, visit the link given above.

The third column is the impact factor (IF) of the journal, and the fourth column is the number of citations of the article.

18 Data_Sheet_1.pdf. **2018**,

17 Potential application of *Chlorella* sp. biomass cultivated in landfill leachate as agricultural fertilizer. *Archives of Agronomy and Soil Science*, 1-16 2

16 Responses of the rhizosphere microbiome to long-term nitrogen addition in a boreal forest. *Canadian Journal of Forest Research*, 1.9 0

15 Multifarious Responses of Forest Soil Microbial Community Toward Climate Change. *Microbial Ecology*, 4.4

14 Belowground Carbon Efficiency for Nitrogen and Phosphorus Acquisition Varies Between *Lolium perenne* and *Trifolium repens* and Depends on Phosphorus Fertilization. *Frontiers in Plant Science*, 13, 6.2 0

13 Long-Term Nitrogen and Straw Application Improves Wheat Production and Soil Organic Carbon Sequestration. *Journal of Soil Science and Plant Nutrition*, 3.2 0

12 Increasing nitrogen availability does not decrease the priming effect on soil organic matter under pulse glucose and single nitrogen addition in woodland topsoil. *Soil Biology and Biochemistry*, **2022**, 172, 108767 7.5 0

11 Interactive effects of citric acid and mineral fertilization on soil microbial carbon use efficiency in the rhizosphere of two coniferous species. **2022**, 112, 103428

10 A regional assessment of permanganate oxidizable carbon for potential use as a soil health indicator in managed pine plantations. **2022**, 521, 120423

9 Semi-continuous C supply reveals that priming due to N-mining is driven by microbial growth demands in temperate forest plantations. **2022**, 173, 108802 0

8 Global patterns of rhizosphere effects on soil carbon and nitrogen biogeochemical processes. **2023**, 220, 106661 0

7 Modelling the Rhizosphere Priming Effect in Combination with Soil Food Webs to Quantify Interaction between Living Plant, Soil Biota and Soil Organic Matter. **2022**, 11, 2605 0

6 Soil organic matter formation and loss are mediated by root exudates in a temperate forest. **2022**, 15, 1011-1016 1

5 CO₂ concentration and water availability alter the organic acid composition of root exudates in native Australian species. 0

4 Grass rather than legume species decreases soil organic matter decomposition with nutrient addition. **2023**, 177, 108936 0

3 Linking rhizosphere soil microbial activity and plant resource acquisition strategy. 0

- 2 Nitrogen deposition induces a greater soil C sequestration in the rhizosphere than bulk soil in an alpine forest. **2023**, 875, 162701 
- 1 Effects of nitrogen deposition on soil enzymatic activity and soil microbial community in a Mediterranean holm oak forest. **2023**, 430, 116354
