

Comparison between two genetic algorithms minimizing materials in a residential building

Journal of Building Performance Simulation

12, 224-242

DOI: [10.1080/19401493.2018.1501095](https://doi.org/10.1080/19401493.2018.1501095)

Citation Report

#	ARTICLE	IF	CITATIONS
1	Performance of a sequential versus holistic building design approach using multi-objective optimization. Journal of Building Engineering, 2019, 26, 100883.	1.6	15
2	Optimization of building fenestration and shading for climate-based daylight performance using the coupled genetic algorithm and simulated annealing optimization methods. Indoor and Built Environment, 2021, 30, 195-214.	1.5	13
3	Rethinking the concept of building energy rating system in Australia: a pathway to life-cycle net-zero energy building design. Architectural Science Review, 2022, 65, 42-56.	1.1	13
4	Contribution of energy efficiency standards to life-cycle carbon footprint reduction in public buildings in Chile. Energy and Buildings, 2021, 236, 110797.	3.1	23
5	Multiple Sclerosis Detection via Wavelet Entropy and Feedforward Neural Network Trained by Adaptive Genetic Algorithm. Lecture Notes in Computer Science, 2019, , 87-97.	1.0	5
6	BIMBOT-(Artificial intelligence applied to BIM design). EGE-Expresi3n Gr3fica En La Edificaci3n, 2020, , 45.	0.3	0
7	A whole building life-cycle assessment methodology and its application for carbon footprint analysis of U.S. commercial buildings. Journal of Building Performance Simulation, 2023, 16, 38-56.	1.0	2
8	Multi-objective optimization of ceiling-to-floor systems in timber buildings taking into account structural and HVAC related objectives. Journal of Building Engineering, 2023, 70, 106410.	1.6	0
