A new elliptic contour extraction method for reference

Citation Report

#	Article	IF	Citations
1	A Calibration Method for Laser Guided Robotic Manipulation for Industrial Automation. , 2018, , .		10
2	Introducing data analytics to the robotic drilling process. Industrial Robot, 2018, 45, 371-378.	1.2	7
3	An accurate and robust method for the measurement of circular holes based on binocular vision. Measurement Science and Technology, 2020, 31, 025006.	1.4	23
4	Calibration Methods for High Precision Robot Assisted Industrial Automation. , 2020, , .		1
5	A semi-supervised deep learning approach for circular hole detection on composite parts. Visual Computer, 2021, 37, 433-445.	2.5	11
6	Integrating laser profile sensor to an industrial robotic arm for improving quality inspection in manufacturing processes. Proceedings of the Institution of Mechanical Engineers, Part C: Journal of Mechanical Engineering Science, 2021, 235, 4-17.	1.1	5
7	Positioning variation synthesis for an automated drilling system in wing assembly. Robotics and Computer-Integrated Manufacturing, 2021, 67, 102044.	6.1	19
8	Pose and shape error control in automated machining of fastener holes for composite/metal wing-box assembly. Journal of Manufacturing Processes, 2021, 66, 101-114.	2.8	6
9	The state of the art of search strategies in robotic assembly. Journal of Industrial Information Integration, 2022, 26, 100259.	4.3	8
10	High-precision location for occluded reference hole based on robust extraction algorithm. Measurement Science and Technology, 2021, 32, 035021.	1.4	7
11	A novel accurate positioning method of reference hole for complex surface in aircraft assembly. International Journal of Advanced Manufacturing Technology, 0, , 1.	1.5	4
12	Neuromorphic vision based control for the precise positioning of robotic drilling systems. Robotics and Computer-Integrated Manufacturing, 2023, 79, 102419.	6.1	17
14	Intelligent Endoscopic Examination of Internal Openings for Drilling Quality Control. Lecture Notes in Networks and Systems, 2024, , 397-403.	0.5	0
