8	In this paper we report the results of a pragmatic retrospective study aiming to test the effectiveness of a mobile phone delivered ACT based AI conversational coaching platform. In the on-boarding measurement half of all participants reported a WHO-5 score of 40 or less, well below the cut-off point of 50, and an indicator of poor well-being. However, on the last measurement recorded for each user half of all participants indicated a score of 53 and above, indicating a change for the better and an overall <i>JMIR Formative Research</i> ,	2.5	0
